* It was believed at first to be *Daphne*, No. 41; and hence was called "*Pseudo-Daphne*," when E. Schubert proved it to be a new planet. It was not re-discovered by M. Goldschmidt till 1 Sept. 1862, when it received its present name, that of the Muse of Meditation.

† *Atropos* said to have been discovered by R. Luther, 24 April, 1869. Not observed since.

[Numbers 391 and following are uncertain, not having been verified.]

The rapid discovery of planetoids by photography, especially by Wolf and Charlois, in recent years, has caused much confusion in records, 1892–8.

PLANIMETER, a machine for measuring the area of any figure by the passage of a tracer round about its perimeter. *Amsler's* planimeter (in use for several years) was described at the British Association meeting at Brighton, Aug. 1872.

PLANING-MACHINE. One for wood was constructed by Bramah, about 1802; and one for iron by Joseph Clement in 1825.

PLANTAGENET,* House of, to which belonged fourteen English kings, from Henry II. 1154, to Richard III., 1485; see *England, Kings.*

PLANTATIONS, see *Trade.*

PLASSEY, in Bengal, India, the site of a battle fought between the British under Clive, and the Hindoos under Surajah Dowlah, 23 June, 1757; 68,000 men were vanquished by 1000 British and about 2000 sepoys. The victory laid the foundation of our empire in India.

PLASTER of Paris. Gypsum, sulphate of lime, used for moulds, statuary, &c., first found at Montmartre, near Paris, whence its name. The method of taking likenesses by its use was first discovered by Andrea del Verrochio, about 1466.

PLATA, LA, see *Argentine Republic.*

PLATÆA (Bœotia, N. Greece), site of the battle between Mardonius, commander of the army of Xerxes of Persia, and Pausanias, commander of the Lacedæmonians and Athenians, 22 Sept. 479 B.C.; the same day as the battle of Mycale. Of 300,000 Persians scarce 3000 escaped with their lives. The Grecian army, about 110,000, lost but few men. The Greeks obtained immense plunder, and were henceforth delivered from the fear of Persian invasions. Platæa, as an ally of Athens, was destroyed by the Thebans, 372; and rebuilt by Philip II. after his victory at Chæronea, 338.

PLATE. In England, plate, with the exception of spoons, was prohibited in public-houses by statute 8 Will. III. (1696). The celebrated Plate act passed in May, 1756. This act was repealed in 1780. The act laying a stamp-duty upon plate passed in 1784; see *Goldsmiths' Company.* By 17 & 18 Vict. c. 96 (1854), gold wares were allowed to be manufactured at a lower standard; but a later act excepted marriage rings.—The art of covering baser metals with a thin plate of silver, either for use or for ornament (PLATING), said to have been invented by a Birmingham spur-maker, who began with making the branches of a pair of spurs hollow, and filling the hollow with a slender rod of steel. He continued to make the hollow larger and the iron thicker, till at last he merely coated the iron spur with silver; see *Electrotype.*

Mr. Wilfred Joseph Cripps' "Old English Plate," a valuable work, containing the researches of Mr. O. Morgan, published, 1878. His "Old French Plate," 1880.

Duty on silver plate to be reduced gradually till abolished, from 1 June, 1881; abolished 17 April, 1890

"The Corporation Plate of England and Wales" (illustrated), by Mr. Jewitt and W. H. St. John Hope, published, 1895.

PLATE-WAYS, on ordinary roads for waggons carrying goods, proposed at Liverpool about 1880, to supersede railways for cheapness; not adopted.

PLATFORM, see *Public Meetings.*

PLATINUM, the heaviest of all the metals, except iridium. The name originated with the Spaniards on account of its silvery colour; *Plata* signifying silver. It was found in the auriferous sand of the river Pinto, in South America, and was unknown in Europe until 1741, when don Antonio Ulloa announced its existence in the narrative of his voyage to Peru. *Greig.* In its ore have been found the metals palladium, rhodium, osmium, iridium, and ruthenium (*which see*). Platinum was rendered malleable and ductile by Dr. Wm. Hyde Wollaston, whose processes are described in the Royal Society's Bakerian lecture for 1829. He died in 1828, having, it is said, gained 30,000*l.* by his inventions. In 1859, M. H. Ste.-Claire Deville made known a new method of obtaining platinum from its ore, in great abundance and purity; and at the international exhibition of 1862 was shown a mass worth 3840*l.*, weighing 266½ lb., of a metal hitherto considered infusible, obtained by his process, employing the oxy-hydrogen flame. See *Philosophical Lamp.*

Dodé's process for coating iron with platinum to preven rust, shown at Johnson & Matthey's, 11 Jan. 1879.

* Fulke Martel, earl of Anjou, having contrived the death of his nephew, the earl of Brittany, in order to succeed to the earldom, his confessor sent him, in atonement for the murder, to Jerusalem, attended by only two servants, one of whom was to lead him by a halter to the Holy Sepulchre, the other to strip and whip him there, like a common malefactor. Broom, in French *genet*, in Latin *genista*, being the only tough, pliant shrub in Palestine, the noble criminal was smartly scourged with it, and from this instrument of his chastisement he was called *Planta-genista*, or Plantagenet; other accounts are given. *Skinner* and *Mézéray.*

Platinotypes, photographic reproductions of pictures, by a peculiar process by Mr. F. Hollyer, specimens exhibited in the Dudley Gallery, Oct. 1892.

PLATONIC PHILOSOPHY, the most popular of all systems (see *Philosophy*). Plato's dialogues have been termed "Philosophy backed by example." He was a disciple of Socrates, 409 B.C., and died 347. The leading feature of his mind was comprehensiveness. The Cambridge Platonists included Whichcote, Cudworth, John Smith, Henry More.

Professor Jowett's popular translation of "Plato's Dialogues" published in 1871; 3rd edition, 1893.

PLATONIC YEAR, the period of time which the equinoxes take to finish their revolution, at the end of which the stars and constellations have the same place with regard to the equinoxes that they had at first. Tycho Brahe says that this year or period requires 25,816 common years to complete it; Ricciolus computes it at 25,920; and Cassini at 24,800; at the end of which time some imagined that there would be a total and natural renovation of the whole creation.

PLATTSBURG. A British expedition against this place, a town of New York, on Lake Champlain, was designed under general sir George Prevost, but was abandoned after the naval force of England had suffered a defeat in an engagement with the Americans, 11 Sept. 1814, when the British squadron in Lake Champlain was captured; see *United States*.

PLAY-GROUNDS. In 1858 a society was established by the earl of Shaftesbury and other benevolent persons to provide play-grounds for the recreation of adults and the children of the humble classes. Ground was liberally offered by the government, and by the marquis of Westminster and others; and in 1859 an act of parliament was passed to facilitate grants of lands for this purpose, for which part of Smithfield was to be reserved. The scheme was not successful.

The Metropolitan Public Garden, Boulevard, and Playground association formed by lord Brabazon (aft. earl of Meath) and others in 1882 has done good service in the east of London.

The London Playing-fields Association founded; very active in obtaining places, Feb. *et seq.* 1890–2.

Hackney marsh (337 acres), purchased by the London county council and others as a playground for east London, opened by sir John Hutton, 21 July, 1894.

PLAYS, see *Drama* and *Theatres*.

PLEADINGS. In the early courts of judicature in England, pleadings were made in the Saxon language; and in Norman-French from the period of the conquest in 1066 until 1362. Pleadings were ordered to be in English by 36 Edward III. 1362, and Cromwell extended the rule to all legal proceedings 1650. In English law the proceedings are the mutual statements of the plaintiff's cause of action, and the defendant's ground of defence.

PLEBEIANS, Plebes, or Plebs, the commons of Rome, as distinguished from the Patricians; see *Rome*, 494-366 B.C.

PLEBISCITUM, a term given to a law passed by the *comitia tributa*, an assembly of the Roman people in their tribes, first established in 491 B.C. The term has been recently revived in France and Italy, and applied to *Universal Suffrage* (*which see*).

PLOUGH. "Thou shalt not plough with an ox and an ass together." *Deut.* xxii. 10 (1451 B.C.). The Roman plough is minutely described by Virgil, about 31 B.C. Engines to plough grounds, whether inland or upland, were patented by David Ramsay and Thomas Wildgoose, in 1618; and many improvements in ploughs have been patented since. The application of steam power to ploughing was patented by John Upton in 1837, and by others since, more especially by lord Willoughby D'Eresby, the marquis of Tweeddale, and the earl of Caithness; see *Steam-Plough*.

PLOUGH MONDAY, in January, the first Monday after the Epiphany. It received the appellation from its having been fixed upon by our forefathers as the day upon which they returned to the duties of agriculture after enjoying the festivities of Christmas. *Ashe.* On Plough Monday, too, the ploughmen of the north country used to draw a plough from door to door and beg plough money to drink. *Bailey.*

On Plough Monday, the lord mayor of London holds annually at Guildhall a grand court of wardmote, at which the election of the common council and other officers on St. Thomas' day, 21 Dec., is confirmed.

PLUM. We have two native plums; our finer kinds came from Italy and Flanders about 1522. The *Diospyros Lotus*, the date plum, was brought from Barbary, before 1596; the Pishamin plum, *Diospyros virginiana*, from America, before 1629. Formerly damsons, apricots, and peaches went by this name, as raisins do to this day.

PLURALITIES. Clergymen have been restrained from holding more than one benefice by several statutes; the first being 21 Henry VIII. 1529. In 1838 an act was passed prohibiting the holding of more than two benefices except they were

at a distance less than ten miles; and the law on this subject was still further amended in 1850, 1855, and 1885, provisions being made for the amalgamation of neighbouring benefices. See *Electors*.

PLURAL NUMBER, see *We*.

PLUS (+) AND MINUS (—). Professor De Morgan attributes these signs to either Christopher Rudolf, who published a book on algebra about 1522, or Michael Stifelius, about 1544.

PLYMOUTH, a fortified seaport in Devonshire, originally Sutton, was incorporated as Plymouth in 1439. It was in 1588 the rendezvous of the English fleet of 120 sail under Howard, Drake, &c., which pursued the Spanish armada. The fine hotel and assembly-rooms were burnt 6 Jan. 1863; loss about 50,000*l*. The National Association for Social Science met here, Sept. 1872. PLYMOUTH BRETHREN, a body of Christians calling themselves "the Brethren," first appeared at Plymouth about 1830. In 1851 they had 132 places of worship in England and Wales. They object to national churches as too latitudinarian, and to other dissenters as too sectarian. They receive into communion all who confess Christ, and own the Holy Ghost as his vicar. Their doctrines agree with those of most evangelical protestant churches, but they recognise no order of ministers. Mr. Darby, regarded as their founder, afterwards separated from them with some adherents.

PNEUMATIC DESPATCH COMPANY, to convey letters and parcels through tubes by means of atmospheric pressure and a vacuum. The company's act was passed 13 Aug. 1859, and tubes were laid down in Threadneedle-street on 12 Sept. 1860; and on 20 Aug. 1861, successful experiments were performed at Battersea. In 1862 tubes were laid down from the Euston railway station to the N. W. post-office in Camden-town, and on 21 Feb. 1863, the conveyance of the mail-bags began. In Oct. 1865, tubes had been laid down between Euston railway and Holborn; and on 7 Nov. several persons travelled in them. Engineer, Mr. Rammell. The company stopped through insufficient support, 1876. A pneumatic tube by Siemens, employed to transmit telegraphic messages, began about Jan. 1871.

PNEUMATIC LOOM, in which compressed air is the motive power, invented by Mr. Harrison, was exhibited in London in Dec. 1864. A company was formed to bring it into general use. Pneumatic tyre company, see *Velocipede*, 1896.

POET-LAUREATE. Selden could not trace the precise origin of this office.

Warton, in his *History of English Poetry*, states that in the reign of Henry III. there was a *Versificator Regis*, to whom an annual stipend was first paid of 100*s*.
Chaucer, on his return from abroad, assumed the title of poet-laureate; and in the twelfth year of Richard II., 1389, he obtained a grant of an annual allowance of wine.
In the reign of Edward IV., John Kay was laureate; Andrew Bernard was laureate, *temp.* Henry VII.; and John Skelton, *temp.* Henry VIII.
James I. in 1615 granted to his laureate a yearly pension of 100 marks; and in 1630, this stipend was augmented by letters patent of Charles I. to 100*l*. per annum, with an additional grant of one tierce of Canary Spanish wine to be taken out of the king's store of wine yearly. We believe that on Southey's appointment the tierce of Canary wine was commuted for 27*l*.
Laurence Eusden commenced a series of Birth-Day and New Year's Odes, which continued till the death of Pye, in 1813.
On the death of Warton its abolition was recommended by Gibbon, whose elegant compliment on the occasion still more forcibly applied on Wordsworth's death, in 1850—"This is the best time for not filling up the office, when the prince is a man of virtue, and the poet just departed was a man of genius."

POICTIERS (W. France), near which was fought the battle between Edward the Black Prince and John, king of France, in which the English arms triumphed, 19 Sept. 1356. The standard of

France was overthrown, many of her nobility slain, and her king was taken prisoner, and brought to London; see *Tours*, and *Vouglé*.

POISONING. A number of Roman ladies formed a conspiracy and poisoned their husbands. A female slave denounced 170 of them to Fabius Maximus, who ordered them to be publicly executed, 331 B.C. It was said that this was the first public knowledge they had of poisoning at Rome. Poisoning was made petty treason in England, and was punished by boiling to death (of which there are some remarkable instances), 23 Henry VIII. 1531; see *Boiling to death*. The frequency of cases of poisoning by means of arsenic, in England, caused the British legislature to pass a law rendering the sale of arsenic difficult (14 Vict. c. 13, 6 June, 1851). The sale of poison is now regulated by the Pharmacy act of 1868. Additional restrictions by act passed in 1885. The *Poisoned Grain Prohibition Act* passed 28 July, 1863.

A deadly poison freely administered by Italians in the seventeenth century, was called *aqua tofana*, from the name of the woman Tofania, who made and sold it in small flat vials. She carried on this traffic for half a century, and eluded the police; but, on being taken, confessed that she had been a party in poisoning 600 people. Numerous persons were implicated by her, and many of them were publicly executed. All Italy was thrown into a ferment, and many fled, and some persons of distinction, on conviction, were strangled in prison. It appeared to have been chiefly used by married women who were tired of their husbands. Four or six drops were a fatal dose; but the effect was not sudden, and therefore not suspected. It was as clear as water, but the chemists have not agreed about its real composition. A proclamation of the pope described it as aquafortis distilled into arsenic, and others considered it as a solution of crystallised arsenic.

Between 1666 and 1676, the marchioness de Brinvilliers poisoned her father and two brothers and many others. She was executed, 16 July, 1676.

W. Palmer was executed in 1856, and Miss M. Smith tried in 1857, for poisoning; see *Trials*. Catherine Wilson, a noted poisoner, was executed on 20 Oct. 1862. Edward William Pritchard, M.D., was executed at Glasgow, 28 July, 1865, for the slow murder of his wife and her mother, by antimony.

Nov. 1858, 17 persons died at Bradford through eating sweetmeats in which arsenic had been mixed by mistake. Mr. Hodgson, a chemist, was tried for homicide, and acquitted.

Weltmann, a bookbinder at Posen, poisoned 4 wives and 2 children, about 1859.

Christiana Edmunds, of Brighton, was convicted of murdering a child by poisoned sweetmeats; other persons barely escaped (sentence remitted on the ground of insanity), 16 Jan. 1872.

Mary Ann Cotton, imprisoned Oct. 1872, suspected of poisoning 16 persons, principally children; convicted of poisoning her child, 7 March; executed at Durham, 24 March, 1873.

About 25 wives convicted of poisoning their husbands at Gross Bedskereh in Hungary; Theckla Popav was said to be the head of the conspiracy, Aug. 1882.

Catharine Flanagan and Margaret Higgins (sisters) convicted of poisoning Thomas Higgins, to obtain insurance money, 9 Feb.; other charges not tried; they confessed, and were executed, 3 March, 1884.

Mad. Van Der Linden convicted of many poisonings at Leyden, 3 May, 1885.

POLA (Illyria), a very ancient city, where Augustus founded the colony Pietas Julia, which flourished during the empire. Off Pola, the Genoese fleet, under Doria, defeated the Venetians under Pisani, 5 or 6 May, 1379, with great loss.

* On 22 Feb. 1846, an Austrian force under general Collin, which had entered Cracow on the approach of armed bands of peasantry, was attacked and driven out of the town. A provisional government was then proclaimed by the insurgents, and two days afterwards they crossed the Vistula, expecting to be joined by the peasantry of Gallicia, who were solicited by the nobles and clergy to strike a blow in the cause of liberty. The Austrian government, in order to prevent this junction, excited in the peasantry a suspicion of the motives of the nobles, and offered a reward for every noble delivered up, alive or dead: a general massacre of the nobility and clergy in the circle of Tarnow followed: the insurgents from Cracow were defeated at Gdow, whence they retreated to Podgorze, a suburb of Cracow; here they were attacked by general Collin, and driven into Cracow on the 27th of February. The forces of the three powers then began to concentrate on Cracow; the people in the town opened negotiations with the Austrians about a surrender, and while these were going on a Russian corps entered the town without resistance, and soon afterwards the revolution was at an end.

POLITICAL ECONOMY, the science which has for its object the improvement of the condition of mankind, and the promotion of civilisation, wealth, and happiness; was considered by Plato, Xenophon, and Aristotle. Its history in this country may be dated from the publication of sir Wm. Petty's "Treatise on Taxes," 1662, and "Political Arithmetic," 1691; Dr. Adam Smith's "Wealth of Nations," 1776. The works of J. S. Mill, M'Culloch, Malthus, Ricardo, Carey, Jevons, Sidgwick, Marshall, and Fawcett are celebrated. A professorship of Political Economy was established at Oxford by Mr. Henry Drummond, M.P., 1825; and at Cambridge, first by Mr. G. Pryme, in 1828; but regularly established by the university in 1863, Henry Fawcett (blind) being the first professor.

Archbishop Whately endowed a professorship at Trinity College, Dublin; Isaac Butt first professor. 1832

POLITICAL OFFICES PENSIONS ACT passed 9 Aug. 1869.

POLITICAL UNIONS were formed in England in 1831 to carry the Reform Bill; the most important was that of Birmingham.

POLITICIANS. A politician is described as a man well versed in policy, or the well regulating and governing of a state or kingdom; a wise and cunning man. A man of artifice; one of deep contrivance. *South.* The term was first used in France about 1569. A new faction appeared, known by the name of Politicians, headed by the duc d'Alençon and the Montmorencies, and strengthened by the accession of the Huguenots in 1574. The duke was arrested and the Montmorencies sent to the Bastile.

POLKA, a dance said to have been invented between 1830 and 1834 in Bohemia, and to have obtained its name in Prague in 1835. It became very popular, and was introduced into England about 1844.

POLL ACT passed in Ireland by the Junto of the Pale, putting a price upon the heads of certain Irish; the earl of Desmond being then deputy, 5 Edward IV. 1465. This act long endured, see *Ireland*, 1465.

POLLENTIA (Piedmont, N. Italy), the site of a great victory of Stilicho, the Imperial general, over Alaric the Goth, 29 March, 403.

POLL-TAX or CAPITATION TAX, existed among the ancient Romans. It was first levied in England in 1380; and occasioned the rebellion of Wat Tyler (see *Tyler*), 1381. It was again levied in 1513. By the 18th Charles II. every subject was assessed by the head, viz., a duke 100*l.*, a marquis 80*l.*, a baronet 30*l.*, a knight 20*l.*, an esquire 10*l.*, and every single private person 12*d.*, 1667. This grievous impost was abolished by William III. 1689.

POLLUTION OF RIVERS, see *Rivers.*

POLO, the game of ball termed hockey played on horseback, became popular in England in 1872, having been introduced from India. Games were played by lancers and life-guards at Woolwich, 16, 19 July, 1872. A polo club was formed, and international contests held; at Brighton one opened 3 Aug. 1878. Polo is said to have been an old Russian game, mentioned 1492 under the name of Chûgān, as brought from Persia.

POLOTSK (Russia). The French under marshal Oudinot were here defeated by the Russians under general Wittgenstein, 30 and 31 July, 1812; the next day, the Russians were defeated. After several smaller actions with various results, Polotsk was stormed by the Russians, and retaken Oct. 1812.

POLTOWA, see *Pultowa.*

POLYGAMY, &c., was permitted among the early nations, and now by Mahometans. In Media, it was a reproach to a man to have less than seven wives. Among the Romans, Marc Antony is mentioned as the first who took two wives. The practice was forbidden by Arcadius, 394. The emperor Charles V. punished polygamy with death. In England, by stat. 1 James I. 1603, it was made felony, with benefit of clergy. It was formerly punished with transportation, but now by imprisonment or penal servitude; see *Marriages.* Polygamy exists among the Mormons (*which see*). Abolished in the United States, 23 March, 1882.—POLYANDRY (where one woman has several husbands) is permitted in some eastern countries, the children having equal rights.

POLYGLOT, from two Greek words denoting "many languages," is chiefly applied to editions of the Bible in several languages.

Giustiniani published a polyglot psalter, 1576.

1. The Complutensian Polyglot, in six vols. folio, was printed at Alcala (Complutensis), in Spain, 1502-14; the first edition published in 1522, at the expense of the celebrated cardinal Ximenes, costing 250,000 ducats. Six hundred copies of it were printed; three on vellum. Count MacCarthy, of Toulouse, paid 483*l.* for one of these copies at the Pinelli sale.
2. The Polyglot, printed at Antwerp, by Montanus, 8 vols. folio, in 1559-69, at the expense of Philip II. of Spain.
3. Printed at Paris, by Le Jay, in 10 vols. folio, 1628-45.

ton, published 1606–22; a new edition, 3 vols., by the rev. Richard Hooper, was published 1876.

POLYPES, also named Hydræ (*many-footed* animals), on account of their property of reproducing themselves when cut in pieces, every part soon becoming a perfect animal; first discovered by Leeuwenhoek, and described by him in the *Philosophical Trans.* 1703. The polypes are of the order Zoophytes, and are partly animal and vegetable.

POLYTECHNIC INSTITUTION, ROYAL, Regent-street, London, was erected by Thompson in 1838, opened 6 Aug. 1839, and enlarged in 1848. It contained a hall of manufactures with machines worked by steam-power, lecture theatres, &c., diving-bell, electric machine, &c. *Timbs.* The institution did not prosper commercially, and its decline was hastened by the fall of a staircase on 3 Jan. 1859, when one person was killed and many injured. The institution was closed in May, 1859, but was re-opened by a new company on 12 Nov. 1860; see *Ecole Polytechnique.* Professor Pepper, the director for many years, resigned in 1872; returned, 1878. The classes were formed into a college, which was inaugurated by the earl of Shaftesbury, 7 Oct. 1872. Polytechnic institution announced to be closed on 27 Aug. 1881; affairs wound up. Plant sold for about 2000*l.* 23 March, 1882. In 1882 it was occupied by the Polytechnic young men's christian institute, principally by the instrumentality of Mr. Quintin Hogg, for educational purposes, with about 2000 members.

POMERANIA, a Prussian province, N. Germany, was held by the Poles, 980, and by Denmark, 1210; made an independent duchy, 1479; and divided between Sweden and Brandenburg, 1648. The Swedish part, awarded to Denmark in 1814, was given up to Prussia for Lauenburg, 1815; see *Denmark; Wrecks*, 1878.

POMFRET or PONTEFRACT (S. York). At the castle (built 1080), Richard II. was confined and murdered, 10 Feb. 1400. Some writers assert that Richard escaped and died in Scotland. In this castle also, the earl Rivers, lord Grey, sir Thomas Vaughan, and sir Richard Haut or Hause, were put to death by order of the duke of Gloucester, then protector of England (afterwards Richard III.) about 26 June, 1483. The castle, which had stood four sieges, was dismantled in 1649. The first parliamentary election by ballot took place here, 15 Aug. 1872, very quietly. It lost one of its two members in 1885. Population, 1881, 8,798; 1891, 9,702.

POMPEII (S. Italy), an ancient city of Campania, was partly demolished by an earthquake in A.D. 63. It was afterwards rebuilt, but was overwhelmed by an eruption of Vesuvius, accompanied by an earthquake, on the night of 24 Aug. 79. The principal citizens were then assembled in an amphitheatre where public spectacles were exhibited. The ashes buried the whole city and covered the surrounding country. After a lapse of fifteen centuries, a countryman, as he was turning up the ground, found a bronze figure; and this discovery led to further search, which brought numerous other objects to light, and at length the city was uncovered. The part first cleared was supposed to be the main street, 1750. The kings of Naples greatly aided in exploring Pompeii, and the present Italian government resumed the work in 1863.

A commemorative meeting of antiquaries and philosophers met at Pompeii, 25 Sept. 1879.
Further discoveries made, autumn 1882 *et seq.*
The remains of a handsome five-storied house were uncovered . . . . . July, 1890

POMPEY'S PILLAR stands about three-quarters of a mile from Alexandria, between the city and the lake Mareotis. The shaft is fluted, and the capital ornamented with palm-leaves; the whole, which is highly polished, composed of three pieces, and of the Corinthian order. The column measures, according to some, 94 feet; to others 141, and even 160 feet; but of its origin, name, use, and age, nothing is certain.

It is generally believed that the column has no reference to Pompey, to whom a mark of honour was, nevertheless, set up somewhere about this part. One supposes the edifice was dedicated to Vespasian, another to Severus; and Mr. Clarke, from a half-effaced inscription on the base, considered that Adrian is the person honoured; while many assert, from the same inscription, that it is dedicated "to Diocletian Augustus, most adorable emperor, tutelar deity of Alexandria."

PONDICHERRY (S.E. India), the capital of French India, and first settled by the French in 1674. At this place, near Amiens, took place a fierce indecisive conflict, lasting from 11 A.M. to 6 P.M., between the Germans under Manteuffel and the French army of the north under Faidherbe, 23 Dec. 1870. Both sides claimed a victory; the French general asserted that he remained master of the field.

PONTIFFS (Latin *Pontifices*), the highest Roman sacerdotal order, established by Numa. The college first consisted of 4 patricians, with a chief (Pontifex Maximus); to these 4 plebeians were added, by the Ogulnian law, 300 B.C. Sylla increased the number to 15 (8 *majores*, 7 *minores*), (81), and Julius Cæsar to 16. T. Coruncanius, a plebeian, obtained this office, 254 B.C.

POOR. The poor of England, till the time of Henry VIII., subsisted as the poor of Ireland until 1838, entirely upon private benevolence. By statute 23 Edw. III. 1349, it was enacted that none should give alms to a beggar able to work. By the common law, the poor were to be sustained by "parsons, rectors of the church, and parishioners, so that none should die for default of sustenance;" and by 15 Rich. II. impropriators were obliged to distribute a yearly sum to the poor; but no compulsory law was enacted till the 27th Hen. VIII. 1535. POOR CHILDREN'S AID SOCIETY, for providing food, clothing, &c., established 1887.

POOR KNIGHTS OF WINDSOR, or ALMS KNIGHTS. Soon after his institution of the order of the Garter, Edward III. founded this charity, for the provision of 24 (afterwards 26) poor persons eminent for military services. Edward IV. discharged the college from the support of the alms-knights, but Elizabeth re-established the charity for 13 knights, 1559. King William IV. changed the name to the "Military Knights of Windsor," in consequence of their all having held commissions in the army, Sept. 1833.—The "Naval Knights of Windsor" are maintained on a distinct foundation, under the bequest of Samuel Travers, 1724. The corporation was established in 1798. An act making lieutenants and widowers eligible was passed in 1867. Alterations made by act passed in 1885. An act to dissolve the corporation was passed in 1892.

POPE (from the Greek *Pappas* and *Papa*, a father or grandfather), considered by Romanists to be the visible chief of the church, the vicar of Jesus Christ, and the successor of St. Peter. He styles himself "servant of the servants of God." The title pope was formerly given to all bishops. It was first adopted by Hyginus, 139; and pope Boniface III. induced Phocas, emperor of the east, to confine it to the prelates of Rome, 606. By the connivance of Phocas also, the pope's supremacy over the Christian church was established; see *Italy*, *Reformation*, and *Rome, Modern*.

PORPHYROGENITUS, "born in the purple," a term applied to emperors of the east, born while their fathers were reigning.

PORT BRETON, an isle near New Caledonia, South Pacific.

In 1877 the marquis Du Breil de Rays purchased of the king Maragano a quantity of land on which to found a colony. Glowing prospectuses were issued in France, a company was formed, and, the scheme being favoured by the legitimists, a large number of shares were purchased and much money received. Other speculating companies were formed, and colonial government officers nominated. In spite of warning and prohibition several vessels sailed in 1879 with emigrants to meet with misery, disease, and, to a large extent, with death. A few who had been landed in New Caledonia got back to France and published an account of their sufferings. The marquis and some of his associates were brought to trial 27 Nov. 1883; he was sentenced to four years' imprisonment and a fine of 3000 francs, his associates to shorter imprisonment, 2 Jan. 1884; on appeal, sentence confirmed, 14 March, 1884.

PORTE, or SUBLIME PORTE, official name of the court of the sultan of Turkey. Mostasem, the last of the Abbasside caliphs (1243-58), fixed in the threshold of the principal entrance to his palace at Bagdad a piece of the black stone adored at Mecca, and thus this entrance became the "porte" by eminence, and the title of his court. The sultans, successors of the caliphs, assumed the title. —*Bouillet*.

PORTEOUS MOB. Capt. Porteous, at Edinburgh, on 15 April, 1736, commanded the guard at the executi n of Wilson, a smuggler, who had saved the life of a fellow criminal, by springing upon the soldiers around them, and by main force keeping them back, while his companion fled. This excited great commiseration, and the spectators pelted the guard with stones. Fearing a rescue, Porteous ordered his men to fire upon the mob, and seventeen persons were killed or wounded. He was found guilty of murder, 22 June, 1736; but the queen granted him a reprieve (the king being then in Hanover). The people, at night, broke open the prison, took out Porteous, and hanged him on a dyer's sign-post, in the Grass-market, 7 Sept. 1736. None of the rioters were ever detected.

PORTER. Dr. Ashe says that this malt liquor obtained its appellation on account of its having been drunk by porters in the city of London, about 1730. The number of licensed brewers in 1850, in England, was 2257; in Scotland, 154; and in Ireland, 96—total, 2507. On 17 Oct. 1814, at Meux's brewhouse two large vats of porter burst, destroying neighbouring houses. Several lives were lost; and the loss was between 8000 and 9000 barrels.

PORTERAGE ACT, regulating the charge for porterage of small parcels, passed 1799.

The Fellowship of Free Porters established in London in the 13th century, with exclusive privileges, relating to grain, &c., much reduced by the act of parliament of 1872, and the construction of docks. The institution was gradually dying out. After urgent demands and much delay, the distribution of the accumulated funds and property amongst the members was ordered by the rulers, 12 Oct. 1893. The fellowship disbanded by the court of common council, June, 1894.

Final payment of assets, 10,379*l*. 4*s*. 7*d*., distributed to 495 members, 18 Dec. 1894.

PORT HAMILTON, see *Corea*.

PORT JACKSON (New South Wales), thirteen miles north of Botany Bay, was so named by capt. Cook in 1770; see *Sydney*. Here the duke of Edinburgh was shot by O'Farrell, a Fenian, 12 March, 1868, but soon recovered. The assassin was hanged, 21 April.

PORTLAND CEMENT, first mentioned in a patent granted to Joseph Aspden, a bricklayer of Leeds, 1824. His son made the true cement at Northfleet. Its value as a building material was established by Mr. John Grant's tests, 1859-71. Portland cement concrete was used by Mr. E. A. Bernay in 1867.

PORTLAND ISLE (off Dorset), the English Gibraltar. Fortified before 1142. Portland castle was built by Henry VIII. about 1536. Off this

* Born 1738; became lord chamberlain, 1765; lord lieutenant of Ireland, 1782; premier, 1783; home secretary, 1794; lord president, 1801; premier again, 1807; died, 1809; when Mr. Spencer Perceval became premier.

peninsula a naval engagement commenced between the English and Dutch, 18 Feb. 1653, which continued for three days. The English destroyed eleven Dutch men-of-war and thirty merchantmen. Van Tromp was admiral of the Dutch, and Blake of the English.—Here is found the noted freestone used for building our finest edifices. The Portland lights were erected 1716 and in 1789. The pier, with nearly half a mile square of land, was washed into the sea in Feb. 1792. Prince Albert laid the first stone of the Portland breakwater, 25 July, 1849, and the last stone was laid by the prince of Wales, 10 Aug. 1872. Mr. James Rendel, the first chief engineer, was succeeded on his death in 1856 by Mr. (aft. sir) John Coode. The breakwater and other harbour works cost 1,033,600*l.* exclusive of convict labour. The Portland prison was established in 1848. A mutiny among the convicts here in Sept. 1858, was promptly suppressed.

PORTLAND (or BARBERINI) VASE. This beautiful specimen of Greek art (composed of a glass-like substance, with figures and devices raised on it in white enamel; height 10 inches; diameter in the broadest part, 7; with a handle on each side) was discovered about the middle of the 16th century, in a marble sarcophagus in a sepulchre at a place called Monte del Grano, about 2½ miles from Rome. The sepulchre was supposed to have been that of the Roman emperor, Alexander Severus (222-235), and his mother Mammæa, and the vase is supposed to have been the cinerary urn of one of these royal personages. It was placed in the palace of the Barberini family, at Rome, where it remained till 1770, when it was purchased by sir William Hamilton, from whose possession it passed to that of the duchess of Portland, 1787; at the sale of her effects, it is said to have been bought by the then duke of Portland, who, in 1810, deposited it (on loan) in the British Museum. On 27 Feb. 1845, this vase was smashed to pieces with a stone by a man named William Lloyd; it has been skilfully repaired, and is now shown to the public in a special room. Josiah Wedgwood made a mould of it, and took a number of casts.

PORT MAHON, see *Minorca*.

PORTO BELLO (S. America), discovered by Columbus, 2 Nov. 1502, was taken by Morgan the Buccaneer in 1668; by the British under admiral Vernon, from the Spaniards, 21 Nov. 1739, and the fortifications destroyed. Before the abolition of the trade by the galleons, in 1748, it was the great mart for the rich commerce of Peru and Chili.

PORTO FERRAJO, capital of Elba (*which see*); built and fortified by Cosmo I. duke of Florence, in 1548. The fortifications were not finished till 1628, when Cosmo II. completed them with great magnificence; see *France*.

PORTO NOVO (S. India). Here sir Eyre Coote, with about 9500 men and 55 light field-pieces, skilfully defeated Hyder Ali, ruler of the Carnatic, with 80,000 men and some heavy cannon, 1 July, 1781. Hyder lost about 10,000, the British 587 killed and wounded. PORTO NOVO, W. Africa, a French settlement on the coast of Dahomey, *which see* (1890 *et seq.*).

PORTO RICO, a West India island, belonging to Spain; discovered by Columbus in 1493. Attacks on it by Drake and Hawkins repulsed, 1595. Revolt suppressed, 1823. Slavery abolished, 23 March, 1873.

PORT PHILLIP (New S. Wales), original name of the colony of Victoria (*which see*).

PORTRAIT GALLERY &c., see *National Portrait Gallery*, and *Composite Portraits*.

The Society of Portrait Painters held its first exhibition at the Institute of Painters in Water Colours in Piccadilly, July 1891. The society includes the most eminent artists. Second exhibition . . . . . June, 1892

The formation of a "British Museum of Portraits" (photographs), was proposed by Mr. James Glaisher in 1864, and partly begun. The undertaking resumed mainly by the exertions of Mr. Glaisher and the Amateur Photographic Association, and a collection of portraits deposited in the art department at South Kensington museum, July, 1891

PORTREEVE (derived from Saxon words signifying the governor of a port or harbour). The chief magistrate of London was originally so styled; but Richard I. appointed two bailiffs and afterwards London had mayors. *Camden;* see *Mayors*.

PORT ROYAL (N. America), capital of the French colony, Acadie, founded in 1604; after having been taken and restored several times, it was finally acquired by the British in 1710, and named Annapolis.

PORT ROYAL (Jamaica), once a considerable town, was destroyed by earthquakes in 1602 and 1692; laid in ashes by fire in 1702; reduced to ruins by an inundation of the sea in 1722; and destroyed by a hurricane in 1774. After these calamities, the custom-house and public offices were removed to Kingston. Port Royal was again greatly damaged by fire in 1750; by another awful storm in 1784; and by a devastating fire in July, 1815 in 1850 it suffered by cholera.

PORT ROYAL DES CHAMPS (near Paris) was a French Cistercian convent, founded by Odo, bishop of Paris, at the wish of king Philip Augustus, 1204. Having fallen into decay, it was revived and reformed in 1608 by Angelica Arnauld. In 1625 the increased community removed to Paris. The Port Royal des Champs, in 1656, became the retreat of the Arnaulds, Tillemont, Pascal, Lancelot, and other eminent Jansenists, who devoted themselves to education, and produced the Port Royal grammars, logic, and other works. This institution was condemned by the pope in 1709, and the buildings were pulled down, and tombs desecrated, by the order of Louis XIV., in 1710. The Port Royal at Paris was suppressed, with other monasteries, in 1790.

PORTUGAL, the ancient Lusitania. The present name is derived from Porto Callo, the original appellation of Oporto. After a nine years' struggle, under Viriathes, a brave able leader, the Lusitanians submitted to the Roman arms about 137 B.C. Portugal underwent the same changes as Spain on the fall of the Roman empire. There are in Portugal two universities, that of Coimbra, founded in 1308, and the smaller one of Evora, founded in 1533. Lisbon has also its royal academy, and the small town of Thomar has an academy of sciences; but, in general, literature is at a low ebb in Portugal. The poet Camoens, called the Virgil of his country, and author of the *Lusiad* (1569), translated into English by Mickle, was a native of Lisbon. POSITIVE PHILOSOPHY set forth by Auguste Comte, an eminent mathematician, born 19 Jan. 1798; died at Paris, 5 Sept. 1857, succeeded by M. Pierre Laffitte as director of Positivism. M. P. Emile Littré, the great French philologist, ardently embraced the system, and published "De la Philosophie Positive," in 1845.—See *Calendar*.

Comte's "Cours de Philosophie Positive," published 1830-42; "Système de Politique Positive, ou Traité de Sociologie, instituant la Religion de l'Humanité (l'amour pour principe, l'ordre pour base, et le progrès pour but)," 1851-4.
It professes to base itself wholly on positive facts or observed phenomena, and rejects all metaphysical conceptions, which it considers negatives, having nothing real or true in them; and dispenses with the science of mind. It sets aside theology and metaphysics as two merely preliminary stages in life; and abandons all search after causes and essences of things, and restricts itself to the observation and classification of phenomena and the discovery of their laws. Comte asserted that Europe had now arrived at the third stage of its progress.
Positivism does not recognise the supernatural or the future state.
The Society of Positivists in London meet in Newton-hall, in Fleur-de-Lys-court, near Gough-square, on Sunday evenings, when discourses on philosophy, morality, science, politics, &c., are delivered. Their professed object is to promote the perfection of man by means of education in its widest sense, aiming at the attaining of universal brotherhood independently of all professed religious sects; concerts are occasionally given; Frederick Harrison, president (*Pall Mall Gazette*, 29 Nov. 1883).
"The Church of Humanity" is a modified form of positivism, described by Mr. Richard Congreve (*Pall Mall Gazette*, 17 Jan. 1884).

Posting was fixed by statute of Edward VI. at one penny per mile, 1548. In England, in the reign of Edward IV. 1481, riders on post-horses went stages of the distance of twenty miles from each other, in order to procure the king the earliest intelligence of the events that passed in the course of the war that had arisen with the Scots.—*Gale.* Richard III. improved the system of couriers in 1483. In 1543 similar arrangements existed in England.—*Sadler's Letters.* Post communications between London and most towns of England, Scotland, and Ireland, existed in 1635.—*Strype.*

The alkalies and earths had been previously regarded as simple substances. Potassium ignites on contact with moisture.

POTATOES, natives of Chili and Peru, generally considered to have been brought to England from Santa Fé, in America, by sir John Hawkins, 1565. Others ascribe their introduction to sir Francis Drake, in 1586; their general introduction, 1592. Their first culture in Ireland is referred to sir Walter Raleigh, who had large estates in that country, about Youghal, in the county of Cork. It is said that potatoes were not known in Flanders until 1620. A fine kind of potato was first brought from America by Mr. Howard, who cultivated it at Cardington, near Bedford, 1765; and its culture became general soon after. The *failure of the potato crop* in Ireland, several years, especially in 1846, caused famine, to which succeeded pestilent disease of which multitudes died; among them many priests

and physicians. Parliament voted ten millions sterling; and several countries of Europe, and the United States of America, forwarded provisions and other succours; see *Ireland*. In 1868 it was reported that in England and Wales 500,000 acres, and in Ireland 1,000,000 acres, were under cultivation for potatoes. Potato disease prevailed greatly in England, autumn of 1872. In consequence the value of potatoes imported in 1872 was 1,654,240*l.*; in 1871, only 225,732*l.*; in 1877, 7,964,840 cwt., value, 2,348,749*l.*; in 1883, 5,149,509 cwt., value 1,585,260*l.*; in 1887, 2,763,357 cwt.; in 1888, 2,383,807 cwt.; in 1889, 1,864,426 cwt.; in 1890, 1,940,100 cwt. (ch. xviii.) Earthenware was made by the ancient Egyptians, Assyrians, Greeks, Etruscans, and Romans.

PRÆMONSTRATENSIAN ORDER, or WHITE CANONS, founded in 1120 by Norbert, a monk, at Pré Montré, near Laon. Its first house in England was founded by Peter de Gousla or Gousel, at Newsham, in Lincolnshire, 1143—*Tanner;* according to others in 1146. The order spread widely through England soon after. The house at Newsham was dedicated to St. Mary and St. Martial.—*Lewis*.

PRÆMUNIRE, LAW OF. This law (which obtained its name from the first two words "*Præmoneri*," or "*Præmuniri facias*," "Cause to be forewarned," which is applied to any offence in the way of contempt of the sovereign or his government) derived its origin from the aggressive power of the pope in England. The offence introduced a foreign power into the land, and created an *imperium in imperio*. The first statute of Præmunire was enacted 35 Edward I. 1306.—*Coke*. The pope bestowed most of the bishoprics, abbeys, &c., before they were void, upon favourites, on pretence of providing the church with better qualified successors before the vacancies occurred. To put a stop to these encroachments, Edward III. enacted a statute in 1353. The statute commonly referred to as the statute of Præmunire is the 16th of Richard II. 1392. Several similar enactments followed. The assertion that parliament is independent of the sovereign was declared a *præmunire*, 1661.

PRÆTORIAN GUARDS, instituted by the emperor Augustus (13 B.C.); their numbers enlarged by Tiberius, Vitellius, and their successors. At first supporters of the imperial tyrants, they eventually became their masters, actually putting up the diadem for sale (as in March, 193 A.D., when it was bought by Didius Julianus). They committed many atrocities, and were finally disbanded by Constantine in 312.

PRÆTORS, Roman magistrates, afterwards termed consuls (*which see*), were elected at the establishment of the republic, 509 B.C. In 366 the *prætor urbanus* was appointed for the city, and the *prætor peregrinus* for foreigners, 246 B.C. Two prætors were appointed for the provinces, 227, and two more, 197. Sylla, the dictator, added two, and Julius Cæsar increased the number to 10, which afterwards became 16. After this, their number fluctuated, being sometimes 18, 16, or 12; till, in the decline of the empire, their dignity decreased, and their numbers were reduced to three.

PREDESTINATION (*Ephes.* i.). The doctrine concerning this is defined in the seventeenth article of the Church of England (*Ephes.* i. and *Romans* ix.). It was maintained by St. Augustin, and opposed by Pelagius, in the early part of the 5th century. In later times it has been maintained by the Augustinians, Jansenists, the church of Scotland, and many dissenters (termed Calvinistic), and opposed by the Dominicans, Jesuits, and dissenters (termed Arminian), especially by the Wesleyan methodists.

PREHISTORIC ARCHÆOLOGY began in Sweden, and first systematised by Mr. Nillson. Daniel Wilson's "Archæology and Pre-historic Annals of Scotland," published 1851. An international congress for treating prehistorical subjects met at Neuchâtel in 1866, and at Paris in 1867. At the third meeting at Norwich, Aug. 1868, it assumed the name of "International Congress for Prehistoric Archæology," and published its transactions in 1869. A meeting was held at Stockholm 7-14 Aug. 1874. See *Barrows*, *Man*, *Ancient Monuments* and *Lake Dwellings*.

Sir John Lubbock divides prehistoric archæology into four great epochs: 1. The Drift or Palæolithic or old stone age; 2. The Neolithic or polished stone age; 3. The Bronze age; 4. The Iron age, when bronze was superseded.—(1880.)

PRE-RAPHAELITE SCHOOL, a name given about 1850, to J. E. Millais, Wm. Holman Hunt, D. G. Rossetti, and other artists, who opposed the routine conventionality of academic teaching, and resolved to study nature as it appeared to them, and not as it appeared in the antique. For a short time they published "The Germ, or Art and Poetry," beginning in 1850. Their works have been much criticised, but their influence has been beneficial. Their principles are much advocated by the great art-critic, John Ruskin.

PREROGATIVE COURT, in which formerly all wills were proved, and all administrations taken, which belonged to the archbishop of Canterbury by his prerogative, a judge being appointed by him to decide disputes.* Appeals from this court, previously to the pope, were commanded to be made to the king in chancery, 1533; to the privy council in 1830-2. This court was abolished, and the *Probate Court* established in 1857. Sir John Dodson, the last judge, died in 1858.

PREROGATIVE, ROYAL. In England the sovereign is the supreme magistrate, and it is a maxim that he *can do no wrong*. He is the head of the established church, of the army and navy, and the fountain of office, honour, and privilege, but is subject to the laws, unless exempted by name. The royal prerogatives were greatly exceeded by several despotic sovereigns, such as Elizabeth, James I., and Charles I. Elizabeth used the phrase "We, of our Royal prerogative, which we will not have argued or brought in question" (1591). James I. told his parliament "that as it was blasphemy to question what the Almighty could do of His power, so it was sedition to inquire what a king could do by virtue of his prerogative." These extreme doctrines were nullified by the revolution of 1688, and the exercise of the prerogative is now virtually subject to parliament; see *Lords*.

PRESBURG, the ancient capital of Hungary, where the diets were held and the kings crowned. On 26 Dec. 1805, a treaty was signed between France and Austria, by which the ancient states of Venice were ceded to Italy; the principality of Eichstadt, part of the bishopric of Passau, the city of Augsburg, the Tyrol, all the possessions of Austria in Suabia, in Brisgau, and Ortenau, were transferred to the elector of Bavaria, and the duke of Würtemberg, who, as well as the duke of Baden, were then created kings by Napoleon. The independence of the Helvetic republic was also stipulated. A new iron and stone railway and passenger bridge over the Danube was inaugurated by the emperor, 30 Dec. 1890. Population, 1890, 52,444.

PRESBYTERIANS are so called from their maintaining that the government of the church appointed in the New Testament was by presbyteries, or association of ministers and ruling elders, equal in power, office, and in order. "The elders (Greek, *presbyteros*) I exhort, who am also an elder (*sympresbyteros*)." 1 Peter v. 1. Presbyterianism was accepted by parliament in place of episcopacy in England in 1648, but set aside at the restoration in 1660. It became the established form of church government in Scotland in 1696. Its tenets were embodied in the formulary of faith

* The records date from 1383; but the testamentary jurisdiction from that year to 1433 was exercised by the court of arches. Then abp. Stafford transferred it to a new court; president, the commissary of the prerogative court of Canterbury. There was also a prerogative court of the archbishop of York.

said to have been composed by John Knox, in 1560, which was approved by the parliament, and ratified, 1567, and finally settled by an act of the Scottish senate, 1696, afterwards secured by the treaty of union with England in 1707. The first Presbyterian meeting-house in England was established at Wandsworth, Surrey, 20 Nov. 1572.

PRESS ASSOCIATION (a company "limited") was established by the newspaper proprietors of London and the provinces, at a meeting at Manchester, 29 June, 1868, to make arrangements to enable them to avail themselves of the increased facilities for the speedy transmission of news afforded by the post office, in consequence of the purchase of the rights of all the telegraph companies, authorised by the Telegraph Act of 1868. The organisation of the association was completed at a meeting in London, 3 March, 1869. The Provincial Newspaper Society, out of which it sprang, was founded in 1836, and became the Newspaper Society in 1889. Since 1868 the number of good daily provincial newspapers, containing the latest news of the world, has very greatly increased. Foreign press association registered as a society, March, 1898.

PRESS, LIBERTY OF THE. The *imprimatur* "let it be printed" was much used on the title-pages of books printed in the sixteenth and seventeenth centuries. The liberty of the press was severely restrained, and the number of master-printers in London and Westminster limited by the Star Chamber, 13 Charles I., July 1, 1637. John Milton published his noble work, "Areopagitica; or, a Speech for the Liberty of Unlicensed Printing," 1644. See *Fourth Estate*.

PRESTON (Lancashire). Near here Cromwell totally defeated the royalists under sir Marmaduke Langdale, 17 Aug. 1648. Preston was taken in 1715 by the Scotch insurgents, under Forster, who proclaimed king James VII. They were defeated in a battle on 12, 13 Nov. by generals Willes and Carpenter, who with the royal army invested Preston on all sides. The Scots laid down their arms, and their nobles and leaders were secured; some were shot as deserters, and others sent to London pinioned and bound together, to intimidate their party.—The stoppage of the cotton manufacture in 1861 and 1862, through the civil war in America, occasioned great suffering in Preston. See *Population*.

"*The Preston guild Merchant festival*," said to have been instituted in Saxon times, recorded as beginning 1328, and to have been kept once in 20 years regularly since 1562, was duly celebrated in Sept. 1862, and Sept. 1882

PRIEST (derived from *presbyteros*, elder), in the English church the minister who presides over the public worship. In *Gen.* xiv. 18, Melchizedek king of Salem is termed "priest of the most high God." (1913 B.C.; see *Hebrews* vii.) The Greek *hiereus*, like the Jewish priest, had a sacrificial character, which idea of the priesthood is still maintained by the Romanists and those who favour their views. Among the Jews, the priests assumed their office at the age of thirty years. The dignity of high or chief priest was fixed in Aaron's family, 1491 B.C. After the captivity of Babylon, the civil government and the crown were superadded to the high priesthood; it was the peculiar privilege of the high priest, that he could be prosecuted in no court but that of the great Sanhedrim. The heathens had their arch-flamen or high priest, resembling the Christian archbishop. For "Priest in Absolution," see *Holy Cross*.

A book so named from the Romish book of devotions, and formerly set forth or published by authority, as the first book children should publicly learn or read in schools, containing prayers and portions of the scripture. PRIMOGENITURE, Right of. A usage brought down from the earliest times. In some parts of England, by the ancient customs of gavel-kind and borough-English, primogeniture was superseded. It came in with the feudal law, 3 Will. I. 1068. The rights of primogeniture abolished in France, 1790. "Primogeniture," by Mr. Evelyn Cecil, published Feb. 1895.

PRINTING. Block printing is said to have been invented by the Chinese about 593 A.D., movable types made in the 10th century. The honour of first printing with single types in Europe has been appropriated to Mentz, Strasburg, Haarlem, Venice, Rome, Florence, Basle, and Augsburg; but the names of the three first only are entitled to attention; the early history is very doubtful, and the subject of much controversy; see *Press*.

Adrian Junius awards the honour of the invention to Laurenzes John Koster, of Haarlem, "who printed with blocks, a book of images and letters, *Speculum Humanæ Salvationis*, and compounded an ink more viscous and tenacious than common ink, which blotted, about 1438."

[The leaves of this book, being printed on one side only, were afterwards pasted together.]

[In 1859, Mr. Samuel Leigh Sotheby issued an elaborate work compiled by his father and himself, entitled "*Principia Typographica*," containing fac-similes, &c., of the block-books of the 15th century; and Mr. J. Russell Smith published a fac-simile of the *Biblia Pauperum*, a very early block-book.]

PRINTING-MACHINES.—William Nicholson, editor of the *Philosophical Journal*, first projected (1790-1), but Mr. König first contrived and constructed a working printing machine, which began with producing the *Times* of 28 Nov. 1814, a memorable day in the annals of typography.
In 1818, Mr. E. Cowper patented improvements.*
König's machine printed 1800 an hour on one side; Cowper's improvements increased this number to 4200. This was raised to 15,000, by Mr. Applegath's machine, which printed the *Times*.
Hoe's American machine, introduced into London 1858, prints 20,000 an hour.
Marinoni's machine at Paris said to print 36,000 an hour; Dec. 1868.
Walter press, invented for the *Times* by J. C. Macdonald and Mr. Calverley, between 1862-9, prints about 17,000 an hour *perfected*; 1872.
American Campbell press said to print 50,000 sheets perfected in an hour, Feb. 1876.
Ingram web rotary machine, invented by Mr. W. J. Ingram, M.P., for printing illustrated papers; first used to print *Illustrated London News*, 4 Oct. 1877.
PRINTING IN COLOURS was first commenced by the employment of several blocks, to imitate the initial letters in MSS. (for instance, the Mentz Psalter of Fust, 1455, which has a letter in three colours). Imitations of chiaroscuro soon followed ("Repose in Egypt," engraving on wood after Louis Cranach, in 1519, in Germany; others by Ugo da Carpi, in Italy, 1518).
J. B. Jackson (1720-54) attempted, without success, to imitate water-colour drawings, and to print paper-hangings.
About 1783, John Skippe, an amateur, printed some chiaroscuros.
In 1819-22, Mr. William Savage produced his remarkable work, "Hints on Colour Printing," illustrated by imitations of chiaroscuro, and of coloured drawings, giving details of the processes employed.
In 1836, Mr. George Baxter produced beautiful specimens of Picture-Printing, and took out a patent, which expired in 1855. In some of the illustrations to the "Pictorial Album" (1836), he employed twenty different blocks.
It has been applied to Lithography (hence Chromolithography).
In 1849, Mr. G. C. Leighton produced imitations of water-colour drawings, by means of modifications and improvements of Savage's processes. In 1851 he commenced colour-printing by machinery, and has since availed himself of aqua-tinted plates, and also of electrotyped silver and copper surfaces to obtain purity of colour as well as durability; Mr. Leighton died, 8 May, 1895.
The large coloured prints of the *Illustrated London News* were first issued in Dec. 1856.
Mr. E. Meyerstein explained his process of printing many colours at one impression (stenochromy), Society of Arts, 13 Dec. 1876.
Printing surfaces. Vulcanised india-rubber was first employed for this purpose by Mr. John Leighton, F.S.A., about 1862, and patented in the name of Alfred Leighton, 1864. The application is much used for hand-stamps for books, &c.
Mr. Fred Wicks' type-casting machine (cheap), reported *Times*, 19 Nov. 1896.
PRINTING EXHIBITION (of specimens, apparatus, materials, stationery, and machinery), at Agricultural Hall, London, include 5-17 July, 1880; 14 July *et seq.* 1881; and 30 July *et seq.* 1883.
International exhibition of printing at Stationers' hall, London, opened by the lord mayor, 14 Oct. 1889.

* In 1817 was published Blumenbach's Physiology by Elliotson, the first book printed by machinery. The machine employed was König's, one which printed both sides in one operation at the rate of 900 sheets an hour (1816).

PRIORIES, at first dependent on the great abbeys, are mentioned in 722 in England; see *Abbeys*, and *Monasteries*. *Alien priories* were seized by the king (Edward I.) in 1285, and in succeeding reigns on the breaking out of war with France; but were usually restored on the conclusion of peace. These priories were dissolved, and their estates vested in the crown, 3 Henry V. 1414.—*Rymer's Fœdera*.

PRIVATE BILLS, see *Acts of Parliament.*

PRIVATEER, a ship belonging to private individuals, sailing with a licence (termed a *Letter of Marque*), granted by a government in time of war, to seize and plunder the ships of the enemy. The practice, said to have been adopted by Edward I. against the Portuguese in 1295, was general during the war between Spain and the Netherlands in the 17th century, and during the last French war. Privateering was abolished by the great sovereigns of Europe by treaty, 30 March, 1856. The United States government refused to agree unless the right of blockade was also given up. The British government declined this, asserting "that the system of commercial blockade was essential to its naval supremacy." On 17 April, 1861, Jefferson Davis, president of the southern confederacy, announced his intention of issuing letters of marque, and on the 19th president Lincoln proclaimed that all southern privateers should be treated as pirates. This decree was not carried out: see *United States.* All the great powers forbade privateering during the American civil war (*which see*). By the treaty of Washington privateering was prohibited; and April, 1898, in relation to the Spanish-American war, a Spanish decree maintains liberty of action.

PRIVILEGED PLACES, see *Asylums.*

PRIVY COUNCIL. A council said to have been instituted by Alfred, 895. The number of the council was about twelve when it discharged the functions of state, now confined to the members of the cabinet; but it had become of unwieldy amount before 1679, in which year it was remodelled upon sir William Temple's plan, and reduced to thirty members: Anthony Ashley, earl of Shaftesbury, being president. The number is now unlimited. To attempt the life of a privy councillor in the execution of his office was made capital, occasioned by Guiscard's stabbing Mr. Harley while the latter was examining him on a charge of high treason, 9 Anne, 1711.

"The Proceedings and Ordinances of the Privy Council of England from 10 Richard II. to 33 Hen. VIII., edited by sir H. Nicolas, 7 vols," were published by the record commissioners, 1834–7.

IV., c. 41, 1833; amended by other acts in 1844, 1851, 1852.

Judges.—The lord president, lord chancellor, master of the rolls, vice-chancellor, lords justices in appeal, lord chief justice of the queen's bench and common pleas, lord chief baron, judges of the courts of bankruptcy, probate, and admiralty, and others appointed by the queen. In consequence of the increase of business, and consequent delay, the queen was empowered to appoint four new judicial members of the committee, by 34 & 35 Vict. c. 91 (21 Aug. 1871). The attorney-general, sir R. Collier, was made a judge of the Common Pleas, 7 Nov., and a member of the judicial committee 22 Nov. 1871.

These proceedings were considered contrary to the spirit of the act by several judges and the legal profession generally. A vote of censure on the Gladstone ministry was negatived in the house of lords (89-87), 15 Feb.; in the commons (268-241), 19 Feb. 1872.

PRIVY SEAL, the Lord, the fifth great officer of state, has the custody of the privy seal, which he must not put to any grant, without good warrant under the king's signet. This seal is used by the king to all charters, grants, and pardons, signed by him before they come to the great seal. Richard Fox, bishop of Winchester, held this office in the reign of Henry VIII. previously to 1523, when Cuthbert Tunstall, bishop of London, was appointed. The privy seal has been on some occasions in commission.—*Beatson.* See under *Liverpool, Canning, Wellington,* and succeeding *Administrations.*

PROBABILITY, Theory of (termed by Butler, "the guide of life"; by Laplace, "good sense reduced to calculation"), was originated by

Pascal, and taken up by Fermat, in their correspondence in 1654.

Its object is "the determination of the number of ways in which an event may happen or fail, in order that we may judge whether the chances of its happening or failing are greater."—*Jevons.*

It has been treated upon by the most eminent mathematicians, viz., the Bernouillis, De Moivre, D'Alembert, Euler, Lagrange, Laplace, and Quetelet.

On his death, sir James P. Wilde (aft. lord Penzance) was appointed judge, 28 Aug. 1863; see *Supreme Court.* The president of the probate, divorce, and admiralty division, sir James Hannen (1872), succeeded by sir Charles P. Butt, Jan. 1891 (died 25 May, 1892); sir Francis Henry Jeune, 30 May, 1892. By the Judicature Act of 1873, the probate, divorce, and admiralty courts were constituted the 5th division of the Supreme Court. A probate and matrimonial division of the high court of justice of Ireland was established by Judicature act, 1877; present judge, Robert Richard Warren (1889). *Probate* is the exhibiting and proving a will before the proper authority. The probate registry is now at Somerset House.

PROCESSIONS ACT, 13 Vict. c. 2, passed 12 March, 1850, prohibited party processions, with banners, &c. It was repealed in 1872. Processions of workmen and others, for demonstrations in Hyde Park, prohibited in the great thoroughfares of London, by the police, 31 May, 1890.

PROCLAMATIONS, ROYAL, "have only a binding force when grounded upon and to enforce the laws of the realm."—*Coke.* Henry VIII., in 1539, declared that they were as valid as acts of parliament. This was annulled, 1547.

The lord lieutenant of Ireland has power by proclamation to place districts under the provisions of the Criminal Law Procedure Acts, 1881 and 1887, which districts are then said to be *proclaimed.*

The persons chosen to represent the clergy in convocation are termed proctors. The university proctors enforce discipline.

PROFILES. The first profile taken, as recorded, was that of Antigonus, who, having but one eye, his likeness was so taken, 330 B.C.—*Ashe.* "Until the end of the 3rd century, I have not seen a Roman emperor with a full face; they were always painted or appeared in profile, which gives us the view of a head in a very majestic manner."—*Addison.*

PROGRESISTAS, a political party in Spain, headed by Espartero, duke of Victory, and latterly by general Prim. Since 1865 they adopted a policy of inaction in public affairs; by uniting with the unionists and republicans in Sept. 1868, the government were overthrown, see *Spain.*

A party in Servia and also in Portugal are termed *Progressists.*

The scheme propounded by Mr. Thomas Hare in 1857, in a pamphlet on "Representation," and perfected in his "Treatise on the Election of Representatives," published in 1859, which was well received by Mr. J. Stuart Mill. A society to introduce this principle was formed in Feb. 1884. It included sir John Lubbock (president), Mr. Leonard H. Courtney, and many other M.P.'s.

It proposed that "in all cases where an elector is entitled to one vote only, to enable the elector to nominate more than one candidate to whom, under certain circumstances, that vote might be transferred

PROTESTANT REFORMATION SOCIETY, established 1820; it employs missionaries and readers.

PROTESTANTS. The emperor Charles V. called a diet at Spires in 1529, to request aid from the German princes against the Turks, and to devise means for allaying the religious disputes which then raged owing to Luther's opposition to the Roman catholic clergy. Against a decree of this diet, to support the doctrines of the church of Rome, six Lutheran princes, with the deputies of thirteen imperial towns, formally and solemnly *protested*, 19 April, 1529. Hence the term protestants was given to the followers of Luther; it afterwards included Calvinists, and other sects separated from the see of Rome. The six protesting princes were: John, elector of Saxony; George, margrave of Brandenburg; Ernest and Francis, the dukes of Lunenburg; the landgrave of Hesse; and the prince of Anhalt; these were joined by the citizens of Strasburg, Nuremberg, Ulm, Constance, Heilbron, and seven other cities; see *Lutheranism*, *Calvinism*, *Huguenots*, *Germany*, *Church of England*, &c.

In the reign of George IV., the right of public meetings was fully assured, and they were very effectual in relation to the passing the Reform acts, the Repeal of the Corn Laws, and other important measures. See *Hyde Park*. The place on which the speakers stand is termed a "platform," corresponding to the Roman *rostrum*, and the French *tribune*. "The Platform," by Mr. H. Jephson, was published in 1792. The term "platform" is also applied to a set of political or religious opinions held by a party; such as the "platform of Geneva." *Hooker*.

PURCHASE OF LAND, see under *Land*.

PURCHASE SYSTEM in the army. The payment of a present or gratuity for a commission was prohibited by William III., 1693; but in 1702 purchase was legally re-organised. In 1711 the sale of commissions was forbidden without the royal permission; in 1719-20 regulations were issued; and a fixed scale of prices was adopted in consequence of a commission in 1765. Large over-regulation payments continued to be paid. Commissions of inquiry were held frequently since 1858; and in 1871 the system was abolished, with compensation, by royal warrant, 20 July, 1871, the bill for the purpose having been rejected by the house of lords. For amounts paid, see under *Army*.

PURGATIVES of the mild species (aperients), particularly cassia, manna, and senna, are ascribed to Actuarius, a Greek physician, 1245.

PURGATORY, the middle place between heaven and hell, where, it is believed by the Roman catholics, the soul passes through the fire of purification before it enters the kingdom of God. The doctrine was known about 250; was introduced into the Roman church in the 5th century, and made a religious dogma by Gregory I., 590-604. It was first set forth by a council at Florence, 1439; enforced by the council of Trent, Dec. 1563; see *Indulgences*.

PURIFICATION, after childbirth, was ordained by the Jewish law, 1490 B.C. (*Lev.* xii.); see *Churching*. The feast of the purification was instituted, 542, in honour of the Virgin Mary's going to the temple. (*Luke* ii.) Pope Sergius I. ordered the procession with wax tapers, whence Candlemas-day.

PURITANS, the name first given, it is said, about 1564, to persons who aimed at greater purity of doctrine, holiness of living, and stricter discipline than others. They withdrew from the established church, professing to follow the word of God alone, and maintaining that the church retained many human inventions and popish superstitions; see *Cathari*, *Nonconformists*, and *Presbyterianism*.

PURLEY, see *Diversions*.

PURPLE, a mixed tinge of scarlet and blue, discovered at Tyre. It is said that Hercules Tyrius having observed his dog's lips to be stained, after eating a shell-fish named *murex* or *purpura*, was thereby led to invent the dye. Purple was anciently used by the princes and great men for their garments. It was restricted to the emperor by Justinian I. 532, and *porphyrogenitus* attached to the names of some emperors signifies "born to the purple."

PURVEYANCE, an ancient prerogative of the sovereigns of England of purchasing provisions, &c., without the consent of the owners, led to much oppression. It was regulated by Magna Charta, 1215, and other statutes, and was only surrendered by Charles II. in 1660, for a compensation.

PUSEYISM, a name attached to the views of certain clergymen and lay members of the church of England, who proposed to restore the practice of the church of England to what they believed to be required by the language of her Liturgy and Rubrics, but which were considered by their opponents to be of a Romish tendency. The term was derived from the name of the professor of Hebrew at Oxford, Dr. Edwd. Pusey. The heads of houses of the university of Oxford passed resolutions censuring Dr. Pusey's attempts to renew practices which are now obsolete, 15 March, 1841; and his celebrated sermon was condemned by the same body, 30 May, 1843; he died 16 Sept. 1882; see *Tractarians*, and *Ritualism*.

PYRAMIDS OF EGYPT, about 75 in number, of various sizes, constructed for the preservation of mummies of the kings and their families.

The Stepped Pyramid of Sakkara is conjecturally assigned to Ouenephes of the first dynasty, see *Egypt*. Three great pyramids are situated near Gizeh on the W. bank of the Nile. The first or greatest, is said to have been erected as the tomb of Choofoo, fourth dynasty, the Cheops of Herodotus, dated by Brugsch, 3733–3666 B.C. Its height is said to have been originally 481 feet, and its base 774 square feet. The second pyramid is ascribed to Chafra, or Chephren, 3666–3633 B.C. The third pyramid is said to have been built by Menkaura or Mycerinus, 3633 B.C.

The pyramids have been visited and described by Belzoni, 1815; Vyse, 1836; C. Piazzi Smith, and others, see *Egypt Exploration Fund*.

Some of the eleven pyramids at Sakkara have been explored by M. Maspero, 1880 *et seq.*

At the *battles of the Pyramids*, Napoleon Bonaparte defeated the Mamelukes, and thereby conquered Lower Egypt, 13 and 21 July, 1798.

PYRENEES. After the battle of Vittoria (fought 21 June, 1813), Napoleon sent Soult to supersede Jourdan, with instructions to drive the allies across the Ebro; Soult retreated into France with a loss of more than 20,000 men, having been defeated by Wellington in a series of engagements from 25 July to 2 Aug. One at the Pyrenees on 28 July. A railway through the Pyrenees (from Bilbao to Miranda) was opened 21 Aug. 1862.—THE PEACE OF THE PYRENEES was concluded between France and Spain, by cardinal Mazarin, for the French king, and don Louis de Haro, on the part of Spain, in the island of Pheasants, on the Bidassoa. PYTHAGOREAN PHILOSOPHY. Pythagoras, of Samos, head of the Italic sect, flourished in the 6th century B.C. This trial is said to have been ordered in the reign of Henry II., 1154-89; King James was present at one in 1611. The first *annual* trial of the pyx, appointed by the Coinage act of 1870, took place 18 July, 1871.

Quack medicines were taxed in 1783 *et seq.* An inquest was held on the body of a young lady, Miss Cashin, whose physician, St. John Long, was afterwards tried for manslaughter, 21 Aug. 1830; he was found guilty, and sentenced to pay a fine of 250*l.*, 30 Oct. following. He was tried for manslaughter in the case of Mrs. Catherine Lloyd, and acquitted, 19 Feb. 1831. The Arabian astronomers under the caliphs, in 995, had a quadrant of 21 feet 8 inches radius, and a sextant 59 feet 9 inches radius. Davis's quadrant for measuring angles was produced about 1600; Hadley's quadrant about 1731; see *Navigation*.

Sylla raised the number to twenty; Julius Cæsar to forty.

QUAKERS or SOCIETY OF FRIENDS, originally called Seekers, from their seeking the truth, and afterwards Friends (3 *John*, 14). Justice Bennet, of Derby, gave the society the name of Quakers in 1650, because George Fox (the founder) admonished him and those present to quake at the word of the Lord. This sect was commenced in England about 1646, by George Fox (then aged 22), who was joined by George Keith, William Penn, and Robert Barclay, of Ury, and others. Fox rejected all religious ordinances, explained away the commands relative to baptism, &c.; discarded the ordinary names of days and months, and used *thee* and *thou* for *you*, as more consonant with truth. He published a book of instructions for teachers and professors, and died 13 Jan. 1691. Sir H. Nicolas explains the Quaker calendar in his Chronology of History. The first meeting-house in London was in White Hart-court, Gracechurch-street.

Their principles are contained in "Extracts of minutes" (from the beginning) published 1782: revised 1802, 1861, and 1883.

The Quakers early suffered grievous persecutions. At Boston, U.S., where the first Friends who arrived were females, they were cruelly scourged, and had their ears cut off; some put to death.

In 1659 they stated in parliament that 2000 Friends had endured sufferings and imprisonment in Newgate: and 164 Friends offered themselves at this time, by name, to government, to be imprisoned in lieu of an equal number in danger (from confinement) of death, 1659.

Fifty-five (out of 120 sentenced) were transported to America, by an order of council, 1664.

The masters of vessels refusing to carry them for some months, an embargo was laid on West India ships, when a mercenary wretch was at length found for the service. The Friends would not walk on board, nor would the sailors hoist them into the vessel, and soldiers from the Tower were employed. In 1665, the vessel sailed; but it was immediately captured by the Dutch, who liberated twenty-eight of the prisoners in Holland, the rest having died of the plague. Few reached America.

QUARANTINE, the custom observed at Venice as early as 1127, whereby all merchants and others coming from the Levant were obliged to remain in the house of St. Lazarus, or the Lazaretto, forty days before they were admitted into the city. Various southern cities have now lazarettos; that of Venice is built in the water. In the times of plague, England and all other nations oblige those that come from the infected places to perform quarantine with their ships, &c., a longer or shorter time, as may be judged most safe. Quarantine acts were passed in 1753 and in 1825. The system was abolished in England by an act passed 1896, and the old quarantine men-of-war in the Solent were broken up. Quarantine established throughout Europe, in consequence of the bubonic plague at Bombay (*which see*), 16 Jan. 1897. By order of council, 10 Nov. 1866, foreign cattle were made subject to quarantine.

The publication was proposed to Mr. George Canning, and his support solicited by Mr. John Murray, the publisher, in a letter dated 25 Sept. 1807, in opposition to the opinions of the *Edinburgh Review*. Mr. Murray was ably assisted by Walter Scott, Robert Southey, John Gibson Lockhart (editor 1825-53), J. W. Croker, and other eminent persons. The review first appeared in Feb. 1809, under the editorship of William Gifford, the celebrated translator of "Juvenal." He died 31 Dec. 1826. Dr. (aft. sir) William Smith, editor, from 1867 till his death, 7 Oct. 1893; succeeded by Mr. Rowland Prothero, Nov. 1893.

QUASI MODO, a name given to *Low Sunday* (the first Sunday after Easter) from the commencement of a hymn sung on that day.

QUATERNIONS, an important mathematical method or calculus, invented by Sir Wm. Rowan Hamilton, about 1843.

It is based upon the separation of multiplication from addition, and its fundamental idea is mental transference or motion by what he termed vectors. He attributed to addition motion from a point; to multiplication about a point. Four numbers are generally involved, hence the name quaternion. Hamilton's "Lectures on Quaternions," was published 1853: his "Elements," 1866. Other works by professors Kelland and Tait, published since.

QUATRE-BRAS (Belgium). Here on 16 June, 1815, two days before the battle of Waterloo, a battle was fought between the British and allied army under the duke of Brunswick, the prince of Orange, and sir Thomas Picton, and the French under marshal Ney. The British fought with remarkable intrepidity, notwithstanding their inferiority in number, and their fatigue through marching all the preceding night. The 42nd regiment (Royal Highlanders) suffered severely in pursuit of a French division by cuirassiers posted in ambush behind growing corn. The duke of Brunswick was killed.

QUEENSTOWN (Upper Canada). This town, on the river Niagara, was taken in the war with America by the troops of the United States, 13 Oct. 1812; but was retaken by the British forces, who defeated the Americans with considerable loss in killed, wounded, and prisoners, on the same day. Queenstown suffered severely in this war.—The Cove of Cork was named QUEENSTOWN, 3 Aug. 1849, by the queen on her visit. The U. S. steamer *America* was burnt here, 29 Nov. 1893.

QUENTIN, ST. (N. France). The duke of Savoy, with the army of Philip II. of Spain, assisted by the English, defeated the French under the constable De Montmorency, at St. Quentin, 10 Aug. 1557. In fulfilment of a vow made before the engagement, the king built the monastery, palace, &c., the Escurial, considered by the Spaniards the eighth wonder of the world; see *Escurial.* During the Franco-German war the army of the north, under Faidherbe, was defeated here by the Germans after seven hours' fighting, on 19 Jan. 1871; total loss about 15,000: the German loss about 3100.

QUERETARO (Mexico), was besieged and taken (through the treachery of Lopez) by the liberal general Escobedo, 15th May, 1867. The emperor Maximilian and his generals Miramon and Mejia, were taken prisoners, and, after trial were shot 19 June following.

QUERN or HANDMILL, is probably the implement spoken of in Isaiah xlvii. 2, about 712 B.C. So-called Roman querns have been found in Yorkshire.

QUESNOY (N. France), was taken by the Austrians, 11 Sept. 1793, but was recovered by the French, 16 Aug. 1794. It surrendered to prince Frederick of the Netherlands, 29 June, 1815, after the battle of Waterloo.—It was here that cannon were first used, and called bombards. *Hénault.*

QUIBERON BAY (W. France). A British force landed here, Sept. 1746, but was repulsed. In the bay admiral Hawke gained a complete victory

over the French admiral Conflans, and thus defeated the projected invasion of Great Britain, 20 Nov. 1759. Quiberon was taken by some French regiments in the pay of England, 3 July, 1795; but on 21 July, through treachery, the French republicans, under Hoche, retook it by surprise, and many emigrants were executed. About 900 of the troops, and nearly 1500 royalist inhabitants who had joined the regiments in the pay of Great Britain, effected their embarkation on board the ships.

QUICKSILVER, in its liquid state, mercury. Its use in refining silver was discovered, 1540. There are mines of it in various parts, the chief of which are at Almaden, in Spain, and at Idria, in Illyria; the latter, discovered by accident in 1497, for several years yielded 1200 tons. A mine was discovered at Ceylon in 1797; and at New Almaden and other places in California. Quicksilver was congealed in winter at St. Petersburg, in 1759. It was congealed in England by a chemical process, without snow or ice, by Mr. Walker, in 1787. Corrosive sublimate, a deadly poison, is a combination of mercury and chlorine; see *Calomel.*

QUICUNQUE VULT, see *Athanasian Creed.*

QUIETISM, the doctrine of Miguel Molinos, a Spaniard (1627-96), whose work, the "Spiritual Guide," published in 1675, was the foundation of a sect in France. He held that religion consisted in an internal silent meditation on the merits of Christ and the mercies of God. Madame de la Mothe-Guyon, a quietist, was imprisoned in the Bastille for her visions and prophecies, but released through the interest of Fénélon, archbishop of Cambray, between whom and Bossuet, bishop of Meaux, arose a controversy, 1697. Quietism was finally condemned by pope Innocent XII. in 1699. See *Jansenists*, *Quakerism* and *Pietism.*

QUILLS are said to have been first used for pens in 553; some say not before 635.

QUINCE, the *Pyrus Cydonia*, brought to this country from Austria, before 1573. The Japan quince, or *Pyrus Japonica*, brought hither from Japan, 1796.

QUINDECEMVIRI, fifteen men, chosen to keep the Sybilline books. The number, originally two (duumviri), about 520 B.C., was increased to ten in 365 B.C., and afterwards (probably by Sylla) to fifteen, about 82 B.C. Julius Cæsar added one; but the precedent was not followed.

QUININE or QUINIA, an alkaloid (much used in medicine), discovered in 1820 by Pelletier and Caventou. It is a probable constituent of all genuine cinchona barks, especially of the yellow bark; see *Jesuits' Bark.* Artificial quinine was prepared (synthetically) by Mr. W. L. Scott, in Oct. 1865.—QUINOIDINE, see *Fluorescence.* John Eliot Howard, promoter of the cultivation of cinchona in India, and author of "Quinologia" (1862) died 22 Nov. 1883.

QUINQUAGESIMA SUNDAY. The observation is said to have been appointed by Gregory the Great (pope, 590-604). The first Sunday in Lent having been termed *Quadragesima*, and the three weeks preceding having been appropriated to the gradual introduction of the Lent fast, the three Sundays of these weeks were called by names significant of their position in the calendar: and reckoning by decades (tenths), the Sunday preceding Quadragesima received its present name, *Quinquagesima*, the second *Sexagesima*, and the third *Septuagesima.*

QUINTILIANS, heretics in the 2nd century, the disciples of Montanus, who took their name from Quintilia, a lady whom he had deceived by his pretended sanctity, and whom they regarded as a prophetess. They made the eucharist of bread and cheese, and allowed women to be priests and bishops. *Pardon.*

QUIRINUS, a Sabine god, whose name was given to Romulus after his death. L. Papirius Cursor, general in the Roman army, first erected a sun-dial in the temple of Quirinus, from which time the days began to be divided into hours, 293 B.C. *Aspin.* The sun-dial was sometimes called the Quirinus, from the original place in which it was set up. *Ashe.* The Sabines who became Roman citizens were termed QUIRITES.

QUITO (capital of the republic of Equator), founded in 1534, was the scene of the measurement of a degree of the meridian, by the French and Spanish mathematicians, 1736-42. Forty thousand persons perished by an earthquake which almost overwhelmed the city of Quito, 4 Feb. 1797. Since then violent shocks, but not so disastrous, occurred; till one, on 22 March, 1859, when about 5000 persons were killed; see *Earthquakes* and *Equator.*

QUIXOTE, see *Don Quixote.*

QUOITS, a game said to have originated with the Greeks, and to have been first played at the Olympic games, by the Idæi Dactyli, fifty years after the deluge of Deucalion, 1453 B.C. Perseus, the grandson of Acrisius, by Danaë, having inadvertently slain his grandfather, when throwing a quoit, exchanged the kingdom of Argos, to which he was heir, for that of Tirynthus, and founded the kingdom of Mycenæ, about 1313 B.C.

QUOTATIONS. Athenæus's "*Deipnosophistæ* or *Banquet of the Learned*" (compiled about 228), and Burton's "Anatomy of Melancholy" (1621), contain masses of extracts. Henry Ainsworth's "Communion of Saints" (died 1622), is a mosaic of Scripture quotations.

QUO WARRANTO ACT, passed 1280. By it a writ may be directed to any person to inquire by what authority he holds any office or franchise. Charles II. directed a writ against the corporation of London in 1683, and the court of king's bench declared their charter forfeited. The decision was reversed in 1690. The proceedings have been regulated by various acts, 1710, 1792, 1837, 1843.

RACES, one of the ancient games of Greece. Horse-races were known in England in very early times. Fitz-Stephen, in the days of Henry II., mentions the delight taken by the citizens of London in the diversion. In James I.'s reign Croydon in the south, and Garterly in the north, were celebrated courses. Near York there were races, and the prize was a little golden bell, 1607. *Camden.* In the end of Charles I.'s reign, races were performed at Hyde Park. Charles II. patronised them, and instead of bells, gave a silver bowl, or cup, value 100 guineas. William III. added to the plates (as did queen Anne), and founded an academy for riding.

RACE-HORSES.

Flying Childers, bred in 1715 by the duke of Devonshire, was allowed by sportsmen to have been the fleetest horse that ever ran at Newmarket, or that was ever bred in the world; he ran four miles in six minutes and forty-eight seconds, or at the rate of 35½ miles an hour, carrying nine stone two pounds. He died in 1741, aged 26 years.

Eclipse was the fleetest horse that ran in England since the time of *Childers;* he was never beaten, and died in February, 1789, aged 25 years. His heart weighed 14 lb., which accounted for his wonderful spirit and courage. *Christie White's Hist. of the Turf.*

RACK, an engine of torture, for extracting a confession from criminals, mentioned by Demosthenes, *de Coronâ*, B.C. 330, and in later times an instrument of the Inquisition. Lord Coke states from tradition that the duke of Exeter, in the reign of Henry VI., erected a rack of torture (thence called the duke of Exeter's daughter, now seen in the

Tower), 1447. In the case of Felton, who murdered the duke of Buckingham, the judges of England protested against the proposal of the privy council to put the assassin to the rack, as contrary to the laws, 1628; the use of the rack was abolished 1640. See *Ravaillac* and *Torture*.

He died 1 Nov. 1714, leaving 40,000*l.* to the university of Oxford for the founding a library, the first stone of which was laid 17 May, 1737, and the edifice was opened 13 April, 1749.—The RADCLIFFE OBSERVATORY, Oxford, founded by the exertions of Dr. Hornsby, Savilian professor of astronomy, about 1771, was completed in 1794. The publication of the observations was commenced in 1842, by Mr. Manuel J. Johnson, the director, appointed in 1839. Radcliffe Infirmary opened in 1770, see *Oxford*, 1893.

RADICALS or "RADICAL REFORMERS," persons who professed to aim at procuring a thorough reformation in the government and policy of England, became prominent in 1816, when Hampden clubs were formed, of which sir Francis Burdett, lord Cochrane, major Cartwright, and William Cobbett were prominent members. Samuel Bamford's "Life of a Radical," published in 1842, gives much information; he died 13 April, 1872. Many radicals were severely punished, 1817-20. Wm. Harris's "History of the Radical Party," published early in 1885.—The "Radicals" in the United States were the party headed by Thaddeus Stevens, bitterly opposed to the policy of president Johnson, as too favourable to the subdued Southern States.

The *Radical Programme*, advocated by the rt. hon. Joseph Chamberlain, widely circulated, first appeared July, 1885, in the *Fortnightly Review*; it included reform of the land laws, free education, increased local government, reform in taxation and finance, improvement of condition of agricultural labourers and of the poor, and religious equality and dis-establishment of national churches. Which tended to disorganise the liberal party.

Mr. C. C. Greville (*Journal*, 25 Aug. 1837) describes "Tory Radicals." Some politicians were so termed in 1885

RAGGED SCHOOLS, free schools for outcast destitute ragged children, set up in large towns. The instruction is based on the scriptures, and most of the teachers are unpaid. John Pounds, a cobbler, of Portsmouth, who died in 1839, opened a school of this kind; and one was set up by Andrew Walker, in "Devil's Acre," Westminster, in 1839. *Knight.* They did not receive their name till 1844, when the "Ragged school union" was formed, principally by Mr. S. Starey and Mr. Wm. Locke (afterwards hon. secretary). The earl of Shaftesbury was chairman. In 1856 there were 150 Ragged school institutions. Sunday ragged schools reported in London in 1867, 226; in 1898, 231; day schools, in 1867, 204; in 1878, 58; week evening schools, in 1867, 207, in 1878, 147; 44 industrial schools in 1898. Ragged school buildings were exempted from rates, 1869. The day schools are being gradually superseded by those established by the London school board; but the sunday and night schools, mother's meetings, &c., are still maintained in very great efficiency (1898). The union reported 212 federated schools (1895). Dr. Guthrie, a founder of ragged schools in Edinburgh, &c., died 24 Feb. 1873. The earl of Shaftesbury presided at the 40th anniversary of the Ragged School Union, 12 May, 1884. Jubilee celebrated, 20 April, 1894. Annual meetings; the union was styled Shaftesbury society in May, 1898. See *Shoeblack*.

RAGMAN ROLL (said to derive its name from Ragimunde, a papal legate in Scotland) contains the records of the homage and fealty to Edward I., sworn to by the nobility and clergy of Scotland at Berwick in 1296. The original was given up to Robert Bruce, king of Scotland, in 1328, when his son David was contracted in marriage to the princess Joanna of England.

RAGUSA, a city on the Adriatic, on the south confines of Dalmatia, was taken by the Venetians, 1171, but became an independent republic, 1358. It suffered much by an earthquake, 1667; was taken by the French in 1806, and given up to Austria in 1814.

RAILWAYS. Short roads, in and about Newcastle, laid down by Mr. Beaumont, so early as 1602, are thus mentioned in 1676:—"The manner of the carriage is by laying rails of timber from the colliery to the river, exactly straight and parallel; and bulky carts are made with four rollers fitting those rails, whereby the carriage is so easy that one horse will draw down four or five chaldron of coals, and is an immense benefit to the coal merchants." *Roger North.* They were made of iron at Whitehaven, in 1738. REAPING-MACHINES. One was invented in this country early in the present century, but failed from its intricacies. At the meeting of the British Association at Dundee, Sept. 1867, the rev. Patrick Bell stated that he invented a reaping-machine in 1826, which was used in 1827; the principle being that on which the best American machines are now constructed. On 15 Jan. 1868, he was presented with a valuable testimonial, and 1000*l.* in money. McCormick's American machine was invented about 1831, and perfected in 1846; he received a gold medal from the jurors of the Exhibition of 1851; and also at the Royal Agricultural Society's competition at Bristol, 6 Aug. 1878. The sheaves are bound by these reaping machines. About 200 patented; few good. Hussey's machine, also American, exhibited in 1851, was highly commended.

It was relinquished on his majesty's recovery, 26 Feb. 1789. The return of the malady led to the prince of Wales (afterwards George IV.) being sworn in before the privy council as regent of

* It was calculated (about 1856) that there were in London 30,000, and in England 100,000 youths under 17 leading a vagabond life, and that out of 15,000 of those who were committed for trial nearly half were in custody for the first time.

REGENT'S CANAL, begun at Paddington, where it joins a cut to the Grand Junction, passes under Maida-hill, continues its course by the Regent's-park to Islington, where another subterranean excavation, about three-quarters of a mile in length, was formed for its passage. It then proceeds by Hoxton, Hackney, Mile-end, to Limehouse, where it joins the Thames. The whole length of it is nine miles; it comprises twelve locks and thirty-seven bridges. Begun, 1812; opened 1 Aug. 1820. Great explosion of *gunpowder* (*which see*), 2 Oct. 1874. New bridge, near Gloucester gate, Regent's park, opened by the duke of Cambridge, 3 Aug. 1878. REGENT'S PARK, originally part of the grounds belonging to a palace of queen Elizabeth, near to the north end of Tottenham court-road, pulled down in 1791. Since 1600, the property was let to various persons, but the leases having expired it reverted to the crown; and in 1814 great improvements were commenced under the direction of Mr. Nash. The park consists of about 450 acres; within it are the gardens of the Zoological Society and the Royal Botanical Society. During a frost on 15 Jan. 1867, the rotten ice of one of the lakes gave way, and about 200 persons were immersed, of whom above 40 perished. Addition of 20 acres made to the public park, 1883.

Joseph Rumbold was murdered near York Gate, 24 May. Eight youths, George Gallesly, 17, William Elvis, 16, Francis Cole, 18, Peter Lee, 17, William Joseph Graefe, 17, William Henshaw, 16, Charles Henry Govier, 16, and Michael Duling, 15, all described as labourers, were charged with the wilful murder, 1 Aug.; Gallesly was convicted; the rest acquitted of murder, 2 Aug.; they pleaded guilty to minor charges, and were sentenced to various terms of penal servitude, 4 Aug. The evidence disclosed the existence of local bands of young roughs carrying on internecine warfare. Joseph Rumbold was not the intended victim; Gallesly reprieved, Aug. 1888.

REGISTERS. The registering of deeds and conveyances disposing of real estates was appointed to be effected in Yorkshire and in Middlesex, 2 Anne, 1703, *et seq*. Greater security was thus given to purchasers and mortgagees; and the value of estates increased in those counties. Wills have been for a series of years kept and registered, in London, at Doctors' Commons; see *Wills*. The registering of shipping in the Thames was commenced, 1786; and throughout England, 1787; and several acts and amendments of acts have since followed for keeping and improving registers.

The duties and payments of the Lord Clerk Register of Scotland and his deputy were regulated by 42 & 43 Vict. c. 44 1879

REGISTERS, PAROCHIAL, were established by Cromwell, lord Essex, by which the dates of births, marriages, and burials, became ascertainable, Sept. 1538. This measure was opposed by the people, who feared some new taxation. A stamp-tax was laid on registers in 1784. Laws for their better regulation were enacted in 1813 *et seq*. The great Registration act (introduced by lord John Russell), 6 & 7 Will. IV. c. 86, passed 17 Aug. 1836, see *Bills of Mortality*, &c.

Charles II. in 1672, and revived by William III. in 1690, was commuted by the Irish Presbyterian Church act passed June, 1871. The allowance to certain protestant dissenting ministers in Ireland was given up by them in 1857, in deference to the wishes of English dissenters.

REGULATION OF THE FORCES ACT passed 17 Aug. 1871. See *Army*.

REICHENBACH (Prussia). Here Duroc was killed during the conflicts between the French and the allies, 22 May, 1813; see *Bautzen*. Here was signed a subsidy treaty between Russia, Prussia, and England, whereby the last engaged to provide means for carrying on the war against Napoleon I. on certain conditions, 14, 15 June, 1813. Austria joined the alliance soon after.

REICHSRATH, the representative council of the empire of Austria, reconstituted by decree 5 March; met on 31 May, 1860. In May, 1861, the upper house consisted of 17 spiritual, 55 hereditary, and 39 peers. The lower house consisted of 136 elected deputies. No representatives came from Hungary, Transylvania, Venetia, the Banat, Slavonia, Croatia, and Istria. The Reichsrath was abolished by a rescript, 21 Sept. 1865, with the view of restoring autonomy to Hungary and other provinces. It again met 20 May, 1867. The Reichstag of Germany, the imperial parliament or diet, first met at Berlin, 21 Mar. 1871.

REIGATE (Surrey), sent two members to parliament in the reign of Edward I.; lost one by the Reform Act of 1832, and was wholly disfranchised for corruption by that of 1867. Population, 1881, 18,662; 1891, 22,646.

REIGN OF TERROR. Maximilien Robespierre headed the populace in the Champ de Mars, in Paris, demanding the dethronement of the king, 17 July, 1791. He was triumphant in 1793, and numbers of eminent men and citizens were sacrificed during his sanguinary administration. Billaud Varennes denounced the tyranny of Robespierre in the tribune, 27 July, 1794. The next day he suffered death, with many of his companions; see *France*. This has been termed the *Red* Terror. The reaction after the restoration of the Bourbons, 1815, disgraced by many atrocious acts of wanton cruelty, has been termed the *White* Terror. The Jesuits were then conspicuous in the destruction of their adversaries.

REIGNS OF SOVEREIGNS. The average duration, according to Newton, is 19 years each; according to Hales $22\frac{1}{3}$ years; that of the sovereigns of England being $23\frac{1}{2}$ years, and that of the popes, $7\frac{1}{2}$ years. Pius IX. was the first pope who reigned above 25 years, 1846-78.

RELICS, the trade in these became general in the 7th century, fragments of bones, &c. being brought from Jerusalem. The sale of relics was prohibited by pope Innocent III. 1198, without effect.

RELIEF CHURCH, a secession from the church of Scotland, founded by Thomas Gillespie, who was deposed from his ministry for opposing the doctrine of passive obedience to the law of the church of Scotland respecting the settlement of ministers, 23 May, 1752. The church was constituted as the "presbytery of relief," 22 Oct. 1761. The Relief and Secession churches were united as the United Presbyterian Church, 13 May, 1847.

RELIEF OF DISTRESS (IRELAND) ACT, 43 & 44 Vict. c. 14, passed 2 Aug. 1880. See *Ireland, Dec.* 1890.

RELIGION (from *religo*, I bind again, in the sense of a vow or oath) comprehends a belief in the being and perfections of God, and obedience to his commandments. The Jewish religion is set forth in the Old, and the Christian religion in the New, Testament. Departure from these scriptures has been the origin of all corrupt forms of religion, as foretold in them. Buddhism differs from this. See *Mahometanism*, and other religions and sects under their names. The population of the globe with reference to religious worship, is given by Balbi (who assumed the total population to be 1,050,000,000), and Dieterici (who assumed it to be 1,288,000,000), as follows: A gallery of religions at the British museum, Bloomsbury, opened 19 Feb. 1894.

REMONSTRANCE, THE GRAND, drawn up by the house of commons, and presented to king Charles I., 1 Dec. 1641. It consisted of 206 articles, dwelt bitterly on all the king's illegal and oppressive acts, and was printed by order of the house.

RENAISSANCE, a term applied to the revival of the study of classic literature and art in the 15th and 16th centuries, under the patronage of the Medici and others; see *Painters*, and *Sculptors*. Mr. John A. Symonds' "History of the Renaissance in Italy," with supplements, 7 vols., published 1875-86. He was born 1840 and died 19 April, 1893.

RENDSBURG (Holstein), was taken by the imperialists in 1627; by the Swedes in 1643; and by the Prussians and confederate troops in 1848. The first diet of Schleswig and Holstein met here 3 April, 1848. It was re-occupied by the Danes in 1852, and taken by the Prussians after a serious conflict, 21 July, 1864.

RENNES (capital of Brittany, N. W. France). Here was established by Henry II., in 1553, the parliament so celebrated for its independence, especially in its struggle with the court, 1788-89. On 20 May, 1788, it declared infamous every one who should take part in the *cour plenière* then proposed, but afterwards suppressed.

RENTS said to have been first made payable in money, instead of in kind, about 1135. Numerous statutes have been enacted in various reigns to define the relations and regulate the dealings between landlord and tenant. 8 & 9 Vict. c. 106 (1845) regulates leases. By the act 8 Anne, 1709, no goods are removable from tenements under an execution until the rent shall have been paid to the landlord by the sheriff, 1709. The rental of England, including land, houses, and mines, was 6,000,000*l.* about the year 1600, and twelve years' purchase the value of land. About 1690, the rental amounted to 14,000,000*l.*, and the land was worth eighteen years' purchase. *Davenant on the Revenues.* The rental of the United Kingdom has been estimated in the present century at 127,000,000*l.*; Great anti-rent agitation in Ireland, 1879, *et seq.*; see *Land* and *Ireland*, &c.

REPEAL OF THE UNION, IRELAND. An Irish association was formed with this object under the auspices of Mr. O'Connell, in 1829. See *Home Rule and Ireland.*

A proclamation of the lord lieutenant prohibited the meetings of a society "leagued for the purpose of procuring a repeal of the union, under the name of the Irish Society for Legal and Legislative Relief, or the Anti-Union Society" . 18 Oct. 1830
The commons, by a majority of 484, reject Mr. O'Connell's motion for repeal . 27 April, 1834
A new association in 1841, 1842, and 1843 became more violent. Assemblies of the lower classes of the people were held in the last-named year, in various parts of Ireland, some of them amounting to 150,000 persons, and called "monster meetings."
A great meeting at Trim, 16 March; other meetings were held at Mullingar, Cork, and Longford, on 14, 21, and 28 May, respectively; at Drogheda, Kilkenny, Mallow, and Dundalk, on 5, 8, 11, and 29 June; at Donnybrook and Baltinglass, 3 and 20 July; at Tara, 15 Aug.; at Loughrea, Clifton, and Lismore, 10, 17, and 24 Sept.; and at Mullaghmast . . . . . 1 Oct. 1843
A meeting to be held at Clontarf, on 8 Oct. was prevented by government; and Mr. O'Connell and his chief associates were brought to trial for political conspiracy, 15 Jan. 1844; and convicted 12 Feb.; but the sentence was reversed by the house of lords, 4 Sept.; see *Trials.*
The association for the repeal of the union continued for some time under the direction of Mr. John O'Connell, but was little regarded.
The total "repeal rent" is said to have amounted to 134,379*l.*
A fruitless attempt was made in Dublin to revive repeal agitation . . . . . 4 Dec. 1860

REPORTING. The publication of the debates in parliament is forbidden as a breach of privilege, but was virtually conceded, after a severe struggle, in 1771.* Reporters' galleries were erected in the houses of parliament after the fire of 1834. To the unfettered liberty of reporting we doubtless owe much of our freedom and good government; see under *Law.* By the verdict for the defendant in the case of Wason *v. The Times* (for libel) reports of parliamentary debates were decided to be privileged, Nov. 1868. For the attempted exclusion of reporters, see *Parliament*, 1875. A commons committee on reporting recommend continuance of Hansard's debates with improvement, May, 1879.

The publication of Hansard's parliamentary debates began 1803 and closed in 1888. Latterly a subsidy was granted. The publication of the debates was taken up by Messrs. Macrae, Curtice & Co., Feb. 1889; and continued by the Hansard Publishing Union, limited, 1889; the Union ordered to be wound up, 13 May. See *Trials*, 1892-93.

The *Representative*, a daily Tory paper, was started by Mr. John Murray, the bookseller, in opposition to the *Times*, in 1826. Although he was assisted by Mr. Benjamin Disraeli and other eminent persons, the project was unsuccessful; the first number appeared 25 Jan., the last . 29 July, 1826

REPUBLICANS, see *Democrats.* The name adopted by the Northern party in the United States, N.A., opposed to the democrats in the South. It is stated that the first delegate-nominating convention in the United States that adopted the name Republican party, was held in Strong, Franklin county, Maine, 7 Aug. 1854. Sir Charles Dilke, M.P. professed himself a republican at public meetings and was much applauded, Nov. 1871; but at some places his appearance led to riotous proceedings. His motion for returns respecting the expenditure of the civil list by the queen was negatived in the house of commons (2—276), 19 March, 1872. A national republican conference of delegates was held at Sheffield, 1 Dec. 1872, when a national flag was adopted.

REQUIEM, a solemn mass, sung for the dead, so called from the introit "Requiem Æternam," &c. Palestrina's Requiem was printed at Rome, 1591; Vittoria's at Madrid, 1605; Mozart's last work was a requiem, 1791.

REREDOS, the screen or decorated portion of the wall behind the altar in a church.

A highly sculptured reredos, designed by sir G. G. Scott, was erected in Exeter cathedral, by subscription 1873

* Very inaccurate reports of parliamentary debates were inserted in the *Gentleman's Magazine* and other periodicals in the middle of the last century. Miller, printer of the *London Evening Mail*, was arrested in the city of London, by order of the house of commons, for publishing the debates, but was discharged by the lord mayor, who for doing this was sent to the Tower, where he remained until the end of the session. No opposition was made to the publication of the debates in the next session, 1772.

Prebendary Philpotts, the chancellor, and others who objected, brought their objections before the bishop's visitation court, on 7 Jan.; it was decided that the bishop had jurisdiction in the matter, and he ordered the reredos to be removed, 15 April, 1874. Dean Boyd appealed to the court of arches, and sir R. Phillimore reversed the previous decision . . . . . 6 Aug. 1874

Prebendary Philpotts appealed to the judicial committee of the privy council, who decided that the reredos should remain . . . . 24 Feb. 1875

The magnificent reredos set up in St. Paul's Cathedral, London, was protested against as idolatrous by some of the London clergy, April, 1888. An action against the dean having been stopped by the bishop, the queen's bench division ordered the bishop to withdraw his veto upon the prosecution, 1 June, 1889. After further litigation, the house of lords sustained the bishop's veto . . . . . 20 July, 1891

RESERVE FORCES. In the summer of 1859, acts were passed to provide for the establishment of a military reserve force of men who have been in her majesty's service (not to exceed 20,000), and a volunteer reserve force of seamen not to exceed 30,000. These acts were consolidated and amended in 1867, 1882 and 1896. The reserve forces called out by proclamation, on account of possible war with Russia, 2 April, 1878. About 35,000 good soldiers appeared, and were commended. They were disbanded 31 Aug. 1878. Again called out on account of war in Egypt, 25 July, 1882, and prospect of war with Russia, 27 March, 1885. Average of army reserve: 1888, 55,068; 1890, 56,082; 1893, 76,874; 1896, 78,057. Important changes to be made to meet exigencies during war time, act passed, 1 July, 1898.

RESOLUTE, ship, see *Franklin Search*, 1854.

The annual form of prayer, with thanksgiving, then appointed, was ordered to be disused by 22 Vict. c. 2, 25 March, 1849. See *France*, 1814, 1815.

RETREAT OF THE TEN THOUSAND GREEKS, who had joined the army of the younger Cyrus in his revolt against his brother, Artaxerxes Mnemon. The Greeks were victors, but Cyrus was defeated and slain at the battle of Cunaxa, 401 B.C. Artaxerxes having enticed the Greek leaders into his power and killed them, Xenophon was called to the command of his countrymen. Under continual alarms from sudden attacks, he led them across rapid rivers, through vast deserts, over the tops of mountains, till he reached the sea. The Greeks returned home after a march of 1155 parasangs or leagues (3465 miles), which was performed in 215 days, after the absence of fifteen months. This retreat has been immortalised by the account given by its conductor, in his "Anabasis Cyri" (Expedition of Cyrus).

* Revised in relation to army, navy, and India.

The weekly instead of the quarterly publication of the public revenue and expenditure was begun by Mr. Robert Lowe, the chancellor of the exchequer, 16 Feb. 1870.

By an act passed 31 July, 1868, revenue officers are permitted to vote for the election of members of parliament.

Above 100 statutes relating to inland revenue fell into disuse 1 Jan. 1871.

The revenue friendly societies, and national debt act, 45 & 46 Vict., c. 72, passed 18 Aug. 1882. New revenue act passed, 1884.

REVEREND, an honorary appellation given to the clergy, since the middle of the 17th century.

In Tamworth parish register the minister is first styled "reverend," in 1657, occasionally afterwards; but regularly so after 1727. It first appears in the registry of All Hallows, Barking . 1732

The prefix on a family tombstone was refused to Mr. Keet, a Wesleyan preacher, by the bishop of Lincoln, but given by the archbishop of Canterbury 1874

On trial, Mr. Walter G. F. Phillimore, the chancellor of Lincoln, decided against Mr. Keet, who gave notice of appeal, 3 June. Sir R. Phillimore gave a similar decision in the court of arches, 31 July, 1875

On appeal to the privy council these decisions were reversed. It was decided that there is no law or usage restricting the epithet to ministers of the Church of England; it is merely laudatory. 21 Jan. 1876

REVIEWS. The *Journal des Scavans*, published on 5 Jan. 1665, by Denis de Salo, under the name of Hédouville, was the parent of critical journals. It was soon imitated throughout Europe, and was itself translated into various languages. It is still published. George III. spoke of this publication to Dr. Johnson, in the private interview with which he was honoured by his majesty, in the library of the queen's house, in Feb. 1767. *Boswell.* The *Bibliothèque Anglaise* came out in 1716-27. REVISERS, see under *Bible*.

REVISING BARRISTERS' COURTS, to examine the lists of voters for members of parliament, were instituted by the Reform Act of 1832.

REVISION, see under *Bible*. Advocates of the revision of the French constitution, chiefly Bonapartists or Jeromists, termed *Revisionists*, Feb. 1884.

REVIVALS on the subject of religion arose in the United States in 1857. In the autumn of 1859, they began in Scotland, the north of Ireland (particularly Belfast), and England. Many meetings were held for prayers and preaching throughout the week, as well as on Sundays. The "*twelve days' mission*," a series of revival services, took place in many London churches during advent, 1869.

Mr. Moody, preacher, and Mr. Sankey, singer, American Revivalists, visited many towns in the United Kingdom, 1874-5. Their meetings in London began at the Agricultural Hall, 9 March, about 15,000 present; at the Queen's theatre, Haymarket, 12 April-31 May; farewell meeting, 12 July, 1875. Moody and Sankey again in London, 6 Oct. 1881; 3 Nov. 1883-23 June, 1884. See *Salvation Army*.

REVOLUTIONARY CALENDAR, see *French Revolution*, and *Calendar*.

REVOLUTIONARY TRIBUNAL, established at Paris, Aug. 1792.

Up to 27 July, 1794, when Robespierre was deposed, it had put to death 2774 persons, including queen Marie Antoinette, the princess Elizabeth, and a large number of nobility and gentry, male and female. The oldest victim was counsellor Dupin, aged 97; the youngest, Charles Dubost, aged 14. From 27 July to 15 Dec. 1794, only Robespierre and his accomplices (about 100) suffered by it.

REVOLVERS, see *Pistols*.

REVUE DES DEUX MONDES, the French literary and historical periodical published on the 1st and 15th of each month, first appeared in 1831. It includes among its contributors the most eminent writers in France.

REYNARD THE FOX, "REINEKE FUCHS," a satirical epic in low German, in which beasts are actors and speakers, was first printed as Reineke Vos, at Lubeck in 1498, and professes to be written by Hinreck van Alkmer. It has been frequently translated. Goethe's version in High (or literary) German hexameters appeared in 1794. Jacob Grimm has shown that the subject-matter of this "Thier-sage" or "beast-fable" is very ancient, many incidents being found in Pilpay and other oriental writers. The early French had a "Roman de Renart," and "Renart le Nouvel." A poem, entitled "der Reinaert," in Flemish, was known in the 11th century; Caxton's translation in English prose was printed 1481; a poetic English translation of Goethe's version, by T. J. Arnold, appeared in 1855.

REZONVILLE, BATTLE OF, 18 Aug. 1870, see *Metz*.

RHÆTIA (or RÆTIA), an ancient Alpine country, comprising the modern Grisons, Tyrol, and part of Lombardy, inhabited by a wild rapacious people, after a long struggle was conquered by Drusus and Tiberius, B.C. 15.

RHÉ, ISLE OF, see *Ré* and *Rochelle*.

RHEA, see *China Grass*.

RHEGIUM (now Reggio), S. Italy, a Greek colony, flourished in the 5th century, B.C. It was held by the Campanian legion, 281-271, afterwards severely punished for its rebellion. Reggio was taken by Garibaldi, Aug. 1860.

RHEIMS (N. France). The principal church here, built before 406, rebuilt in the 12th century, is now very beautiful. The corpse of St. Remy, the archbishop, is preserved behind the high altar, in a magnificent shrine. The kings of France were crowned at Rheims; probably because Clovis, the founder of the French monarchy, when converted from paganism, was baptized in the cathedral in 496. Several ecclesiastical councils have been held here. The city was taken and retaken several times in the last months of the French war, 1814. University founded by cardinal Lorraine, 1547, suppressed about 1790. Strike of the workmen of Mr. Jonathan Holden, mill owner, a great benefactor to the town, May, 1890. Population, 1891, 104,186.

RHEOMETER, see under *Electricity*.

RHETORIC. Rhetorical points and accents were invented by Aristophanes of Byzantium, 200 B.C. Rhetoric was first taught in Latin at Rome by Photius Gallus, about 87 B.C. He taught Cicero, who said "We are first to consider what is to be said; secondly, how; thirdly, in what words; and lastly, how it is to be ornamented." A regius professor of rhetoric was appointed in Edinburgh, 20 April, 1762, when Dr. Blair became first professor.

RHINE (Latin, *Rhenus;* German, *Rhein;* French, *Rhin*), a river, about 760 miles long, rising in Switzerland, receiving the Moselle, Main, Meuse, Neckar, and other rivers, terminating in many arms in Holland, and falling into the German ocean. On its banks are Constance, Basel, Strasbourg, Spires, Mannheim, Cologne, Düsseldorf, Utrecht, and Leyden. The possession of the banks of the Rhine has been the cause of many wars, and it has been crossed by the French above twenty times in a century. In the beginning of the revolutionary war, Custine invaded Germany by crossing it in 1792; and at the close of the war in 1815, France retained the left bank, but lost it at the close of the Franco-Prussian war, 1870-1 (*which see*). A navigation treaty with other powers was signed by France, 17 Oct. 1868. A central committee for the navigation exists, formed by members for Alsace, Lorraine, Baden, Bavaria, Hesse, Holland, and Prussia. Very great damage (about 4,000,000*l.*) and loss of life, caused by the rising of the river through excessive rain, end of November and December, 1882; relieved by government grants.

Becker's German song "They shall not have it, the free German Rhine;" and Alfred de Musset's reply, in French, "We have had it, your German Rhine," appeared in 1841. Max Schneckenburger, author of "The Watch on the Rhine," died 1851. All were popular during the war, 1870-71.

RHODE ISLAND (N. America), settled by Roger Williams about 1636, was taken in the war of independence by the British, 8 Dec. 1776; but was evacuated by them, 25 Oct. 1779. Capitals, Providence and Newport. Population in 1880, 276,531; 1890, 345,506; see *United States*.

RHODES, an island on the coast of Asia Minor, is said to have been peopled from Crete, as early as 916 B.C. The Rhodians were great navigators, and institutors of a maritime code afterwards adopted by the Romans. The city was built about 408 and flourished 300-200 B.C.; see *Colossus*. Rhodes, long an ally of the Romans, was taken by the emperor Vespasian, A.D. 71. It was held by the Knights Hospitallers from 1309 to 1522, when it was conquered by the Turks, who still retain it. The knights retired to Malta (*which see*). Rhodes suffered severely by an earthquake on 22 April, 1863.

RHODESIA, the name given (1895) to the territories subject to the S. Africa company, about 2,000 mi. long, and 1,000 mi. broad; chief towns, Bulawayo and Salisbury. See *Zambesi and Mashonaland*, 1894.

Queen Elizabeth was a prisoner in this palace for a short time during the reign of her sister. When she became queen it was one of her favourite places of residence; and here she died 24 March, 1603. It was afterwards the residence of Henry, prince of Wales. The beautiful park and gardens were enclosed by Charles I. The observatory was built by sir W. Chambers in 1769. RITUALISTS, a name given in 1866 to a party in the church of England, formerly termed Puseyites, for endeavouring to give a more imposing character to public worship, by the use of coloured vestments, lighted candles, incense, &c., professing to go back to the practices of the church in the time of Edward VI. An exhibition of these things was held during the church congress at York in Oct. 1866, but was not officially connected with it. The practices of the ritualists (said by Mr. Disraeli to be symbolical of doctrines they were bound to renounce), were censured in several episcopal charges in Dec. 1866; in two reports of the ritualistic commission, 19 Aug. 1867, and April, 1868, and by the judicial committee of the privy council on appeal, 23 Dec. 1868. See *Church of England* and *Trials*, 1867-9. At a general convocation of the American episcopal church at Philadelphia, 27, 28 Oct. 1868, after a warm discussion on ritualism, the discussion was adjourned. It was renewed at the convocation 10 Oct. 1874, and the ritualists were decidedly beaten by the evangelical party, a stringent canon on ceremonies being passed 27 Oct. The "Public Worship Regulation Act" was passed 7 Aug. 1874, for the repression of *ritualism* in England. See *Public Worship*.

The Pollution of Rivers Act passed 15 Aug. 1876; amended 1893

RIVOLI (near Verona, N. Italy). Near here the Austrians defeated the French, 17 Nov. 1796; and were defeated by Bonaparte 14, 15 Jan. 1797. Massena was made duke of Rivoli for his share in the actions.

ROAD CLUB, established in the autumn of 1874 in London, by gentlemen interested in the revival of coaching.

ROAD MURDER. On the night of 29-30 June, 1860, Francis Savile Kent, four years old, was murdered, and his body hid in a garden water-closet at Road. His sister Constance Kent (aged sixteen), and the nurse Elizabeth Gough (the first suspected), were discharged for want of evidence. The coroner was severely blamed for charging the jury improperly, but the court of queen's bench, in Jan. 1861, refused to issue a writ for a new inquiry. Constance Kent, on 25 April, 1865, before sir Thomas Henry at Bow-street, and at her trial at Salisbury, on 21 July following, confessed herself to be guilty of the murder. Her punishment was commuted to penal servitude for life. Let out on ticket-of-leave, 18 July, 1885. Road is near Frome, Somerset.

ROADS, see *Roman Roads*. The first general repair of the highways of this country was directed about 1285. Acts were passed for the purpose in 1524 and 1555, followed by others in Elizabeth's and succeeding reigns. Roads through the Highlands of Scotland were begun by general Wade in 1726. Loudon M'Adam's roads were introduced about 1818. Wooden pavements were tried with partial success in the streets of London: at Whitehall in 1839, and in other streets in 1840; asphalte pavement soon after. An act "for the better management of the highways" was passed in 1862 after much opposition; another, 16 Aug. 1878; also regulated the use of locomotives on roads. Steam road-rollers were tried in 1867; used in London 18 March, 1868: see *Macadamising*, *Tolls*, and *Wooden Pavements*.

ROAD STEAMERS. Mr. R. W. Thomson, of Edinburgh, in 1868, by adding india-rubber to the tires of the wheels of locomotives is considered to have solved the question of steam traction on common roads. Road steamers have been successfully employed in Edinburgh and Leith for drawing heavy waggons up inclined planes, and are adaptable to any draught work. They were tried at Woolwich, 1 Oct. 1870, and reported successful by eminent authorities; and their application to ploughing by lord Dunmore was exhibited 1 Feb. 1871.

ROANOAKE, an island off N. Carolina, U.S., discovered by sir Walter Raleigh, 1584, and settled by him, 1585, without success. Other settlers also failed.

ROASTING ALIVE. An early instance is that of Bocchoris, king of Egypt, by order of Sabacon of Ethiopia, 737 B.C. *Lenglet*. Sir John Oldcastle, lord Cobham, was thus put to death in 1418, and Michael Servetus for heresy at Geneva, 27 Oct. 1553; see *Burning Alive*, and *Martyrs*.

ROBBERS were punished with death by Edmund I.'s laws, which directed that the eldest robber should be hanged. Remarkable robbers in England were Robin Hood, 1189 (see *Robin Hood*), and Claud Du Val, "executed at Tyburn," says an

historian quaintly, "to the great grief of the women," Jan. 1670. In Ireland, the famous MacCabe was hanged at Naas, 19 Aug. 1691. Galloping Hogan, the rapparee, flourished at this period. Freney, the celebrated highwayman, surrendered himself, 10 May, 1749. The accomplished Barrington was transported, 22 Sept. 1790. See *Trials*.

ROBIN HOOD, captain of a band of robbers, in Sherwood forest, Nottinghamshire; traditionally reported to have been the earl of Huntingdon, disgraced and banished the court by Richard I. at his accession (1189). Robin Hood and Little John and their band are said to have continued their depredations till 1247, when Robin died. *Stow*. Lord Tennyson's drama, "The Foresters; Robin Hood and Maid Marian," first represented at New York on account of the American copyright law, end of March, 1892.

"ROBINSON CRUSOE," by Daniel De Foe; the first part appeared in 1719. See *Juan Fernandez*. Three old ladies, Mary Ann, Jane Amelia, and Sarah Frances De Foe, lineally descended from De Foe, pensioned by the queen, May, 1877.

ROBURITE, a new German explosive invented by Dr. Carl Roth, reported 1888.

ROCHDALE, Lancashire. A charter was obtained for a market by Edmund de Lacy, 1241, and the grammar school was founded 1564. Rochdale canal was opened 1804. The new town was commenced in 1865. Rochdale first sent a member to parliament in 1832. The woollen manufacture was carried on in the 16th century. The first cotton mill was erected in 1795. Theatre royal and opera house, built in 1867, destroyed by fire, 27 Jan. 1894. Population, 1881, 68,866; 1891, 71,458.

ROCHEFORT (W. France), a seaport on the Charente. The port was made by Louis XIV. in 1666. In Aix-roads or Basque-roads, near Rochefort, capt. lord Cochrane attacked the French fleet and destroyed four ships, 11-12 April, 1809. Near Rochefort, the emperor Napoleon surrendered himself to capt. Maitland of the *Bellerophon*, 15 July, 1815.

ROCHELLE (W. France), a seaport on the Atlantic, belonging to the English for some time, but finally surrendered to the French leader, Du Guesclin, in 1372. As a stronghold of the Calvinist party, it was vainly besieged by the duke of Anjou in 1573; and was taken after a siege of thirteen months by cardinal Richelieu in 1628. The duke of Buckingham was sent with a fleet and army to relieve it; but the citizens declined to admit him. He attacked the isle of Rhé, near Rochelle, and failed, 22 July, 1627. He was repulsed 8 Nov. following. A conspiracy here in 1822 caused loss of life to sergeant Bories and others.

The new harbour opened by president Carnot 19 Aug. 1890

ROCHESTER, in Kent, the Roman *Durobrivæ*. The bishopric, founded by Augustin, 604, is the next in age to Canterbury. The first cathedral was erected by Ethelbert, king of Kent. St. Justus was bishop in 604. Alterations were made in the diocese in 1845. Rochester is valued in the king's books at 358*l*. 3*s*. 2¼*d*. per annum. Present income 3,000*l*. The cathedral re-opened after repairs of the choir, 11 June, 1875; west front and towers restored, 25 July, 1894. The old castle and grounds were purchased for the public by the Corporation, 1883. The "ten churches fund," begun by the bishop, 1884. Population, 1881, 21,307; 1891, 26,309.

ROCKETS, destructive war implements, were invented by sir William Congreve about 1803. The carcase-rockets were first used at Boulogne, 8 Oct. 1806, when they set the town on fire, their powers being previously demonstrated in the presence of Mr. Pitt and several of the cabinet ministers, 1806. Improved rockets were made by Hales in 1846. Boxer's life-saving rope-carrying rocket, for communicating with stranded vessels, described in 1878. See *Wrecks*, March, 1892.

RODNEY'S VICTORIES. Admiral Rodney fought, near Cape St. Vincent, the Spanish admiral, Don Langara, whom he defeated and made prisoner, capturing six of his ships, one of which blew up, 16, 17 Jan. 1780. On 12 April, 1782, he encountered the French fleet in the West Indies, commanded by the count de Grasse, took five ships of the line, and sent the French admiral prisoner to England: Rodney was raised to the peerage, June, 1782.

* Charles Watson Wentworth, marquis of Rockingham, was born 13 May, 1730; succeeded his father as marquis, 1750. He died without issue, 1 July, 1782; and his estates passed to his nephew, earl Fitzwilliam.

ROGATION WEEK. Rogation Sunday, the Sunday before Ascension-day, received its title from the Monday, Tuesday, and Wednesday following it, called Rogation days, derived from the Latin *rogare*, to beseech. Extraordinary prayers and supplications for these three days are said to have been appointed in the third century, as a preparation for the devout observance of our Saviour's ascension on the next day succeeding to them, denominated Holy Thursday or Ascension-day. The whole week in which these days happen is styled Rogation week; and in some parts it is still known by the other names of Crop week, Grass week, and Procession week. The perambulations of parishes have usually been made in this week.

ROHAN, an illustrious family, descended from the ancient sovereigns of Brittany. Henri de Rohan, son-in-law of the great Sully, after the death of Henry IV. (14 May, 1610), became head of the Protestant party, and sustained three wars against Louis XIII. He eventually entered the service of the duke of Saxe-Weimar, and died of wounds received in battle in 1638. Of this family was the cardinal de Rohan; see *Diamond Necklace.*

ROHILCUND, a tract of country, N.E. India, was conquered by the Rohillas, an Afghan tribe, who settled here about 1747. After aiding the sovereign of Oude to overcome the Mahrattas, they were treated with much treachery by him, and nearly exterminated. Rohilcund was ceded to the British in 1801. After the great mutiny, Rohilcund was tranquillised in July, 1858.

ROLLS' CHAPEL (London), founded by Henry III., about 1233, for receiving Jewish rabbis converted to Christianity. On the banishment of the Jews in 1290 the buildings now called the Rolls, and the chapel, were annexed by patent to the office of the keeper or master of the rolls of chancery, from which circumstance they took their name. A number of public records from the time of Richard III., kept in presses in this chapel, have been removed to the Record Office (*which see*). The Rolls chapel was pulled down in July, 1892.

ROLT'S ACT, 25 & 26 Vict. c. 42 (1862), relates to the Chancery Court.

ROMAGNA, a province of the papal states, comprised in the legations of Bologna, Ferrara, Forli and Ravenna. It was conquered by the Lombards; but taken from them by Pepin, and given to the pope, 753. Cæsar Borgia held it as a duchy in 1501, but lost it in 1503. In 1859 the Romagna threw off the temporal authority of the pope, and declared itself subject to the king of Sardinia, who accepted it in March, 1860. It now forms part of the province of Emilia, in the new kingdom of Italy. Population, 1890, 1,218,392. See *Rome.*

ROMAN LAW, see *Codes;* ROMAN LITERATURE, see *Latin.*

ROMAN ROADS IN ENGLAND. Our historians maintain, but are mistaken, that there were but four of these roads. *Camden.* "The Romans," says Isidore, "made roads almost all over the world, to have their marches in a straight line, and to employ the people;" and criminals were frequently condemned to work at such roads, as we learn from Suetonius, in his life of Caligula. They were commenced and completed at various periods, between the 2nd and 4th centuries, and the Roman soldiery were employed in making them, that inactivity might not give them an opportunity to raise disturbances. *Bede.*

1st, WATLING-STREET, so named from Vitellianus, who is supposed to have directed it, the Britons calling him in their language *Guetalin* (from Kent to Cardigan Bay).
2nd, IKNIELD, or IKENILD-STREET, from its beginning among the *Iceni* (from St. David's to Tynemouth).
3rd, FOSSE, or FOSSE WAY, probably from its having been defended by a fosse on both sides (from Cornwall to Lincoln).
4th, ERMIN-STREET, from *Irmunsul*, a German word, meaning Mercury, whom our German ancestors worshipped under that name (from St. David's to Southampton).

ROMAN WALLS. One was erected by Agricola (79 to 85) to defend Britain from the incursions of the Picts and Scots; the first wall extended from the Tyne to the Solway frith (80 miles); the second from the frith of Forth, near Edinburgh, to the frith of Clyde, near Dumbarton (36 miles). The former was renewed and strengthened by the emperor Adrian (121), and by Septimus Severus (208). It commenced at Bowness, near Carlisle, and ended at Wallsend near Newcastle. It had battlements and towers to contain soldiers. The more northern wall was renewed by Lollius Urbicus, in the reign of Antoninus Pius, about 140. Many remains of these walls still exist, particularly of the southern one; Dr. J. C. Bruce's "*Roman Wall*," published 1853-1868.

ROMANCE, originally a composition in the Romance or Provençal idiom. The term in the middle ages was extended to narrative poetry in general. Heliodorus, a bishop of Tricca, in Thessaly, about 398, was the author of *Æthiopica* (relating to the loves of Theagenes and Charieleia), the first work in this species of writing. The first part of the "Roman de la Rose" was written by Guillaume de Lorris (1226-70); the second, a separate poem, by Jean de Meung (1285-1314), the Decameron of Boccaccio was published, 1358; Don Quixote, by Cervantes, 1605; Gil Blas, by Le Sage, 1715. Dunlop's "History of Fiction," published 1814. See *English Authors;* "*Reynard the Fox.*"

ROME. The foundation of the city, by Romulus, was laid on the 20th April,* according to Varro, in the year 3961 of the Julian period (753 years before the birth of Christ, and in the fourth

* In its original state, Rome was but a small castle on the summit of mount Palatine; and the founder, to give his followers the appearance of a nation or a barbarian horde, was obliged to erect a standard as a common asylum for criminals, debtors, or murderers, who fled from their native country to avoid the punishment which attended them. From such an assemblage a numerous body was soon collected, and before the death of the founder, the Romans had covered with their habitations the Palatine, Capitoline, Aventine, and Esquiline hills, with Mounts Cœlius and Quirinalis

year of the sixth Olympiad. Other dates given: Cato, 751; Polybius, 750; Fabius Pictor, 747; Cincius, 728 B.C.). The Romans conquered nearly the whole of the then known world. In the time of Julius Cæsar, the empire was bounded by the Euphrates, Taurus, and Armenia on the east; by Æthiopia on the south; by the Danube on the north; and by the Atlantic on the west. Numerous ecclesiastical councils have been held at Rome, from 197 to 1869-70. Population, 1872, about 240,000; 1877, 250,000; 1881, 300,467; 1890, 423,217. Chiefly through the exertions of Mr. John Henry Parker of Oxford, the Roman exploration fund was established, for the preservation of ancient architectural remains. His "Archæology of Rome" (with many photographs) published, 1874-8. Professor J. H. Middleton's works on "Ancient Rome," published 1885, 1888, and 1892. The Italian government votes 1200*l.* a year for a similar purpose. The early history of Rome is legendary, and the dates *purely conjectural*. It has been greatly elucidated by the researches of B. G. Niebuhr, whose Roman history was published 1811, and 1827-30.

RÖNTGEN RAYS, see *Surgery*, 1896. Prof. W. C. Röntgen while experimenting with a Crooke's vacuum tube, electrically excited, and enveloped in a black covering, observed that some rays proceeding from the tube passed through the black paper and affected a fluorescent screen at a distance of two yards, 8 Oct. 1895. See *Vacuum*.

The continued researches proved that many substances opaque to ordinary light were transparent to these rays, as flesh, wood, &c.; the shadows of such objects thrown on a screen can be photographed; the interior of a dead monkey was photographed with great distinctness, *Lancet*, March, 1896.

The movements of the bones in living animals were exhibited by these rays by means of a cinematograph, in 1897 *et seq.* These rays have the power of discelectrifying electrified bodies.

The rays are much utilized in surgery; 416 cases at St. Thomas's hospital were reported in 1897.

ROSE, see under *Flowers*. The rose, a symbol of silence, gave rise to the phrase *sub rosâ*, "under the rose;" said, by Italian writers, to have risen from the circumstance of the pope's presenting consecrated roses, which were placed over the confessionals at Rome, to denote secrecy, 1526. The pope sent a *golden rose* to the queen of Spain, which was given to her with much solemnity, 8 Feb. 1868. A "national rose society" opened its first annual show, St. James's hall, 4 July, 1877.

ROSE'S ACT, 33 Geo. III. c. 54 (1793) brought benefit societies under the control of government.

ROSES, WARS OF THE, between the Lancastrians (who chose the red rose as their emblem) and the Yorkists (who chose the white rose), 1455-1485. It is stated that in the Wars of the Roses there perished 12 princes of the blood, 200 nobles, and 100,000 gentry and common people. The union of the roses was effected in the marriage of Henry VII. with the princess Elizabeth, daughter of Edward IV. 1486.

Richard II., who succeeded his grandfather Edward III. in 1377, was deposed and succeeded in 1399 by his cousin Henry IV. (son of John of Gaunt, duke of Lancaster, the fourth son of Edward III.), in prejudice to the right of Roger Mortimer (grandson of Lionel, duke of Clarence, Edward's *third* son), who was declared presumptive heir to the throne in 1385
Roger's grandson, Richard duke of York, first openly claimed the crown in 1449
Attempts at compromise failed, and the war began in 1455
The Lancastrians were defeated at St. Alban's; the protector Somerset was slain; a truce was made, and Richard was declared successor to Henry VI. 23 May, 1455
The war was renewed, and the Yorkists defeated the Lancastrians at Bloreheath . . 23 Sept. 1459
The Yorkists eventually dispersed, and the duke was attainted.
He defeated his opponents at Northampton, took Henry prisoner, and was declared heir to the crown; but fell into an ambuscade near Wakefield, and was put to death . . . 31 Dec. 1460
His son (Edward) continued the struggle; was installed as king . . . . . 4 March, 1461

Was deposed by Warwick, who restored Henry VI. Sept. 1470

ROSETTA (in Egypt), taken by the French in 1798; and by the British and Turks, 19 April, 1801. The Turks repulsed the British here, 22 April, 1807. Near Rosetta was fought the battle of the Nile, 1 Aug. 1798; see *Nile*. Mehemet Ali rendered great service to his country by constructing a canal between Rosetta and Alexandria.

The *Rosetta Stone*, discovered by the French in 1799, was brought from Rosetta in a French vessel, from whence it was taken by Mr. Wm. R. Hamilton, who deposited it in the British Museum. In 1841, Mr. Letronne published the text and a translation of the Greek inscription. It is a piece of black basalt, about 3 feet long and 2½ feet wide, with an inscription in three languages, viz., hieroglyphics, modified hieroglyphics (demotic or enchorial), and Greek, setting forth the praises of Ptolemy Epiphanes (about 196 B.C.). It was studied by Dr. T. Young and especially by J. F. Champollion, whose works were published 1814–1845. Champollion's method was adopted by Rosellini, and extended by Lepsius, Bunsen, Birch, Brugsch, and others. Champollion discovered that the hieroglyphs represented sounds by an initial letter, and after studying the "Ritual of the dead," published a grammar and dictionary.

ROSICRUCIANS, a sect of mystical philosophers who appeared in Germany in the 14th century. It is asserted that their founder was a noble German monk named Christian Rosencreutz, born 1378, who travelled in Arabia, Egypt, Africa, and Spain; returned to Germany and founded the fraternity of the Rosy Cross, and died aged 102. The *Fama Fraternitatis* and the *Confessio Roseæ Crucis*, 1615, the latter attributed to Johann Valentin Andreas and others, are important works. They swore fidelity, promised secrecy, and wrote hieroglyphically, and affirmed that the ancient philosophers of Egypt, the Chaldeans, Magi of Persia, and Gymnosophists of the Indies, taught the same doctrine.

Mr. Arthur E. Waite's elaborate work "The Real History of the Rosicrucians" published in 1887.

Having had dealings with the landgrave of Hesse, that prince entrusted him with his treasure (said to have been 250,000*l.*) in 1806, when the French held his country. With this sum as capital, Anselm traded and made a large fortune, and restored the 250,000*l.* to the landgrave in 1815. At his death his sons continued the business as partners. His son, Nathan, began at Manchester in 1798, removed to London in 1803; and died immensely rich, 28 July, 1836. The baron, James, head of the family, died at Paris, 15 Nov. 1868.

The first printed collection appeared in 1609. Warren's collection published 1763-94. Round, Catch, and Canon club founded in 1843.

ROUND-HEADS. In the civil war which began in 1642, the adherents of Charles I. were called Cavaliers, and the friends of the parliament Round-heads. The term, it is said, arose from those persons who had a round bowl or dish put upon their heads, and their hair cut to the edge of the bowl; see *Cavaliers*.

ROYAL ACADEMY. A society of artists met in St. Peter's-court, St. Martin's-lane, about 1739, which Hogarth established as the society of Incorporated Artists, who held their first exhibition at the Society of Arts, Adelphi, 21 April, 1760. From this sprang the Royal Academy, in consequence of a dispute between the directors and the fellows. On 10 Dec. 1768, the institution of the present Royal Academy was completed under the patronage of George III.; and sir Joshua Reynolds, knighted on the occasion, was appointed its first president. *Leigh.* The first exhibition of the academicians (at Pall-Mall) was on 26 April, 1769, when 136 works appeared. In 1771 the king granted them apartments in old Somerset-house, and afterwards, in 1780, in new Somerset-house, where they remained till 1838, when they removed to the National Gallery. Among the professors have been Johnson, Gibbon, Goldsmith, Macaulay, and Hallam. Turner, the painter, gave funds to the academy for the award of a medal triennially for landscape-painting, which was awarded to Mr. N. O. Lupton in 1857. A commission of inquiry into the affairs of the academy, appointed in 1862, recommended various changes in July, 1863, which were carried into effect. The hundredth anniversary of the foundation of the academy was celebrated 10 Dec. 1868. The Royal Academy held its first exhibition in the new building, 3 May, 1869. The annual exhibition of pictures by the old masters, with some British, began 3 Jan. 1870. The money received has been devoted to the establishment of a professorship of chemistry and a laboratory, &c. In 1874 the exhibition included many of Landseer's pictures.

Sir Francis Chantrey, sculptor, died 25 Nov. 1841. At the death of his wife Jan. 1875, in conformity with his will, about 3000*l.* a year accrued to the Academy for the purchase of works of art for the nation, and other purposes.

The court of appeal upholds Mr. justice North's decision that the works of sculpture purchased must be finished in marble or bronze, and not models, June, 1889.

The gallery containing the sculptures of John Gibson, bequeathed by him, was opened free, 27 Nov. 1876.

The number of the works of art exhibited in 1789 was about 620, in 1889, 2196, including sculptures.

ROYAL INSTITUTION OF GREAT BRITAIN, the earliest of the kind in London, was founded 9 March, 1799, by count Rumford, sir Joseph Banks, earls Spencer and Morton, and several other noblemen and gentlemen. It received the immediate patronage of George III., and was incorporated 13 Jan. 1800, by royal charter, as "The Royal Institution of Great Britain, for the diffusing knowledge, and facilitating the general introduction of useful mechanical inventions and improvements, and for teaching, by courses of philosophical lectures and experiments, the application of science to the common purposes of life." It was enlarged and extended by an act of parliament in 1810; the original plan, as drawn up by count Rumford, in 1799, having been considerably modified. The members are elected by ballot, and pay ten guineas on admission, and five guineas annually, or a composition of sixty guineas. "The Royal Institution, its Founder, and its first Professors," by Dr. Bence Jones, hon. sec., published 1871.

The HOUSE (in Albemarle-street, Piccadilly) was purchased in June, 1799, and the present front was added by subscription in 1838. The Lecture theatre was erected in 1800–1, under the superintendence of Mr. T. Webster.

The Laboratory established in 1800; was rebuilt, with the modern improvements, 1872.

The LIBRARY was commenced in 1803, by the munificent subscriptions of the proprietors of the institution, It now comprises about 60,000 volumes. Classified catalogues (by W. Harris) were published in 1809 and 1821; new ones (by B. Vincent) in 1857 and 1882.

The MUSEUM contains original philosophical apparatus of Young, Cavendish, Davy, Faraday, and De la Rue.

The first LECTURE was delivered 4 March, 1800, by *Dr. Garnett*, he being the first professor of natural philosophy and chemistry.

In Aug. he was succeeded by *Dr. Thomas Young*, so celebrated for his researches in optics, resulting in the discovery of the interference of light, and the establishment of the theory of undulation. His "Lectures on Natural Philosophy and the Mechanical Arts," first published in 1807, are still considered a text-book of physical science. His works on antiquarian literature (hieroglyphic inscriptions, &c.) are highly esteemed.

In Feb. 1801, Mr. (afterwards sir *Humphry*) *Davy* was engaged as assistant lecturer and director of the laboratory, and on 31 May, 1802, he was appointed professor of chemistry. His lectures were eminently successful, and his discoveries in chemistry and electricity have immortalised his name, and conferred honour on the institution. By him the alkaline metals potassium and sodium, were discovered in 1807; the nature of chlorine was determined in 1810, and the safety-lamp invented in 1815.

William Thomas Brande succeeded sir Humphry Davy as professor of chemistry in 1813, and held that office till his resignation in 1852, since which time, till his death (Feb. 1866), he was hon. professor. From 1816 to 1850 he delivered, in the laboratory of this institution, his celebrated chemical lectures to students.

In 1813 *Michael Faraday* (born 22 Sept. 1791), on the recommendation of sir H. Davy, was engaged as assistant in the laboratory, and in 1825 as its director; in 1827 he became one of the permanent lecturers of the institution. In 1820 he commenced those researches in electricity and magnetism which form an era in the history of science. In 1823-4 he discovered the condensability of chlorine and other gases; in 1831 he obtained electricity from the magnet; in 1845 he exhibited the two-fold magnetism of matter, comprehending all known substances, the magnetism of gases, flame, &c.; in 1850 he published his researches on atmospheric magnetism: died, 25 Aug. 1867.

John Tyndall, F.R.S., professor of natural philosophy, July, 1853, hon. professor, 9 May, 1887; died 4 Dec. 1893; eminent for his researches on magnetism, heat, glaciers, &c.; bequeathed 1,000*l.* to the Royal Institution, received Jan. 1808.

Lord Rayleigh, F.R.S., professor of natural philosophy, 9 May, 1887; is eminent for his researches on sound, light, &c.

Edward Frankland, F.R.S., professor of chemistry 1863-8, is eminent for his discoveries in organic chemistry.

In 1804, sir J. St. Aubyn and other gentlemen proposed to form a SCHOOL OF MINES at this institution; but the plan, although warmly supported by the members, was withdrawn for want of encouragement by the government and by mining proprietors.

The WEEKLY EVENING MEETINGS, on the Fridays, from January to June, as now arranged, commenced in 1826. Discourses (of which abstracts have been printed, 1851 *et seq.*) are given at these meetings by the professors of the institution, and other eminent scientific men.

ENDOWMENTS. In 1833, John Fuller, esq., of Rosehill, endowed two professorships, of chemistry and physiology; the former bestowed on Mr. Faraday for life; succeeded by Dr. Wm. Odling, 1868-73; by Dr. John Hall Gladstone, 1874; by James Dewar, 1877. The latter on Dr. Roget for three years, to be filled up afterwards by triennial election.—The Fullerian professors of physiology have been P. M. Roget, R. E. Grant, T. R. Jones, W. B. Carpenter, W. W. Gull, T. W. Jones, T. H. Huxley (*twice*), R. Owen, J. Marshall, Michael Foster, Wm. Rutherford, Alfred H. Garrod, and E. A. Schäfer (1878-81), J. G. McKendrick, 1881-4; A. Gamgee, 1884; G. J. Fownes; in 1851 to Mr. T. Wharton Jones; in 1858 no award was made; in 1865 to Mr. George Warington; in 1872 to Rev. George Henslow and B. Thompson Lowne; in 1879, to Mr. G. S. Boulger; in 1886, to Prof. (aft. sir) G. G. Stokes, Pres. R.S.; Miss Agnes M. Clerke, 1893.

The "Fund for the Promotion of Experimental Research" was founded on 6 July, 1863, by sir Henry Holland, Professor Faraday, sir R. I. Murchison, Dr. Bence Jones, and others.

Many donations received, 1863, *et seq.*; since 1892 liberal donations have been received to support prof. Dewar's researches connected with low temperatures: Mr. Thomas G. Hodgkins, of Long Island, New York, 100,000 dollars; Goldsmiths' company, 1,000*l.*; reported 7 Nov. 1892. The earl of Derby bequeaths 2000*l.*, 21 April, 1893, *et seq.*; Mr. Ludwig Mond, 1887–93, 1,540*l.*; others since, 1898.

In 1843 the establishment of a school of practical chemistry in the institution approved by profs. Faraday and Brande was proposed but failed.

On 2 July, 1894, the scheme was revived by Mr. Ludwig Mond, F.R.S. and M.R.I., who presented to the institution the house adjoining, with a proposal for its transformation into a laboratory, to be termed the DAVY–FARADAY RESEARCH LABORATORY. He supplied the funds necessary for the incidental expenses of the work, and also gave an endowment sufficient to maintain a staff of professors and assistants, and to supply everything necessary for the prosecution of scientific

research, especially in pure chemistry and physical science. The laboratory is an adjunct to the Royal Institution, and is open, conditionally, to independent private research. The conveyance and deed of trust dated 8 June, 1896. The laboratory is subject to a committee appointed by the managers of the institution, the first directors being lord Rayleigh and prof. James Dewar. Dr. Alexander Scott appointed superintendent, 1896. The laboratory was opened by the prince of Wales, after an historical address by Dr. Ludwig Mond, followed by experiments in liquid air, by prof. Dewar, 22 Dec. *Times*, 23 Dec. 1896.

ROYAL SOCIETY (London). In 1645 several learned men met in London to discuss philosophical questions and report experiments; the *Novum Organon* of Bacon, published in 1620, having given great impulse to such pursuits. Some of them (Drs. Wilkins, Wallis, &c.), about 1648-9, removed to Oxford, and with Dr. (afterwards bishop) Seth Ward, the hon. Robert Boyle, Dr. (afterwards sir) W. Petty, and several doctors of divinity and physic, frequently assembled in the apartments of Dr. Wilkins, in Wadham college, Oxford. They formed what has been called the Philosophical Society of Oxford, which only lasted till 1690. The members were, about 1658, called to various parts of the kingdom, on account of their respective professions; and the majority coming to London, constantly attended the lectures at Gresham college, and met occasionally till the death of Oliver Cromwell, 3 Sept. 1658; see *Societies*, and *Scientific Papers.*

The society was organised in 1660, and constituted by Charles II. a body politic and corporate, by the appellation of "The President, Council, and Fellowship of the Royal Society of London, for improving Natural Knowledge," 22 April, 1662.

Henry Oldenburg, the first secretary, an eminent philosopher, a native of Bremen, a friend of Milton, Boyle, Wilkins, Wallis and Petty, died Sept. 1677.

Evelyn records the first anniversary meeting, St. Andrew's-day, 30 Nov. 1663.

The *Philosophical Transactions* begin 6 March, 1664-5.

In 1668 Newton invented his reflecting telescope (now in the possession of the society), and on 28 April, 1686, presented to the society the MS. of his *Principia*, which the council ordered to be printed. This was done under the superintendence and at the expense of Halley the astronomer, at that time clerk to the society.

The society met for some years at Gresham College, and afterwards at Arundel House (1666), where it came into possession of a valuable library, presented by Mr. Howard, grandson of its collector, the earl of Arundel. After various changes the fellows returned to Gresham College, where they remained till their removal to Crane-court, in a house purchased by themselves, 8 Nov. 1710.

The Croonian lecture was founded in 1701; The Bakerian lecture by Henry Baker, 1774.

The first Copley medal was awarded to Stephen Gray in 1731; the royal medal to John Dalton, 1826; the Rumford medal (instituted in 1797) to count Rumford himself in 1800.

The society remove to apartments granted them in Somerset-house, 1780; to apartments in Burlington-house, Piccadilly, 1857.

Parliament votes annually 4000*l.* to the Royal Society for scientific purposes; raised to 5,000*l.* in 1895.

Regulations made by which only fifteen fellows are to be annually elected, who pay ten pounds on admission, and four pounds annually, or a composition of sixty pounds, March, 1847. In consequence, the number of fellows was reduced from 839 in 1847, to 626 in 1866; to 567 in 1875; to 552 in 1877; to 523 in 1888; 511 in 1893.

RUBICON, a small river flowing into the Adriatic sea, separated Cisalpine Gaul from Italy proper. Roman generals were forbidden to pass this river at the head of an army. Julius Cæsar did so, Jan. 49 B.C., and thereby began a revolt and deadly civil war.

RUBIDIUM, an alkaline metal, discovered by Bunsen by means of the spectrum analysis, and made known in 1861.

RUBRICS, directions in church offices, often printed in red. New ones for the English service agreed to by convocation, 4 July, 1879.

RUBY MINES OF BURMAH, Tavernier (middle of the 17th century) describes it as a place where rubies and other precious stones are largely obtained, in a country difficult of access. Similar accounts were given by Father Giuseppe d'Amato, about 1830. The largest stones were royal property. Mr. Bredemeyer had charge of these and other mines in 1868. Revenue about 1855, from 12,500*l.* to 15,000*l.* per annum. These mines are now British property (see under *Burmah*, 1885), and for the use of them a revenue is paid by the Shan tribes, 1887. An agreement respecting them made between the Indian Government and Messrs. Streeter & Co. of London, announced May, 1887; suspended July, 1887. Working licences issued to persons on the spot, 1887. Lease for seven years to the Streeter Syndicate signed at the India office, 22 Feb. 1889; formation of a company headed by Messrs. Rothschild, March *et seq.*, 1889. Visit of sir Lepel Griffin to the mines, satisfactory to the company, reported March, 1890. Affairs unsettled, 30 April, 1893.

RUFFLES became fashionable about 1520; and went out about 1790.

RUGBY SCHOOL (Warwickshire), was founded in 1567 by Lawrence Sheriff, a London tradesman; its arrangements were affected by the Public Schools act 1868. Dr. Thomas Arnold, the historian, entered on the duties of head-master here in August, 1828, and under him the school greatly prospered. He died 12 June, 1842. His successors were Drs. Tait, Goulbourn, Temple, and Hayman. See *New Rugby*.

Dr. H. Hayman was opposed by the masters of the school, and after much dissension and discussion, was dismissed by the trustees, Dec. 1873, and Dr. Jex Blake elected in his room, Feb. 1874. Succeeded by Rev. J. Percival, Nov. 1886 (created bp. of Hereford, 1895); the rev. H. A. James elected, 21 March, 1895. Vice-Chancellor Malins decided against Dr. Hayman in his attempt to set aside his dismissal, but expressed his own opinion on "the grievous hardship of Dr. Hayman's case," 21 March, 1874.

Mr. Disraeli, the premier, presented Dr. Hayman to the living of Aldingham, Lancashire, April, 1874.

Population of Rugby in 1881, 9,891; 1891, 11,262.

"RULE, BRITANNIA." The words are by James Thomson (altered by Mallet); the music, ascribed to Dr. Arne, is said by Schœlcher (in his life of Handel) to have been taken from an air in Handel's "Occasional Oratorio" composed 1746, but the song and music were really printed in Dr. Arne's masque of "Alfred," 1740. *Grove*.

RULE-OF-THE-ROAD, see *Seas*.

RULING MACHINES, used for ruling paper with faint lines, for merchants' account-books, &c. They were invented by an ingenious Dutchman, resident in London, in 1782, and were subsequently greatly improved by Woodmason, Payne, Brown, and others. They were improved in Scotland in 1803. An invention has lately rendered account-books perfect by the numbering of the pages with types, instead of the numbers being written by a pen, so that a page cannot be torn out from them without being discovered. The late Herr F. A. Nobert devised a ruling machine in 1845 for the production of microscopical test plates, diffraction gratings, and micrometers, specimens of which were exhibited in 1851. The test plates contain bands of lines in a graduated series of fineness from $\frac{1}{1000}$ to $\frac{1}{20000}$ of a Paris line.

The duty (since 1858) on colonial rum imported into the United Kingdom is 8*s.* 2*d.* per gallon. The duty on rum to be employed as methylated spirits was reduced in 1863.

Alphabetic characters, probably of Phœnician origin, but popularly ascribed to the god Odin, cut or scratched on stone monuments, weapons, ornaments, implements, &c., which have been hypothetically dated from 1000 B.C. to 1000 A.D.; principally found in Scandinavia and England, and sometimes in Western Europe. When he requested to have some one near him to take notes to help his memory, he was answered, that any of his attendants might assist him ; upon which he said "My WIFE is here, and will do it for me." He was beheaded in Lincoln's-Inn-Fields, 21 July, 1683. Lady Russell survived him forty years, dying 29 Sept. 1723, in her eighty-seventh year. His attainder was reversed, 1 Will. III. 1689.

RUSSIA, the eastern part of ancient Sarmatia. The name is generally derived from the Roxolani, a Salvonic tribe. Ruric, a Varangian chief, appears to have been the first to establish a government, 862. His decendants ruled amid many vicissitudes till 1598. The progress of the Russian power under Peter the Great and Catherine II. is unequalled for rapidity in the history of the world. The established religion of Russia is the Greek church, with toleration of other sects, even Mahometans. By an imperial ukase, in 1802, six universities were established, viz., at St. Petersburg, Moscow, Wilna, Dorpat (in Livonia), Charcov, and Kasan ; but literature made little progress till the present century, the native publications being very few, and the best books being translations. The Russian language, though not devoid of elegance, is, to a foreigner, of very difficult pronunciation ; the number of letters and diphthongs is forty-two. The Anglo-Russian Literary Society, with library, &c., set up at the Imperial Institute, 1893. The population of the empire in 1867, 82.159,630; in 1872, about 85,685,945; in 1877 (estimated), 86,952,347; in 1885, 108,843,192, 1st general census of the empire, total, 129,211,113, 9 Feb. 1897. By the first Russian budget (1862), the estimated revenue was 34,500,000*l.* ; expenditure, 37,850,000*l* ; 1892, revenue, 118,025,000*l.* ; expenditure, 112,549,000*l.* ; 1897, revenue (estimate), 142,823,037*l.* ; expenditure the same. Besides about 500 cathedrals, about 35,000 churches (Greek church, *which see*).

RUSSO-TURKISH WAR.* The Russian and French governments having each taken a side in the dispute between the Greek and Latin churches as to the exclusive possession of the *Holy Places* (*which see*) in Palestine, the Porte advised the formation of a mixed commission, which decided in favour of the Greeks, and a firman was promulgated accordingly, 9 March, 1853 : to this decision the French acceded, although dissatisfied.

The Russians make further claims, and prince Menschikoff (who arrived at Constantinople 28 Feb. 1853), by various notes (between 22 March and 18 May), demands that a convention should be signed by the sultan granting to the czar such a protectorate over the Greek Christians in Turkey, as the sultan considered inimical to his own authority . . . . 22 March-18 May, 1853

Reply of the Porte to the note of Dec. 5, containing four points as bases of negotiation : viz., 1. The promptest possible evacuation of the principalities. 2. Revision of the treaties. 3. Maintenance of religious privileges to the communities of all

* In 1844, when the czar was in England, he conversed with the duke of Wellington and lord Aberdeen (whom he had known many years) respecting the dissolution of the Turkish empire ; and on his return he embodied his views in a memorandum drawn up by count Nesselrode, which was transmitted to London, but kept secret till March, 1854. In January and February of that year the czar had several conversations on the subject with the British envoy at St. Petersburg, sir G. H. Seymour, in one of which (Jan. 14) he compared Turkey to a "sick man" in a state of decrepitude, on the point of death, and made proposals to the British government as to the disposal of his property. He stated frankly that he would not permit the British to establish themselves at Constantinople ; but said in another conversation, he would not object to their possessing Egypt. The purport of these conversations was conveyed in despatches to lord John Russell, who replied that the British government declined to make any provision for the contingency of the fall of Turkey. The czar made similar proposals o the French government with the same result.

RYE-HOUSE PLOT, a plot (some think pretended) to secure the succession of the duke of Monmouth to the throne in preference to the duke of York (afterwards James II.), a Roman catholic. Some of the conspirators are said to have projected the assassination of the king, Charles II., and his brother. This design is said to have been frustrated by the king's house at Newmarket acciden-

tally taking fire, which hastened the royal party away eight days before the plot was to take effect, 22 March, 1683; see *Newmarket*. The plot was discovered 12 June following. Lord William Russell on 21 July, and Algernon Sidney on 7 Dec. following, suffered death for being concerned in this conspiracy. Both were illegally convicted. The name was derived from the conspirators' place of meeting, the Rye-house at Broxbourne, Hertfordshire.

S.

SAALFIELD (Saxony, N. Germany). Here the Prussians, under prince Louis of Prussia, were defeated and their leader slain by the French under Lannes, 10 Oct. 1806.

SAARBRÜCK, the Roman *Augusti Muri* or *Saræ pons*, an open town on the left bank of the Saar, in Rhenish Prussia, founded in the tenth century, long subject to the bishops of Metz, afterwards ruled by counts (about 1237), and by the house of Nassau about 1380. It was captured by the French and retaken by the Germans 1676, reunited to France 1794-1814, and ceded to Prussia, 1815. On 2 Aug. 1870, it was bombarded by the French under Frossard (between 11 and 1 in the daytime), and the Prussians in small force were dislodged, and the town occupied by the French general Bataille. The mitrailleuses were said to be very effective. The emperor Napoleon, who was present with his son, said in a telegram to the empress, "Louis has gone through his baptism of fire. He has not been in the least startled. We stood in the foremost rank, and the rifle balls were dropping at our feet, and Louis picked up one that fell near him. His bearing was such as to draw tears from the soldiers' eyes." On the 6 Aug. the Prussian generals Gœben and Von Steinmetz, with the first army, recaptured Saarbruck, after a sanguinary conflict at the village of Spicheren. The heights taken by the French on the 2nd are in Germany, those taken by the Germans on the 6th are in France, and both battles were fought between Saarbruck and the town of Forbach, which was captured and has given a name to the second conflict. The loss was great on both sides. The French general François was killed, and the 2nd corps under Frossard nearly destroyed. The French retreated to Metz. They were greatly superior in numbers at the beginning of the fight, but were badly commanded.

SABBATARIANS. Traces exist of Sabbatarii, or Sabbathaires, among the sects of the 16th century on the continent. Upon the publication of the "Book of Sports" in 1618, a violent controversy arose among English divines on two points: first, whether the Sabbath of the fourth commandment was in force among Christians; and secondly, whether, and on what ground, the first day of the week was entitled to be distinguished and observed as "the Sabbath." In 1628, Theophilus Brabourne, a clergyman, published the first work in favour of the Seventh-day or Saturday, as the true Christian Sabbath. He and several others suffered great persecution for this opinion; but after the restoration there were three or four congregations observing the last day of the week for public worship in London, and seven or eight in the country parts of England. In 1851 there were three Sabbatarian or Seventh-day Baptist congregations in England; but in America (especially in the New England states) they are more numerous.—Joseph Davis suffered imprisonment in 1670. He and his son bequeathed property to maintain the sect; and litigation respecting its disposal was settled by vice-chancellor Stuart in conformity with their intentions in June, 1870. Very few Sabbatarians then remained. The rev. Wm. Mead Jones, an eminent seventh-day Baptist in London, a profound scholar; died 22 Feb. 1895.

SABBATH: ordained by God. *Gen.* ii.; *Exod.* xx. 8; *Isaiah* lviii. 13. Jews observe the seventh day in commemoration of the creation of the world, and of their redemption from the bondage of the Egyptians; Christians observe the first day of the week in commemoration of the resurrection of Christ from the dead, and the redemption of man; see *Sunday*.

SABBATH SCHOOLS, see *Sunday Schools*.

SABBATICAL YEAR: a Jewish institution, 1491 B.C. *Exodus* xxiii. During every seventh year the very ground had rest, and was not tilled; and every forty-ninth year all debts were forgiven, slaves set at liberty, and estates, &c., that were before sold or mortgaged, returned to their original families, &c.

SABELLIANISM, from Sabellius (of Ptolemais in Egypt), who flourished in the 3rd century, and who taught that there was but *one* person in the Godhead, the other persons of the Trinity being but different names of the same person. This doctrine was condemned at a council at Rome, 260.

SABINES, an ancient people of central Italy, from whom the Romans, under Romulus, took away their daughters by force, having invited them to some public sports or shows on purpose. When the Sabines determined to revenge this affront, the women became mediators to their fathers in behalf of their husbands, the Romans, and a lasting peace was made between them, 750 B.C. The Sabines, who had supported the Samnites in their war with Rome, were thoroughly defeated by M. Curius Dentatus, and their lands annexed 290 B.C., and eventually the Sabines were combined with the Roman people. One of the ecclesiastical provinces is still called Terra Sabina; chief town, Magliano.

SACRAMENT (from *sacramentum*, an oath, obligation, also mystery). The Christian sacraments are baptism and the Lord's Supper. The council of Trent, in 1547, affirmed the doctrine of the schoolmen that there are *seven* sacraments: baptism, the Lord's Supper, confirmation, penance, holy orders, matrimony, and extreme unction. The name was given to the Lord's Supper by the Latin fathers. The wine was restricted to the clergy about the beginning of the 12th century. Communion in one kind only was authoritatively sanctioned by the council of Constance, 15 June, 1415. Henry VII. of Germany was poisoned by a priest by the consecrated wafer, 24 Aug. 1313. The sacramental wine

was poisoned by the gravedigger of the church at Zürich, by which sacrilegious deed a number of persons lost their lives, 4 Sept. 1776. In 1614 members of both houses of parliament were ordered to take the sacrament, as a guard against the introduction of Roman Catholics. In 1673 the test act was passed; repealed in 1828; see *Transubstantiation.*

"Society of the Blessed Sacrament" (English churchmen), London, founded, 1860; "Confraternity of the Blessed Sacrament," founded 1862; the two united, 1867.

SACRED BOOKS OF THE EAST. The publication of translations of the sacred books of the religion of the Brahmans, Buddhists, and Mohammedans, and of the followers of Khung-fu-tze and Lao-tze, edited by professor Max Müller, began in 1879. Thirty volumes have been published, 1889.

SACRED HEART OF JESUS; a form of devotion said to have been instituted in England in the seventeenth century, and much promoted by Marguerite Marie Alacoque, an enthusiastic French nun, who asserted that Christ had appeared to her, and taken out her heart, placed it in his own, glowing in flame, and then returned it. She died in 1690.

Her book "Dévotion au Cœur de Jesus," published in 1698, much advocated by father Joseph Gallifet about 1726; and introduced into France, by request 1765

SACRED WARS.—I. Declared by the Amphictyons against Cirrha, near Delphi, for robbery and outrage to the visitors to the oracle, 595 B.C. Cirrha was razed to the ground, 586.—II. Between the Phocians and Delphians for the possession of the temple at Delphi, 448, 447.—III. The Phocians, on being fined for cultivating the sacred lands, seized the temple, 357. They were conquered by Philip of Macedon, and their cities depopulated, 346. See *Crusades.*

SACRIFICE was offered to God by Abel, 3875 B.C. Sacrifices to the gods were introduced into Greece by Phoroneus, king of Argos, 1773 B.C. Human sacrifices seem to have originated with the Chaldeans, from whom the custom passed into other Eastern nations. All sacrifices to the true God were to cease with the sacrifice of Christ, 33 A.D. *Heb.* x. 12-14. Pagan sacrifices were forbidden by the emperor Constantius II. 341.

SACRILEGE. In 1835, the punishment (formerly death) was made transportation for life. By 23 & 24 Vict. c. 96, s. 50 (1861), breaking into a place of worship and stealing therefrom was made punishable with penal servitude for life.

SACRIPORTUS (Latium, Italy). Here Sylla defeated the younger Marius and Papirius Carbo with great slaughter, B.C. 82, and became dictator, 81.

SADDLES. In the earlier ages the Romans used neither saddles nor stirrups. Saddles were in use in the 3rd century, and are mentioned as made of leather in 304, and were known in England about 600. Side-saddles for ladies were introduced by Anne, queen of Richard II. in 1388. *Stow.*

SADDUCEES, a Jewish sect, said to have been founded by Sadoc, a scholar of Antigonus, about 200 B.C., who, misinterpreting his master's doctrine, taught that there was neither heaven nor hell, angel nor spirit; that the soul was mortal, and that there was no resurrection of the body from the dead. The Sadducees rejected the oral law, maintained by the Pharisees. See *Matt.* xxii. 23; *Acts* xxiii. 8.

SADLER'S WELLS (N. London), so called after Mr. Sadler, who built an orchestra to entertain the invalids who used the waters medicinally, 1683. In time the orchestra was enclosed, and the building became a place for dramatic performances. The theatre was opened in 1765. Eighteen persons were trampled to death at this theatre, on a false alarm of fire, 18 Oct. 1807; see under *Theatres.* The theatre put up to auction and not sold, 31 Aug. 1875; and 30 July, 1878.

SAFES. A National Safe Company, London, opened vaults for storage of valuables, 1876.

SAFETY LAMP. One was invented in 1815 by sir Humphry Davy, to prevent accidents which happen in coal and other mines. The safety-lamp is founded on the principle that flame, in passing through iron-wire meshes, loses so much of its heat as to be incapable of igniting inflammable gases. The father of all safety-lamps was Dr. Reid Clanny, of Sunderland, whose invention and improvements are authenticated in the *Transactions of the Society of Arts* for 1817. The "Geordy," constructed by George Stephenson, the engineer, in 1815, is said to be the safest. A miner's electric light, by MM. Dumas and Benoit, was exhibited in Paris on 8 Sept. 1862. On 14 Aug. 1867, safety-lamps were rigidly tested by several mining engineers, and serious doubts thrown upon their complete efficacy. Col. Shakespear's safety lamp (light extinguished by opening) exhibited at Royal Institution, &c., May, 1879. Messrs. Fleuss and Foster's new safety mining lamp approved, Jan. 1884.

National councils or parliaments were repeatedly held at Salisbury, particularly in 1296, by Edward I.; in 1328, by Edward III.; and in 1384. Henry Stafford, duke of Buckingham, was executed here by order of Richard III., in 1483.—On SALISBURY PLAIN is Stonehenge (*which see*). This plain was estimated at 500,000 acres. On it were so many cross roads, and so few houses to take directions from, that Thomas, earl of Pembroke, planted a tree at each milestone from Salisbury to Shaftesbury, for the traveller's guide. The autumn military manœuvres took place on Salisbury Plain, Aug., Sept. 1872; again 31 Aug., 1898; see under *Army*.—The first seat of the BISHOPRIC was at Sherborne, St. Aldhelm being prelate, 705. SALT (chloride of sodium, a compound of the gas chlorine and the metal sodium) is procured from the rocks in the earth, from salt-springs, and from sea-water. The famous salt-mines of Wielitzka, near Cracow in Poland, have been worked 600 years. The salt-works in Cheshire, called the WICHES (Nantwich, Northwich, and Middlewich), were of great importance in the time of the Saxon heptarchy. The salt-mines of Staffordshire were discovered about 1670. Salt duties were first exacted in 1702; they were renewed in 1732; reduced in 1823; and in that year were ordered to cease in 1825. During the French war the duty reached to 30*l.* per ton. For the salt-tax in France see *Gabelle*. The government salt monopoly in India was abolished in May, 1863, by sir C. Trevelyan. Since 1797 salt has been largely employed in the manufacture of chloride of lime or bleaching powder (by obtaining its chlorine), and soap (by obtaining its soda). On this are based the chemical works of Cheshire, Lancashire, and other places. See under *Alkalies*.

Much distress in the salt districts of Cheshire through the subsidence of land, 1887–8. The proprietors of the Cheshire salt mines combined to form a "trust" or syndicate in the autumn of 1888; central office, Northwich; the trade being nearly ruined by great competition, first meeting 27 Sept. 1888.

SALT-PETRE (from *sal petræ*, salt of the rock), or Nitre, is a compound of nitric acid and potash (nitrogen, oxygen, and potassium), and hence is called nitrate of potash. It is the explosive ingredient in gunpowder, many detonating powders, and lucifer matches. Boyle in the 17th century demonstrated that salt-petre was composed of aqua fortis (nitric acid) and potash; the discoveries of Lavoisier (1777) and Davy (1807) showed its real composition. Its manufacture in England began about 1625. During the French revolutionary war, the manufacture was greatly increased by the researches of Berthollet.

SALUTE AT SEA. It is a received maxim at sea, that he who returns the salute always fires fewer guns than he receives, which is done even between the ships of princes of equal dignity; but the Swedes and Danes return the compliment without regarding how many guns are fired to them. The English claim the right of being saluted first in all places, as sovereigns of the seas; the Venetians claimed this honour within their gulf, &c. The admiralty issued a code of rules for salutes, Dec. 1876. See *Flag*, and *Naval Salute*.

SAMARITANS. Samaria was built by Omri, 925 B.C.; and became the capital of the kingdom of Israel. On the breaking up of that kingdom (721 B.C.), the conqueror Shalmaneser placed natives of other countries at Samaria. The descendants of these mixed races were abominable to the Jews, and much more so in consequence of the rival temple built on Mount Gerizim by Sanballat the Samaritan, 332 B.C., which was destroyed by John Hyrcanus, 130 B.C.; see *John* iv. & viii. 48, and *Luke* x. 33. The Samaritan Pentateuch (of uncertain origin) was published in his Polyglot by Morinus, 1632.

SAMOS, an island on the W. coast of Asia Minor. Colonised by Ionians about 1043 B.C. The city was founded about 986. Polycrates, ruler of Samos (532-22 B.C.), was one of the most able, fortunate, and treacherous of the Greek tyrants, and possessed a powerful fleet. He patronised Pythagoras (born here) and Anacreon. Samos was taken by the Athenians, 440; and, with Greece, became subject to Rome, 146. It was taken by the Venetians, A.D. 1125, who here made velvet (*samet*), and became subject to the Turks, about 1459. Population, 1891, 44,953.

SANCTION, see *Pragmatic*.

SANCTUARIES, see *Asylums*. Privileged places for the safety of offenders are said to have been granted by king Lucius to churches and their precincts. St. John's of Beverley was thus privileged in the time of the Saxons. St. Burian's, in Cornwall, was privileged by Athelstan, 935; Westminster, by Edward the Confessor; St. Martin's-le-Grand, 1529. Being much abused, the privilege of sanctuary was limited by the pope in 1503 (at the request of Henry VII.), and much reduced in 1540. In London, persons were secure from arrest in certain localities: these were the Minories, Salisbury-court, Whitefriars, Fulwood's-rents, Mitre-court, Baldwin's-gardens, the Savoy, Clink, Deadman's-place, Montague-close, and the Mint. This security was abolished 1697, but lasted in some degree till the reign of George II. (1727).

SAND-BLAST. Gen. B. C. Tilghman, of Philadelphia, has invented a method of cutting stone or hard metal by a jet of quartz sand impelled by compressed air or steam. The invention was submitted to the Franklin Institute, Philadelphia, 15 Feb. 1871. It may be employed in the arts, for etching, &c.; for this purpose a company was at work, 1874.

SANITATION, the preservation of health. Strict cleanliness is enjoined in the law of Moses, 1490 B.C. Great attention has been paid to the public health in France since 1802. Tardieu published his "Dictionnaire de Hygiène," 1852-54. Sanitary commissions were appointed in 1838 and 1844. To Dr. Southwood Smith is mainly attributable the honour of commencing the agitation on the subject of public health in England about 1832; his "Philosophy of Health" having excited much attention. Since 1838 he has published numerous sanitary reports, having been much employed by the government. Professors of hygiene are now appointed. SANITAS (health), a new antiseptic and disinfectant, invented by Mr. C. T. Kingzett, about 1875.

Having discovered that the salubrity of the air surrounding certain trees, such as the *Eucalyptus globulus* and pines, is due to their volatile oils producing peroxide of hydrogen and camphoric acid, he devised a method for procuring these re-agents by the decomposition of common turpentine, and in 1877 they were manufactured and sold as "Sanitas."

SANSKRIT, the language of the Brahmans of India, spoken at the time of Solomon, has been much studied of late years. Sir Wm. Jones, who published a translation of the poem Sakuntalá, in 1783, discovered that a complete literature had been preserved in India, comprising sacred books (the Vedas), history and philosophy, lyric and dramatic poetry. Texts and translations of many works have been published by the aid of the East India Company, the Oriental Translation Fund, and private liberality. The professorship of Sanskrit at Oxford was founded by colonel Boden. The first professor, H. H. Wilson, appointed in 1832, translated part of the Rig-veda Sanhitá, the sacred hymns of the Brahmins, and several poems, &c. Professor Monier Williams (elected 1860) published an English and Sanskrit dictionary, 1851. Professor Max Müller published his history of Sanskrit Literature in 1859, and has edited the original text of the Vedas. Philologists have discovered an intimate connection between the Sanskrit, Persian, Greek, Latin, Teutonic, Slavonian, Celtic, and Scandinavian languages. This was the greatest check the British suffered in the war.

SARAWAK, see *Borneo.*

SARDINIA, an island in the Mediterranean, successively possessed by the Phœnicians, Greeks, Carthaginians (about 500 B.C.), Romans (238), Vandals (A.D. 456), Saracens (720-40), Genoese (1022), Pisans (1165), Aragonese (1352), and Spaniards. From settlers belonging to these various nations the present inhabitants derive their origin. Victor Amadeus, duke of Savoy, acquired Sardinia in 1720, with the title of king; see *Savoy.* Population of the Sardinian dominions in 1858, 5,194,807; of Sardinia alone, 1887, 723,833. SARMATIA, the ancient name for the country in Asia and Europe between the Caspian Sea and the Vistula, including Russia and Poland. The Sarmatæ or Sauromatæ troubled the early Roman empire by incursions. After subduing the Scythians they were subjugated by the Goths, in the 3rd and 4th centuries. They joined the Huns and other barbarians in invading Western Europe in the 5th century.

SARNO (S. Italy). Near this river, Teias, king of the Goths, was defeated and slain by Justinian's general Narses, March, 553.

SARUM, OLD (Wiltshire), an ancient British town, the origin of Salisbury (*which see*). Although completely decayed, it returned two members to parliament till 1832.

SASSANIDES, descendants of Artaxerxes or Ardishir, whose father, Babek, was the son of Sassan. He revolted against Artabanus, the king of Parthia; defeated him on the plain of Hormuz, 226; and re-established the Persian monarchy. This dynasty was expelled by the Mahometans, 652; see *Persia*.

SATIRE. About a century after the introduction of comedy, satire made its appearance at Rome in the writings of Lucilius, called the inventor of it, 116 B.C. *Livy*. The Satires of Horace (35 B.C.), Juvenal (about A.D. 100), and Persius (about A.D. 60), are the most celebrated in ancient times, and those of Churchill (1761) and Pope (1729), in modern times. Butler's "Hudibras," satirizing the presbyterians, first appeared in 1663. *Satire Menippée*, a celebrated satirical pamphlet, partly in verse and partly in prose, attacking the policy of the court of Spain and the league, written in the style of the biting satires of the cynic philosopher Menippus. The first part, "Catholicon d'Espagne," by Leroy, appeared in 1593; the second, "Abrégé des Etats de la Ligue," by Gillot, Pithou, Rapin, and Passerat, appeared in 1594. *Bouillet*.

SATRAPIES, divisions of the Persian empire, formed by Darius Hystaspes about 516 B.C.

SATTARA (W. India) was long a flourishing state, founded by Sevajee about 1646; subjugated by the Mahrattas about 1749; conquered by the British, 1818; ruled by a rajah under the protection of the company. The last rajah died without issue in 1848; when the country was annexed.

SATURDAY (the last, or seventh day of the week; the Jewish Sabbath; see *Sabbath*). It was so called from an idol worshipped on this day by the Saxons, and according to Verstegan, was named by them Saterne's day. *Pardon*. It is more probably from Saturn, *dies Saturni*. *Saturday Review*, an independent literary weekly journal, was first published, 3 Nov. 1855. See *Hospital* and *Lifeboat*.

SATURN, the planet, ascertained to be about 900 millions of miles distant from the sun, and its diameter to be about 77,230 miles. One of the eight satellites was discovered by Huyghens (25 March, 1655); four by Cassini (1672-84); two by sir William Herschel (1789), and one by Bond and Lassell (1848). The ring was observed by Galileo, about 1610; its annular form determined by Huyghens, about 1655. The notion that the discovery

of the two-fold character of the ring was by the Messrs. Ball, 1665, is exploded. Cassini discovered that the ring consisted in fact of two concentric rings, the inner brighter than the outer, in 1675. An inner ring was detected in 1850 by Dawes in England (29 Nov.), and by Bond in America. The ring, or series of concentric rings, is now considered to be composed of a multitude of small satellites.

SATURNALIA, festivals in honour of Saturn, father of the gods, were instituted long before the foundation of Rome, in commemoration of the freedom and equality which prevailed on the earth in his golden reign. Some, however, suppose that the Saturnalia were first observed at Rome in the reign of Tullus Hostilius (673-640 B.C.), after a victory obtained over the Sabines: whilst others suppose that Janus first instituted them in gratitude to Saturn, from whom he had learned agriculture. Others assert that they were first celebrated after a victory obtained over the Latins by the dictator Posthumius, when he dedicated a temple to Saturn, 497 B.C. During these festivals no business was allowed, amusements were encouraged, and distinctions ceased. *Lenglet.*

SAVAGE CLUB, instituted by various literary men, in 1857, facetiously terming themselves "savages," on account of their freedom from conventionalism. On some occasions they gave a war-whoop. *Sala.* Mr. W. E. Gladstone was present at the 22nd anniversary, 14 June, 1879, and the prince of Wales has been a visitor (1882).

SAVANDROOG or SEVERNDROOG (Mysore, S. India), a strong fortress, was captured by the British, 2 April, 1755, and 21 Dec. 1791.

SAVANNAH, a city and port of Georgia on the river Savannah, U.S.A., founded in 1733, and incorporated, 1789; it was taken by the British in the American war in 1778, and by gen. Sherman, the northern general, 21 Dec. 1864. Pop. 1880, 30,709; 1890, 43,189.

SAVINGS' BANKS. The first of these was instituted at Berne, in Switzerland, in 1787, by the name of *caisse de domestiques*, being intended for servants only; another was set up in Basel, in 1792, open to all depositors. The rev. Joseph Smith, of Wendover, began a Benevolent Institution in 1799; and in 1803-4, a "charitable bank" was instituted at Tottenham by Miss Priscilla Wakefield. The rev. Henry Duncan established a parish bank at Ruthwell in 1810. One was opened in Edinburgh in 1814. The benefit clubs, among artisans, having accumulated stocks of money for their progressive purposes, a plan was adopted to identify these funds with the public debt of the country, and an extra rate of interest was held out as an inducement; hence were formed savings' banks to receive small sums, returnable with interest on demand.

Rt. hon. Geo. Rose developed the system, and brought it under parliamentary control, 1816.

In 1840 there were 550 banks; 766,354 depositors; amount, 22,060,904*l.*

Acts to consolidate and amend previous laws relating to savings' banks were passed in 1828 and 1847; extended to Scotland in 1835; again consolidated and amended in 1863, 1880 and 1887.

On 20 Nov. 1851, the number of savings' banks in Great Britain and Ireland was 574, besides above 20,000 friendly societies and charitable institutions. The depositors (in the banks) were 1,092,581, while the societies embraced a vast but unknown number of persons: the amount of deposits was 32,893,511*l.*

SAVONA (a manufacturing town, N. Italy, long held by the Genoese) was captured by the king of Sardinia in 1746; by the French in 1809, and annexed; restored to Sardinia at the peace. Pope Pius VII. was kept here by Napoleon I., 1809-12. Soap is said to have been invented here, and hence its French name *savon.*

SAVOY, the ancient *Sapaudia* or *Sabaudia*, formerly a province in N. Italy, east of Piedmont. It became a Roman province about 118 B.C. The Alemanni seized it in A.D. 395, and the Franks in 490. It shared the revolutions of Switzerland till about 1048, when Conrad, emperor of Germany, gave it to Humbert, with the title of count. Count Thomas acquired Piedmont in the 13th century. Amadeus, count of Savoy, having entered his

dominions, solicited Sigismund to erect them into a duchy, which he did at Cambray, 19 Feb. 1416. Victor-Amadeus, duke of Savoy, obtained the kingdom of Sicily from Spain, by a treaty, in 1713, but afterwards exchanged it with the emperor for the island of Sardinia, with the title of king, 1720. The French subdued Savoy in 1792, and made it a department of France, under the name of Mont Blanc, in 1800. It was restored to the king of Sardinia in 1814; but with Nice annexed to France in 1860, in accordance with a vote by universal suffrage, 23 April, 1860. Savoy was visited by the emperor and empress of the French in August, 1860. The annexation was censured in England.

SAVOY PALACE (London), was built by Peter of Savoy, uncle of Eleanor, queen of Henry III., in 1245, on land granted to him. He gave it to the fraternity of Mountjoy (Monte Jovis), from whom it was purchased by queen Eleanor for her son Edmund. Here resided John, king of France, when a prisoner, 1357 *et seq.* The Savoy was burnt by Wat Tyler and his followers, 1381. It was restored as an hospital of St. John the Baptist by Henry VII. about 1505. The fruitless CONFERENCE of bishops and eminent puritans for the revision of the liturgy was held at the Savoy, April-July, 1661. The hospital was dissolved in 1702. The buildings (used as a military prison) were removed to make way for Waterloo-bridge and its approaches, 1817-19. The privilege of sanctuary which the ancient *Chapel* formerly possessed and which was much abused, was abolished by parliament in 1697. The *Chapel* after several restorations, was destroyed by fire, 7 July, 1864, and was rebuilt at the queen's expense, and re-opened 26 Nov. 1865. The rev. Henry White, 30 years chaplain, died 7 Oct. 1890.

SAW. Invented by Dædalus. *Pliny.* Invented by Talus. *Apollodorus.* Talus, it is said, having found the jaw-bone of a snake, employed it to cut through a piece of wood, and then formed an instrument of iron like it. Saw-mills were erected in Madeira in 1420; at Breslau in 1427. Norway had the first saw-mill in 1530. The bishop of Ely, ambassador from Mary of England to the court of Rome, describes a saw-mill there, 1555. The attempts to introduce saw-mills in England were violently opposed, and one erected by a Dutchman in 1663 was forced to be abandoned. Saw-mills were erected near London about 1770. The excellent saw-machinery in Woolwich dockyard is based upon the invention of the elder Brunel, 1806-13. The circular saw was introduced into England about 1790. The *saw-gin* for separating cotton wool from the pod, invented by Eli Whitney, an American, in 1793, led to the immense growth of cotton in the southern states of the Union. Powis and James's band-saw was patented in 1858.

SCOURING OF THE WHITE HORSE, see *Ashdown*.

SCREW, was known to the Greeks. The pumping-screw of Archimedes, or screw-cylinder for raising water, invented about 236 B.C., is still in use. It is stated that with the assistance of the screw, one man can press down or raise up as much as 150 men can do without it.—The SCREW-PROPELLER consists of two or more twisted blades, like the vanes of a windmill, set on an axis, running parallel with the keel of a vessel, and revolving beneath the water at the stern. It is driven by a steam-engine. The principle was shown by Hooke in 1681, and since by Du Quet, Bernouilli, and others. Patents for propellers were taken out by Joseph Bramah in 1784; by Wm. Lyttelton in 1794; and by Edward Shorter in 1799. But these led to no useful result. In 1836 patents were obtained by Francis Pettit Smith (knighted July, 1871; died, 12 Feb. 1874) and captain John Ericsson (died, aged 86, March, 1889); and to them the successful application of the screw-propeller must be attributed. The first vessels with the screw were the *Archimedes*, built on the Thames in 1838 by H. Wimshurst, and the *Rattler*, built in the United States (1844), and tried in England in 1845. Double screw-propellers are now employed. A new form of screw-propeller invented by col. W. H. Mallory, of U. S. A. army, was tried on the Thames and reported successful, Aug. 1878.

SCRIBLERUS CLUB, a literary club, founded by Swift in 1714, included amongst its members, Bolingbroke, Pope, Gay, and Arbuthnot.

SCRIPTURE KNOWLEDGE INSTITUTION, Bristol, was founded by George Müller, a Prussian (born 1805, died 10 March, 1898). He came to Bristol as a minister of the "Brethren" in 1832, and on 5 March, 1834, founded this institution, the objects of which are: 1. Assistance of schools giving instruction on scriptural principles; 2. Circulation of the scriptures; 3. Assistance to missions; 4. Circulation of tracts; 5. Provision for destitute orphans, see *Orphan-houses*. Without application, Mr. Müller, since he began, up to 26 May, 1895, had received by voluntary contribution, 1,373,348*l*. 6*s*. 2½*d*.

SCROFULA, see *King's-evil*.

SCRUTIN (French for ballot). In *scrutin de liste* the voter writes on his paper as many names as there are persons to be elected, for instance for the whole department. In *scrutin d'arrondissement*, the members are elected separately. The adoption of one of these modes was much discussed in France in 1875. The conservatives prefer the latter, the radicals the former. See *France*, Nov. 1875. The *scrutin de liste* was adopted in the elections of 1848, 1849, 1871, and 1875.

M. Bardoux's bill for adopting the *scrutin de liste* (warmly advocated by M. Gambetta), was passed by the chamber of deputies (243-235), 18 May, 1881; rejected by the senate (148-114), 9 June, 1881; again rejected, Jan. 1882.
M. Welbeck Rousseau's bill for the *scrutin de liste* passed by the deputies (412–99), 24 March, finally passed, 8 June, 1885.
The bill for the restoration of the *scrutin d'arrondissement* passed by the chamber 11 Feb. and senate 13 Feb. 1889.
The *scrutin de liste* was adopted by the Italian chamber, 14 Feb. 1882.

SCULLABOGUE, see *Massacres*, 1798.

SCULPTURE is said to have begun with the Egyptians. Bezaleel and Aholiab built the taber-

nacle in the wilderness, and made all the vessels and ornaments, 1491 B.C., and their skill is recorded as the gift of God. *Exod.* xxxi. 3. Dipœnus and Scyllis, statuaries at Crete, established a school at Sicyon. Pliny speaks of them as being the first who sculptured marble and polished it; all statues before their time being of wood, 568 B.C. Alexander gave Lysippus the sole right of making his statues, 326 B.C. He left no less than 600 pieces, some of which were so highly valued in the age of Augustus, that they sold for their weight in gold. Sculpture did not flourish among the Romans, and in the middle ages with some fine exceptions, was generally degraded. With the revival of painting, it revived also; and Donato di Bardi, born at Florence, A.D. 1383, was the earliest professor among the moderns. An institute of sculptors was established in 1861. See *Royal Academy* and *Statues*.

SCUTAGE or ESCUAGE. The service of the shield (scutum) is either uncertain or certain. Escuage uncertain is where the tenant by his tenure is bound to follow his lord; and is called Castleward, where the tenant is bound to defend a castle. Escuage certain is where the tenant is set at a certain sum of money to be paid in lieu of such uncertain services. The first tax levied in England to pay an army, 5 Hen. II. 1159. *Cowel.*

SCUTARI, Asiatic Turkey, opposite Constantinople, of which it is a suburb. It was anciently called *Chrysopolis*, golden city, in consequence, it is said, of the Persians having established a treasury here when they attempted the conquest of Greece. Near here Constantine finally defeated Licinius, 323. The hospital was occupied by the sick and wounded of the Anglo-French army, in 1854-5, whose sufferings were much alleviated by the kind exertions of Miss Florence Nightingale and a band of nurses under her, aided by a large fund of money (15,000*l.*) subscribed by the public and placed in the care of the proprietors of the *Times* newspaper; see *Times*. Explosion of powder magazine by lightning, about 150 killed, 8 June, 1883.

SCYTHIA, situate in the most northern parts of Europe and Asia. The boundaries were unknown to the ancients. The Scythians made several irruptions upon the more southern provinces of Asia, especially 624 B.C., when they remained in possession of Asia Minor for twenty-eight years, and at different periods extended their conquests in Europe, penetrating as far as Egypt; see *Tartary*.

SEA. Lieut. Maury first published his "Physical Geography of the Sea" in 1854, and other important works since; he died Feb. 1873; see *Deep Sea*.

SEA BIRDS' PRESERVATION ACT, passed 24 June, 1869.

SEA FIGHTS see *Naval Battles*.

SEA FISHERIES, see *Fisheries*, and *Behring Straits*.

SEAL FISHERY ACT, passed 14 June, 1875; another act, 29 June, 1893, see *Behring Straits*. Seal fisheries (N. Pacific) act, relating to Russia, passed, 27 June, 1895.

SEALS or SIGNETS. Engraved gems were used as such by the Egyptians, Jews, Assyrians, and Greeks; see *Exod.* xxviii. 14. Ahab's seal was used by Jezebel, 899 B.C. (1 *Kings* xxi. 8.) The Romans in the time of the Tarquins (about 600 B.C.) had gemmed rings. They sealed rooms, granaries, bags of money, &c. The German emperor, Frederick I. (A.D. 1152) had seals of gold, silver, and tin. Impressions of the seals of Saxon kings are extant; and the English great seal is attributed to Edward the Confessor (1041-66). "A seal with armorial bearings before the 11th century, is certainly false." *Fosbroke*. The most ancient English seal with arms on it is said to be that of Richard I. or John. White and coloured waxes were used. Our present sealing-wax, containing shellac, did not come into general use in Germany and England until about 1556. Red wafers for seals came into use about 1624; but were not used for public seals till the 18th century. A seal acquired by the British Museum made of black hematite, thought to be Hittite, found at Yuzgat in Asia Minor, announced Nov. 1886. *Seal Society*, for publication of fac-similes of ancient seals, was established in 1883.—For SEALED LETTERS, see *Great Seal* and *Lettres de Cachet*.

SEAMEN. In consequence of the great loss of life by wrecks of merchant vessels, attributed to bad ships and overloading, a commission of inquiry was agreed to by parliament on the motion of Mr. S. Plimsoll (who published "Our Seamen: an Appeal"), 4 March, 1873. The duke of Edinburgh was on the commission; the duke of Somerset, chairman. Mr. Plimsoll has been censured for exaggeration.

The report issued in September tended to justify the public apprehensions, but suggested no remedy. The report presented to parliament, 2 July, 1874, condemned the present insurance system, and recommended increased responsibility of owners and others, and strengthening the powers of the Board of Trade for investigation.

The Merchant Shipping Survey Bill was rejected (173—170) . . . . . 24 June, 1874

After much excitement, an Act was passed to give further powers to the Board of Trade to stop unseaworthy ships . . . . . 13 Aug. 1875

Another Merchant Shipping Act (*which see*) passed 15 Aug. 1876

Strong circular issued by the Board of Trade (Mr. Chamberlain); deaths of the employed in ships asserted to be 1 in 60; in coal mines 1 in 315; present system stated to be ineffectual . Jan. 1884

SEAS, SOVEREIGNTY OF THE. The claim of England to rule the British seas is of very ancient date. Arthur is said to have assumed it, and Alfred afterwards supported this claim. It was maintained by Selden, and measures were taken by government in consequence, 8 Chas. I. 1633. The Dutch, after the death of Charles I., made some attempts to obtain it, but were roughly treated by Blake and other admirals. Russia and other powers of the north armed to avoid search, 1780; again, 1800; see *Armed Neutrality* and *Flag*. The international rule of the road at sea was settled in 1862; (new rules were issued in 1879 and 19 Aug. 1884), yet near Great Britain alone there have been 13,000 collisions in six years. Mr. Wm. Stirling Lacon proposed to reduce the rules from 749 words to 144, for simplicity and security. His form had been nine times before parliament, 1873. Revised rules issued by the admiralty in a "Fleet Circular," Nov. 1885.

The British Board of Trade appointed a committee, consisting of admirals N. Bowden Smith, sir Robert Molyneux, sir George S. Nares, and others, to consider measures for the establishment of a "new rule of the road at sea"; first meeting . . . . . 1 Aug. 1890

The committee adopted the regulations recommended by the Washington conference in 1889 (see *Navigation Laws*), in spite of much opposition from the Chamber of Shipping of the United Kingdom, the General Shipowners' Society of London, the committee of Lloyd's, and other kindred bodies; reported Dec. 1894.

Committee appointed by the board of trade: sir Francis H. Jeune (chairman), and others, March, 1895; report issued, the new rules supported but simplification recommended, April, 1896; another committee appointed respecting collisions at sea, May, 1897; final report concluded 13 May; rules to be enforced . . . . . 1 July, 1898

Blue-book issued . . . . . 29 June, „

SEA SERPENT, GREAT, the name given to an animal popularly believed to exist, especially in deep tropical seas, but much controverted by zoologists, sir Richard Owen and others.

Capt. M'Quhae described the appearance of such an animal in the South Atlantic ocean in 1848. Other descriptions have been since published, and many explanations have been suggested. "The Great Sea Serpent," by Mr. A. C. Oudemans, published in 1893, contains reports of 187 appearances, with 82 illustrations.

SEBASTIAN, ST. (N. Spain), was taken by the French, under the duke of Berwick, in 1719. It was besieged by the British and allied army under Wellington. After a most heavy bombardment, by which the whole town was laid nearly in ruins, it was stormed by general Graham (afterwards lord Lynedoch), and taken 31 Aug. 1813.—On 5 May, 1836, the fortified works, through the centre of which ran the high road to Hernani, were carried by the English auxiliary legion under general Evans, after very hard fighting. The British naval squadron, off St. Sebastian, under lord John Hay, lent very opportune aid to the victors in this contest.—A vigorous assault was made on the lines of general De Lacy Evans, at St. Sebastian, by the Carlists, 1 Oct. 1836. Both parties fought with bravery. The Carlists were repulsed, after suffering severely. The loss of the Anglo-Spanish force was 376 men and 37 officers, killed and wounded. General De Lacy Evans was slightly wounded. See under *Leagues*. The queen regent of Spain meets queen Victoria here, 27 March, 1889. Population, 1887, 29,047.

SEBASTOPOL or SEVASTOPOL, a town and once a naval arsenal, at S.W. point of the Crimea, formerly the little village of Aktiar. The buildings were commenced in 1784, by Catherine II. after the conquest of the country. The town is built in the shape of an amphitheatre on the rise of a large hill flattened on its summit, according to a plan laid down before 1794, which has been since adhered to. The fortifications and harbour were constructed by an English engineer, colonel Upton, and his sons, since 1830. The population in 1834 was 15,000. This place underwent eleven months' siege, by the English and French in 1854 and 1855. Immediately after the battle of the Alma, 20 Sept. 1854, the allied army marched to Sebastopol, and took up its position on the plateau between it and Balaklava, and the grand attack and bombardment commenced 17 Oct. 1854, without success.* After many sanguinary encounters by day and night, and repeated bombardments, a grand assault was made on 8 Sept. 1855, upon the Malakhoff tower and the Redans, the most important fortifications to the south of the town. The French succeeded in capturing and retaining the Malakhoff. The attacks of the English on the great Redan and of the French upon the little Redan were successful, but the assailants were compelled to retire after a desperate struggle with great loss of life. The French lost 1646 killed, of whom 5 were generals, 24 superior and 116 inferior officers, 4500 wounded, and 1400 missing. The English lost 385 killed (29 being commissioned and 42 non-commissioned officers), 1886 wounded, and 176 missing.

* In consequence of the sufferings and disasters of the army in the winter of 1854-5, the Sebastopol Inquiry Committee was appointed, and the Aberdeen administration resigned, Feb. 1855. The committee sat from 1 March to 15 May, lord Aberdeen being the last person examined. Its report was presented 18 June. Mr. Roebuck, the chairman, moved on 17 July that the house should pass a vote of severe reprehension on every member of the Aberdeen administration. On 19 July his motion was lost by a majority of 107 against it. In 1855 the government sent sir John M'Neill and col. Tulloch to inquire into the state of the armies in the Crimea. Their report was presented to parliament in Feb. 1856. A commission was appointed to consider the statements in the report (which were very unfavourable to many officers), but the substance of the report was unshaken.

In the night the Russians abandoned the southern and principal part of the town and fortifications, after destroying as much as possible, and crossed to the northern forts. They also sank or burnt the remainder of their fleet. The allies found a very great amount of stores when they entered the place, 9 Sept. The works were utterly destroyed in April, 1856, and the town was restored to the Russians in July; gen. Todleben, the able defender, died 1 July, 1884, and was buried here; his monument uncovered 28 June, 1890. See *Russo-Turkish War*. Population of Sebastopol, 1885, 33,803. Made a naval port, Sept. 1895; new dock, opened, 18 May, 1898.

SECRET SOCIETIES, *Assassins*, *Fenians*, *Ribbonism*, *Vehmic Tribunal*, *Rosicrucians*, *Illuminati*, *Carbonari*, *Mary-Anne*, *Nihilists*.

SECRETARIES OF STATE. The earliest authentic record of a secretary of state is in the reign of Henry III., when John Maunsell is described as "*Secretarius Noster*," 1253. *Rymer*. Towards the close of Henry VIII.'s reign, two secretaries were appointed; and upon the union with Scotland, Anne added a third as secretary for Scotch affairs; this appointment was afterwards laid aside; but in the reign of George III. the number was again increased to three, one for the American department. In 1782 this last was abolished by act of Parliament; and the secretaries were appointed for home, foreign, and colonial affairs. When there were but two secretaries, one held the *portefeuille* of the Northern department, comprising the Low Countries, Germany, Denmark, Sweden, Poland, Russia, &c.; the other, of the Southern department, including France, Switzerland, Italy, Spain, Portugal, and Turkey; the affairs of Ireland belonging to the elder secretary; both secretaries then equally directed the home affairs. *Beatson*. There are now six secretaries—home, foreign, colonial, war, (in 1858) India, and (in 1885) Scotland, all in the cabinet Secretary of State for Scotland act passed 14 Aug. 1885, amended 1887, explained 1889. See *Administrations*, and separate articles.

The Institute of Secretaries was started at a meeting in London, 4 July, 1890, to collect information respecting the position, duties, and responsibilities of secretaries to be applied for their benefit. First dinner, 24 June, 1892. Annual meetings.

SECTS, RELIGIOUS, see under *Worship*, and their respective titles.

SECULAR GAMES (*Ludi Sæculares*), very ancient Roman games, celebrated on important occasions. Horace wrote his "Carmen Sæculare" for their celebration in the reign of the emperor Augustus (17). They took place again in the reign of Claudius (47), of Domitian (88), and for the last time, of Philip (248), believed to be 2000 years after the foundation of the city.

SECULARISM, a name given to the principles advocated by G. J. and Austin Holyoake, about 1846, and since by Mr. Bradlaugh.

Its central idea is free, not lawless thought, and it considers scepticism to be scrutiny. It advocates liberty of action without injury to others. It is not against Christianity, but independent of it. Its standard is utilitarian; it is the religion of the present life only; teaching men to seek morality in nature, and happiness in duty. Mr. Austin Holyoake and other secularists repudiated atheism; Mr. Bradlaugh and others profess it.

SECURITY FROM VIOLENCE ACT, passed in 1863, appointed whipping as part of the punishment for attempts at garotting.

SEDAN, an ancient fortified city in the valley of the Meuse, N.E. of France, the seat of a principality long held by the dukes of Bouillon. On 6 July, 1641, a victory was gained at La Marfée, near Sedan, by the count of Soissons and the troops of Bouillon and other French princes, over the royal army supporting Richelieu; but the count was slain on 23 June, 1642. The duke was arrested in the midst of his army, and was made to cede Sedan to the crown. The protestant university was abolished after the revocation of the edict of Nantes, 22 Oct. 1685. Around this place a series of desperate conflicts on 29, 30, and 31 Aug. between the French army of the north, under marshal MacMahon (about 150,000 men), and the greater part of the three German armies under the king and crown-prince of Prussia and the crown-prince of Saxony (about 250,000 men) was brought to a close on 1 Sept. 1870.

The battle began with attacks on the French right and left about 5 a.m., and was very severe at 2 p.m. At 4 p.m. the Germans remained masters of the field, and the crown-prince of Prussia announced a complete victory, the chief part of the French army retreating into Sedan.

The emperor Napoleon was present during the battle, and, it is said, stood at Iges, near Sedan, exposed for four hours to the German grenades. The impossibility of further resistance was then evident. The Germans had contracted their circle close round Sedan; their formidable artillery held all the heights, from which they could at pleasure wholly destroy the town and the army, and only 2000 men were in a condition to respond to their commander's call, and to make a supreme effort to break through the enemy with the emperor and escape to Montmédy.

At first general de Wimpffen (called to the command when MacMahon was wounded) indignantly rejected the terms offered by the victor, and the emperor had a fruitless interview with count Bismarck to endeavour to mitigate them.

On 2 Sept. the emperor wrote in autograph to the king of Prussia, "Mon frère, n'ayant pu mourir à la tête de mes troupes, je dépose mon épée au pied de votre majesté. NAPOLEON." A capitulation of Sedan and the whole army therein was signed by generals Von Moltke and De Wimpffen at the château of Bellevue, near Frenois, at 11.30 a.m., and at 2 p.m. an interview took place between the king and the emperor, who was downcast but dignified.

The conflict was principally carried on by the artillery, in which (according to the emperor) the Germans had the advantage, not only in number (600 to 500), but also in weight, range, and precision. The carnage was awful, and the field the next day was a mass of shattered bones, torn flesh, and coloured rags.

About 25,000 French prisoners were taken in the battle, and 83,000 surrendered the next day, together with 70 mitrailleuses, 400 field-pieces, and 150 fortress guns. About 14,000 French wounded were found lying in the neighbourhood, and about 3000 escaped into Belgium and laid down their arms. The great army of the north had ceased to exist. Among the killed was lieut.-col. Pemberton, a correspondent of the *Times*, who had approached too near the conflict.

The French emperor and his suite arrived at Wilhelmshöhe, a castle near Cassel appointed for his residence, (formerly inhabited by his uncle Jerome, when king of Westphalia), in the evening of 5 Sept.

On 1 Sept. the village of Bazeilles was stormed by the Bavarians and burnt, it was said, because the inhabitants fired on the ambulances; many women and children perished. The French denied the provocation.

The place had been previously twice bombarded and stormed by the maddened combatants.
In a letter dated 12 May, 1872, the emperor Napoleon took upon himself the whole responsibility of the surrender of Sedan.

SEDAN CHAIRS (so called from Sedan), were first seen in England in 1581. One used in the reign of James I., by the duke of Buckingham, caused great indignation, and the people exclaimed that he was employing his fellow-creatures to do the service of beasts. Sedan chairs came into London in 1634, when sir Francis Duncomb obtained the sole privilege to use, let, and hire a number of such covered chairs for fourteen years. They came into very general use in 1649.

SEDANGS, a tribe dwelling on the borders of Annam. M. de Mayrena, an ex-officer of the French navy, having made himself their king, came to Paris. He was set aside, and the Sedangs were brought under French protection by the French resident-general in Indo-China; reported Oct. 1889.

SEDGMOOR (Somersetshire), where the duke of Monmouth (natural son of Charles II. by Lucy Walters), who had risen in rebellion on the accession of James II., was completely defeated by the royal army, 6 July, 1685. The duke was made a prisoner in the disguise of a peasant, at the bottom of a ditch, overcome with hunger and fatigue. He was tried and beheaded on 15 July following.

SEDITION. Sedition acts were passed in the reign of George III. The proclamation against seditious writings was published May, 1792. The celebrated Sedition bill passed Dec. 1795. Seditious societies were suppressed by act, June, 1797. The Seditious Meetings and Assemblies' bill passed 31 March, 1817. In Ireland, during the Roman Catholic and Repeal agitation, acts or proclamations against sedition and seditious meetings were published from time to time until 1848.

SENATE (*Senatus*). In the ancient republics the government was divided between the *senatus* (from *senis*, old; in Greek, *gerousia*, from *gerōn*, old), an assembly of elders, and the popular assembly (*comitia*, Latin; *ecclesia*, Greek), the king being merely the executive. The Roman senate, said to have originally been composed of 100 members, was raised to 300 by Tarquinius Priscus; to about 600 by Sylla, about 81 B.C.; and to 900 by Julius Cæsar. It was reformed and reduced to 600 by Augustus; and gradually lost its power and dignity under the emperors. The mere form existed in the reign of Justinian. A second senate, formed at Constantinople by Constantine, retained its office till the 9th century. S.P.Q.R. on the Roman standard stood for "Senatus Populusque Romanus," "the Roman senate and people." A *senatus consultum* was a law enacted by the senate.

The French senate was created by the constitution of the year 8, promulgated 24 Dec. 1799, to watch over the administration of the laws. The number of senators was raised gradually from 60 to 137. The senate was replaced by the chamber of peers in 1814; re-established by Napoleon III. 14 Jan. 1852; and abolished, 5 Sept. 1870. Its re-establishment was proposed in 1873.

This continued to be the statute-law till 16th Charles I. 1641, when an act was passed for holding parliaments once in three years at least; repealed in 1664. The Triennial act was re-enacted in 1694. Triennial parliaments thence continued till the 2 Geo. I. 1716, when, in consequence of the allegation that "a popish faction were designing to renew the rebellion in this kingdom, and the report of an invasion from abroad," it was enacted that "the then parliament should continue for seven years." This *Septennial act*, entitled "an act for enlarging the continuance of parliaments" (1715 in the statutes, 4to, given as 1 Geo. I. stat. 2, c. 38), was passed 7 May, 1716; see *Parliaments*. In 59, he was in great danger from a tumult created by Demetrius; to the elders of this church he delivered his warning address, 60 (Acts xix. xx.). SHAKERS, an English sect, now chiefly found in America, arose in the time of Charles I., and derived its name from their voluntary convulsion. It existed for a short time only, but was revived by James Wardlaw in 1747, and still more by Ann Lee (or Standless), expelled quakers, about 1757. The sect emigrated to America, May, 1772, and settled near Albany, New York, 1774. They denounce marriage as sinful, regard celibacy as holy, oppose war, disown baptism and the Lord's Supper, and use dancing as part of their worship. *Marsden.* One of their elders, Fred. W. Evans, lectured in London, Aug. 1871.

Above a hundred English persons, incorrectly termed shakers, settled in the New Forest, near Lymington, Hampshire, on property obtained for them by a Miss Wood in 1872; not paying the interest of a mortgage they were ejected in severe weather, and suffered much; end of Dec. 1874. They are called Girlingites, from Mrs. Girling, a leader among them, who died 18 Sept. 1886. The community then gradually dispersed.

Goods seized for debt, about 27 July; expelled, 22 Aug.; permitted to remain in the neighbourhood, Oct. 1878.

SHAKSPEARE'S PLAYS. William Shakspeare was born at Stratford-upon-Avon, Warwickshire, (23) April, 1564, and died 23 April, 1616. [An act to incorporate the Trustees and Guardians of Shakspeare's birthplace was passed 26 March, 1891.] The first collected edition of his works is dated 1623 [a facsimile of this edition was published, 1862-5]; the second, 1632;* the third, 1664; the fourth, 1685; all in folio. Critical editions of the text, edited by Alexander Dyce, were published in 1857 and 1864-6; Boydell's edition, with numerous plates, was published in nine vols., folio, in 1802. Ayscough's Index to Shakspeare was published in 1790; Twiss's Index, in 1805, and Mrs. Cowden Clarke's Concordance, 1847, she died, aged 88, 12 Jan. 1898; "Key to Shakspeare," 1879; Shakspeare-Lexicon, by Alexander Schmidt, 1874-5.

Shakspeare's first plays were probably produced about 1590, and soon after represented, himself frequently taking a part at the "Theatre," or the "Curtain," near Shoreditch, E. London, and after 1594, at the new "Globe" theatre, Bankside, Southwark, of which Shakspeare himself was part proprietor. It was of a horse-shoe form, partly covered with thatch. After it was licensed, the thatch took fire, through the negligent discharge of a piece of ordnance, and the whole building was consumed, 29 June, 1613. The house was crowded to excess, to witness the play of *Henry VIII.*, but the audience escaped unhurt.

Shakspeare's Jubilee, projected by David Garrick, was celebrated at Stratford-upon-Avon, 6-8 Sept. 1769. A similar festival was kept 23 April, 1836. The *tercentenary* of Shakspeare's birth was celebrated, with many festivities, at Stratford-upon-Avon, 23-29 April, 1864.

* In 1849, Mr. J. P. Collier, editor of an edition of Shakspeare, purchased a copy of the second folio, on which was written in pencil a number of corrections, supposed to have been made soon after publication. At first he thought little of these marks; but in 1853 he was induced to publish "Notes and Emendations" derived from this volume. Much controversy ensued as to the authenticity of these corrections; and in 1859 it was generally agreed that they were of modern date, and so of little value. Mr. Collier died, aged 94, 17 Sept. 1883. New Variorum edition by H. Howard Furness, vol. ii., 1898.

Shakspeare's House. In 1847, a number of persons of distinction interested themselves for the preservation of the house in which Shakspeare was born, then actually put up for sale: they held a meeting at the Thatched-House tavern, London, 26 Aug. in that year, and took measures for promoting a subscription set on foot by the Shakspearian Club at Stratford-upon-Avon; and a committee was appointed to carry out their object. In the end Shakspeare's house was sold at the Auction Mart in the city of London, where it was "knocked down" to the United Committee of London and Stratford for the large sum of 3000*l.* 16 Sept. 1847. In 1856, a learned oriental scholar, John Shakspeare (no relation of the poet), gave 250*l.* to purchase the adjoining house, that it might be pulled down, in order to ensure the poet's house from the risk of fire.

His wife's (Anne Hathaway) cottage and furniture purchased for 3,050*l.*, 5 May, 1893.

Mr. Matthias Mull, a remarkable emendator of Shakespeare's text, died early Oct. 1893.

The hon. Ignatius Donnelly, an American, reports his discovery of a cryptogram of Francis Bacon in the text of one of the plays in the folio of 1623, and thereon asserts his belief that Bacon was the author of the Shakspeare plays, autumn 1887. His book entitled "The Great Cryptogram: Francis Bacon's cipher in the so-called Shakspeare Plays" was published in 1888.

In 1851 there were imported into England 201,859 sheep and lambs; in 1858, 184,482; in 1864, 496,243. See under *Cattle.* In Aug. and Sept. 1862, many sheep in Wiltshire died of smallpox; and on Sept. 11, government declared for enforcing the act for the prevention of contagion. The evil soon abated. In April, 1866, the disease reappeared and the regulations were re-issued.

SHELLS, see *Bombs*.

SHERIFF, or *shire-reeve*, governor of a shire or county. London had its sheriffs prior to William I.'s reign, but some say that sheriffs were first nominated for every county in England by William in 1079. According to other historians, Henry Cornhill and Richard Reynere were the first sheriffs of London, 1 Rich. I., 1189. The nomination of sheriffs, according to the present mode, took place in 1461. *Stow.* Anciently sheriffs were hereditary in Scotland, and in some English counties, as Westmoreland. The sheriffs of Dublin (first called bailiffs) were appointed in 1308, and obtained the name of sheriff by an incorporation of Edward VI. 1548. Thirty-five sheriffs were fined, and eleven excused in one year, rather than serve the office for London, 1734; see *Bailiffs*. The high sheriffs of the counties of England and Wales, except Middlesex and Lancaster, are nominated on the morrow of St. Martin, Nov. 12. This somewhat vice-regal office, of Saxon origin, has gradually lost much of its importance.
The sheriffs' act passed 1887

SHIBBOLETH, the word by which the followers of Jephthah tested their opponents the Ephraimites, on passing the Jordan, about 1143 B.C. *Judges* xii. The term is now applied to any party watchword or dogma.

SHIITES, the Mahometan sect predominating in Persia; see *Mahometanism*.

SHILLING. The value of the ancient Saxon coin of this name was fivepence, but it was reduced to fourpence about a century before the conquest. After the conquest the French *solidus* of twelve pence, in use among the Normans, was called *shilling*. The true English shilling was first coined, some say, in small numbers, by Henry VII., 1504. *Ruding*. A peculiar shilling, value nine pence, but to be current at twelve, was struck in Ireland, 1560; and a large but very base coinage in England for the service of Ireland, 1598. Milled shillings were coined 13 Chas. II. 1662; see *Coins*.

SHILOH, see *Pittsburg*.

SHIP-BUILDING, &c., according to the Greek legends, began with the Egyptians, and ancient drawings of their rude vessels are extant. The Greeks, Phœnicians, and Carthaginians were skilful shipbuilders, and Solomon's "navy of ships" (1 *Kings* ix. 26), was doubtless constructed by Tyrians, 992 B.C. The ships of Tarshish (probably

in Spain), are mentioned in *Psalm* xlviii. 7, *Isaiah* ii. 16, &c. The Romans built their first fleet of boats, by copying a Carthaginian vessel wrecked on their coast, 260 B.C. The dangers of navigation are described in *Psalm* cvii. 23-30, and *Acts* xxvii. Strong vessels were constructed by the Norsemen for invasion and piracy in the 5th century, A.D. *et seq.*, and by the Venetians and other Italians, for commerce and war in the Middle Ages. The first double-decked ship built in England was of 1000 tons burthen, by order of Henry VII., was called the *Great Harry*, and cost 14,000*l*. *Stow*. Port-holes and other improvements were invented by Descharges, a French builder at Brest, in the reign of Louis XII., about 1500. Ship-building was treated as a science by Hoste, 1696. Iron and steel are now greatly used in ship-building.

A prehistoric ship cut out of solid oak, 48 feet long, 4 feet 4 inches wide, and 2 feet deep, was found by the Brigg gas company while excavating near the river Ancholme in Lincolnshire, April, 1885. Mr. Justice Chitty decided 6 July, 1886, that the ship was the property of the owner of the land, Mr. Elwes.

The *France*, a great sailing ship, was built on the Clyde by Messrs. Henderson for a Bordeaux firm; five masts, 360 feet long, 48 feet wide, bowsprit 50 feet long; carrying power over 6,000 tons Sept. 1890

Ships, originally made of wood, and latterly of iron, are now frequently made of steel.

See *Navy*, *Steam*, *Carrack*, &c.

SHIPKA, see *Schipka*.

SHIP-MONEY was first levied about 1007, to form a navy to oppose the Danes. This impost, levied by Charles I. in 1634-6, was much opposed, and led to the revolution. He assessed London in seven ships, of 4000 tons, and 1560 men; Yorkshire in two ships, of 600 tons or 12,000*l*.; Bristol in one ship of 100 tons; Lancashire in one ship, of 400 tons. Among others, John Hampden refused to pay the tax; he was tried in the Exchequer in 1636. The judges declared the tax legal, 12 June, 1637. Ship-money was included in the grievances complained of in 1641. The five judges, who had given an opinion in its favour, were imprisoned. Hampden received a wound in a skirmish with prince Rupert, at Chalgrove, 18 June, and died 24 June, 1643.

SHIPPING, BRITISH. Shipping was first registered in the river Thames in 1786; and throughout the empire in 1787. In the middle of the 18th century, the shipping of England was but half-a-million of tons—less than London now. In 1830, the number of ships in the British empire was 22,785. The merchant shipping act of 1854 was amended in 1867; see *Merchant Shipping Act*, *Navy*, and *Navigation Acts*.

SHIP-RAILWAY, see *Railways*, Oct. 1889.

SHIPWRECKS, see *Wrecks*.

SHIRES, see *Counties* and under *Horse*.

SHIRTS are said to have been first generally worn in the west of Europe early in the 8th century. *Du Fresnoy*. Woollen shirts were commonly worn in England until about 1253, when linen, but of a coarse kind (fine coming at this period from abroad), was first manufactured in England by Flemish artisans. *Stow*.

SHODDY, a kind of soft woollen goods, manufactured from old woollen rags, or the refuse, to which new wool is added, is stated to have been first manufactured about 1813, at Batley, near Dewsbury, Yorkshire.

SHOEBLACK SOCIETY Brigades (Blue, Red, and Yellow) were established at various times, especially in 1850, by Mr. John MacGregor, "Rob Roy," in connexion with the Ragged School Union. In 1855, 108 boys had cleaned 544,800 pairs of boots and shoes, and thus earned 227*l*.; of which 123*5l*. had been paid to the boys, 519*l*. to their bank, and 516*l*. to the society. The brigades earned 454*8l*. in 1859; 11,031*l*. in 1871; 10,936*l*. (in nine districts) in 1886. Ragged School Union reported 319 boys earning 6,770*l*., 1895. There were eleven shoeblack societies in the metropolis in 1888.

SHOEBURYNESS (Essex). Some ground here, purchased in 1842 and 1855, by an act of parliament in 1862 was set apart as "ranges for the use and practice of artillery," and a school for gunnery was established; see *Cannon*, note. Experiments with Mr. Whitworth's projectiles on 12 Nov. 1862, showed their great improvement in form and material. Shells were sent through 5½ inch plate and the wood-work behind it. It was objected, that they might not do this with ships in motion. The National Volunteer Artillery Association began their annual meetings here in July, 1865.

During shell experiments with a new sensitive fuse, col. Francis Lyon (the inventor), col. Fox-Strangways, capt. Francis M. Goold-Adams, and four others were killed, 26 Feb. 1885.

SHOES, among the Jews were made of leather, linen, rush, or wood. Moons were worn as ornaments in their shoes by Jewish women. *Isaiah* iii. 18. Pythagoras would have his disciples wear shoes made of the bark of trees; probably that they might not wear what were made of the skins of animals, as they refrained from the use of everything that had life. The Romans wore an ivory crescent on their shoes, and Caligula enriched his with precious stones. In England, about 1462, the people wore the beaks or points of their shoes so long that they encumbered themselves in walking, and were forced to tie them up to their knees; the fine gentlemen fastened theirs with chains of silver or silver gilt, and others with laces. This was prohibited, on the forfeiture of 20*s*. and on pain of being cursed by the clergy, 7 Edw. IV. 1467; see *Dress*. Shoes, as at present worn, were introduced about 1633. The buckle was not used till 1668. *Stow; Mortimer*. The buckle-makers petitioned against the use of *shoe-strings* in 1791. A strike of London shoemakers respecting wages, April, 1884.

SHOP-TAX enacted in 1785; caused so great a commotion, particularly in London, that it was deemed expedient to repeal it in 1789. The statute whereby *shoplifting* was made a felony, without benefit of clergy, was passed 10 & 11 Will. III. 1699. This statute has been some time repealed.

SHORE, JANE, the mistress of Edward IV. and afterwards of lord Hastings. She did public penance in 1483, and was afterwards confined in Ludgate; but upon the petition of Thomas Hymore, who agreed to marry her, king Richard III., in 1484, restored her to liberty: and sir Thomas More mentions having seen her. *Harleian MSS*.

SHOT. In early times variou missiles were shot from cannon. Bolts are mentioned in 1413; and in 1418 Henry V. ordered his clerk of the ordnance to get 7000 stone shot made at the quarries at Maidstone. Since then chain, grape, and canister shot have been invented, as well as shells, all of which are described in Scoffern's work on "Projectile Weapons of War, and Explosive Compounds," 1858; see *Bombs* and *Cannon*. For Palliser's chilled shot, see *Cannon*.

His patent was revoked soon after the accession of George I., 29 Oct. following, when the earl of Halifax became first lord of the treasury; see *Halifax*. The office of lord treasurer has been executed by commissioners ever since.

SHREWSBURY (Shropshire), arose after the ruin of the Roman town Uriconium (see *Wroxeter*), and became one of the chief cities of the kingdom, having a mint till the reign of Henry III. Here Richard II. held a parliament in 1397.—On 23 July, 1403, was fought a sanguinary *battle* at Hateley field, near Shrewsbury, between the army of Henry IV. and that of the nobles, led by Percy (surnamed Hotspur), son of the earl of Northumberland, who had conspired to dethrone Henry. Henry was seen in the thickest of the fight, with his son, afterwards Henry V. The death of Hotspur by an unknown hand gave the victory to the king. *Hume.*—Shrewsbury grammar school was founded by Edward VI. in 1551, endowed by Elizabeth, and opened 1562. An Erythrean sibyl is said to have offered to Tarquin II. nine books containing the Roman destinies, demanding for them 300 pieces of gold. He denied her; whereupon the sibyl threw three of them into the fire, and asked the same price for the other six, which being still denied, she burnt three more, and again demanded the same sum for those that remained, when Tarquin conferring with the pontiffs was advised to buy them. Two magistrates were created to consult them on all occasions, 531 B.C.; see *Quindecemvirs*.

SICILIAN VESPERS, the term given to the massacre of the French (who had conquered Sicily, 1266), commenced at Palermo, 30 March, 1282.

On Easter Monday conspirators assembled at Palermo; and while the French were engaged in festivities, a Sicilian bride passed by with her train. One Drochet, a Frenchman, used her rudely, under pretence of searching for arms. A young Sicilian stabbed him with his own sword; and a tumult ensuing, 200 French were instantly murdered. The populace ran through the city, crying out, "Let the French die!" and, without distinction of rank, age, or sex, slaughtered all of that nation they could find, to the number of about 8000. Even the churches proved no sanctuary, and the massacre became general throughout the island.

SILISTRIA, a strong military town in Bulgaria, European Turkey. It was taken by the Russians, 30 June, 1829, and held some years by them as a pledge for the payment of a large sum by the Porte; but was eventually returned. In 1854 it was again besieged by the Russians, 30,000 strong, under prince Paskiewitch, and many assaults were made. The Russian general was compelled to retire in consequence of a dangerous contusion. On 2 June, Mussa Pacha, the brave and skilful commander of the garrison, was killed. On 9 June, the Russians stormed two forts, which were retaken. A grand assault took place on 13 June, under prince Gortschakoff and general Schilders, which was vigorously repelled. On the 15th, the garrison assumed the offensive, crossed the river, defeated the Russians, and destroyed the siege works. The siege was thus raised, and the Russians commenced their retreat as Omar Pacha was drawing near. The garrison was ably assisted by two British officers, capt. Butler and lieut. Nasmyth, the former of whom, after being wounded, died of exhaustion. They were highly praised by Omar Pacha and lord Hardinge, and lieutenant Nasmyth was made a major. Population, 1888, 11,414.

SILK. Wrought silk was brought from Persia to Greece, 325 B.C. Known at Rome in Tiberius's time, when a law passed in the senate prohibiting the use of plate of massive gold, and also forbidding men to debase themselves by wearing silk, fit only for women. Silk was at first of the same value with gold, weight for weight, and was thought to grow in the same manner as cotton on trees. Silkworms were brought from India to Europe in the 6th century. Charlemagne sent Offa, king of Mercia, a present of two silken vests, 780. The manufacture was encouraged by Roger, king of Sicily, at Palermo, 1146, when the Sicilians not only bred the silk-worms, but spun and wove the silk. The manufacture spread into Italy and Spain, and also into the south of France, a little before the reign of Francis I. about 1510; and Henry IV. propagated mulberry-trees and silk-worms throughout the kingdom, about 1600. In England, silk mantles were worn by some noblemen's ladies at a ball at Kenilworth castle, 1286. Silk was worn by the English clergy in 1534. Manufactured in England in 1604; and broad silk wove from raw silk in 1620. Brought to perfection by the French refugees in London at Spitalfields, 1688. A silk-throwing mill was made in England, and fixed up at Derby, by sir Thomas Lombe, merchant of London, modelled from the original mill then in the king of Sardinia's dominions, about 1714. He obtained a patent in 1718, and died 3 Jan. 1739. Six new species of silk-worm were rearing in France, 1861.*

The Silk association of Great Britain and Ireland begun, 1886-7; first exhibition St. James's square, London, S.W. (opened by the duchess of Teck), 6-21 May, 1890; others since.

SILKWORM DISEASE. In 1853 the annual produce of sericulture in South France was estimated at about 4,680,000*l.* Soon after a disease broke out in the worms, which reduced the value of the silk crop to about one-third that amount. In 1858 a commission was appointed to inquire into the nature of the disease, then termed *pébrine;* and M. Quatrefages, in 1869, proved that it is hereditary, contagious, and infectious. M. Filippi discovered in the blood of the diseased worms a multitude of cylindrical corpuscles, since named *panhistophyton,* which Pasteur, who took up the study in 1865, has demonstrated to be parasitical, and the cause of the disease. He has since devised a way by which, it is hoped, the organic germs may be got rid of, and the disease extirpated.

SILURES, a British tribe, occupying the counties of Monmouth and Hereford, was subdued by the Roman general Ostorius Scapula, 50; see *Shropshire*. From this tribe is derived the geological term "Silurian strata," among the lowest of the palæozoic or primary series, from their occurrence in the above-mentioned counties. *Murchison's "Siluria"* was published 1849.

SILVER exists in most parts of the world, and is found mixed with other ores in various mines in Great Britain. The silver mines of South America are far the richest. A mine was discovered in the district of La Paz in 1660, which was so rich that the silver of it was often cut out with a chisel. In 1749, one mass of silver weighing 370 lbs. was sent to Spain. From a mine in Norway, a piece of silver was dug, and sent to the Royal Museum at Copenhagen, weighing 560 lbs., and worth 1680*l.* In England silver-plate and vessels were first used by Wilfrid, a Northumbrian bishop, a lofty and ambitious man, 709. *Tyrrell.* Silver knives, spoons, and cups, were great luxuries in 1300; see *Mirrors.* The act of 1816 restricted the use of silver as legal tender to 40*s.* In 1855, 561,906 oz., in 1857, 532,866 oz., in 1865, 724,856 oz., in 1870, 784,562 oz.; in 1876, 483,422 oz.; in 1882, 372,544 oz.; in 1887, 320,345 oz.; in 1888, 321,425 oz.; in 1889, 306,149 oz.; in 1890, 291,724 oz.; 1893, 274,100 oz.; 1896, 283,826 oz. were obtained from mines in Britain. Estimated annual production of silver throughout the world, 1,477 tons; value, 37,360,000*l.* (1892). Pattinson's process for obtaining silver from lead ore was introduced in 1829. SIMONIANS, a sect named after the founder, Simon Magus, the first heretic, about 41. A sect of social reformers called ST. SIMONIANS, after their founder, Claude H. comte de St. Simon (born 1760), sprang up in France in 1819, and attracted considerable attention; the doctrines were advocated in England, particularly by Dr. Prati, who lectured upon them in London, 24 Jan. 1834. St. Simon died in 1825, and his follower, Père Enfantin, died 1 Sept. 1864.

SIMONY (trading in church offices), derives its name from Simon desiring to purchase the gift of the Holy Spirit (*Acts* viii. 18, 19). It is forbidden in England by the canon law, and by statute 31 Eliz. c. 6, "for the avoiding of simony and corruption in presentations, collations, and donations of and to benefices," &c., 1588-9; and by statute of 12 Anne 2, stat. 12 (1713). The rev. James John Merest was convicted of simony, 26-29 Nov. 1869, and deprived.

The bishop of Peterborough (Dr. Magee), moved for a committee on the laws relating to simony; appointed . . . . . 21 April, 1874

SIMPLON, a mountain road, leading from Switzerland into Italy, constructed by Napoleon in 1801-7. It winds up passes, crosses cataracts, and passes by galleries through solid rock, and has eight principal bridges. The number of workmen employed at one time varied from 30,000 to 40,000.

SINAI, MOUNT. Here the ten commandments were promulgated, 1491 B.C. *Exod.* xx. After much investigation and discussion by many persons, Dr. Beke stated that he had discovered the true Sinai, Feb. 1874.

SINALUNGA or ASINALUNGA (near Siena, Italy). Here Garibaldi, when about to enter the papal territory, was seized and conveyed to Alessandria, 23 Sept. 1867; see *Italy.*

SINDE (N. W. India), was traversed by the Greeks under Alexander, about 326 B.C.; conquered by the Persian Mahometans in the 8th century A.D.; tributary to the Ghaznevide dynasty in the 11th century; conquered by Nadir Shah, 1739; reverted to the empire of Delhi after his death, 1747; after various changes of rulers, Sinde was conquered by the English under Sir Charles Napier, *see India* and *Meeanee*, and annexed, March, 1843.

SINKING FUND. First projected by sir Robert Walpole to redeem the debt to the bank of England; act passed in 1716. The act establishing the sinking fund of Mr. Pitt, devised by Dr. Price, was passed in March, 1786. A then estimated surplus of 900,000*l.* in the revenue was augmented by new taxes to make up the sum of 1,000,000*l.* which was to be invariably applied to the reduction of the national debt. The fallacy of the scheme was shown by Dr. Hamilton in 1813. In July, 1828, the sinking fund was limited to one-fourth of the actual surplus of revenue.

A new sinking fund was established by Act passed 2 Aug. 1875. The annual charge of the national debt of the year ending 31 March, 1877 to be 27,700,000*l.*; subsequent years to be 28,000,000*l.* This act was temporarily suspended in 1897.

SINOPE, an important Greek colony on the Euxine, after resisting several attacks was conquered by Mithridates IV., king of Pontus, and made his capital. It was the birth-place of Diogenes, the cynic philosopher. On 30 Nov. 1853, a Turkish fleet of seven frigates, three corvettes, and two smaller vessels, was attacked by a Russian fleet of six sail of the line, two sailing vessels, and three steamers, under admiral Nachimoff, and totally destroyed, except one vessel, which conveyed the tidings to Constantinople. Four thousand lives were lost by fire or drowning, and Osman Pacha, the Turkish admiral, died at Sebastopol of his wounds. In consequence of this act (considered treacherous) the Anglo-French fleet entered the Black Sea, 3 Jan. 1854.

SION COLLEGE AND HOSPITAL, situated on the site of a nunnery, which, having fallen to decay, was purchased by William Elsynge, a citizen and mercer, and converted into a college and hospital, called from his name Elsynge Spital. In 1340 he changed it to an Austin priory, which was afterwards granted by Henry VIII. to sir John Williams, master of the jewel-office, who, with sir Roland Hayward, inhabited it till its destruction by fire. In 1623, Dr. Thomas White having bequeathed 3000*l.* towards purchasing and building a college and alms-house on the ancient site, his executors erected the present college. It is held by two charters of incorporation, 6 Chas. I. 1630 and 16 Chas. II. 1664. It contains a valuable library (easily accessible to the public), and an almshouse for ten men and ten women. New buildings erected on the Thames Embankment; memorial stone laid 21 April, 1885; opened by the prince of Wales, 15 Dec. 1886.

SIRENE, an instrument for determining the velocity of aërial vibrations corresponding to the different pitches of musical sounds, was invented by baron Cagniard de la Tour of Paris in 1819. The principle was shown in an apparatus exhibited by Robert Hooke before the Royal Society, 27 July, 1681.

SISTERHOODS in the English church were begun by Lydia Priscilla Sellon about 1846, in Devonshire; she died, Nov. 1876.

SISTERS OF CHARITY, an order for the service of the sick poor, was founded by Vincent de Paul, in 1634. Their establishment in London began in 1834.

SIX ACTS, a term given to certain acts, also named "Gagging Acts," 60 Geo. III. & 1 Geo. IV. cc. 1, 2, 4, 6, 8, 9, passed in 1819-1820 to suppress seditious meetings and publications.

SIX CLERKS, officers of the court of chancery, who were anciently *clerici* or *clergy*. They were to conform to the laws of celibacy, and forfeit their places if they married; but when the constitution of the court began to alter, a law was made to permit them to marry; statute 24 & 25 Hen. VIII. 1533. The six clerks continued for many years officers of the chancery court, and held their offices in Chancery-lane, London, where proceedings by bill and answer were transacted and filed, and certain patents issued. *Law Dict.* The six clerks were discontinued by 5 & 6 Vict. c. 103, 1841.

They at first supported the catholic league, and attempted to overthrow Henry III. in 1587, but vacillating in their policy, and committing many crimes, their power was annihilated by Mayenne in 1591, and several of them were executed.

SLAVERY. The traffic in men came from Chaldæa into Egypt, Arabia, and all over the East. In Greece, in the time of Homer, all prisoners of war were treated as slaves. The Lacedæmonian youths, trained up in the practice of deceiving and butchering slaves, were from time to time let loose upon them to show their proficiency; and once, for amusement only, murdered, it is said, 3000 in one night, see *Helots*. Alexander, when he razed Thebes, sold the whole people for slaves, 335 B.C. There were 400,000 slaves in Attica, 317 B.C. In Rome slaves were often chained to the gate of a great man's house, to give admittance to the guests invited to the feast. By one of the laws of the XII. Tables, creditors could seize their insolvent debtors, and keep them in their houses, till by their services or labour they had discharged the sum they owed. Cæcilius Isidorus left to his heir 4116 slaves, 12 B.C. The first Janissaries were Christian slaves, 1329.

SLAVERY IN ENGLAND. Laws respecting the sale of slaves were made by Alfred. The English peasantry were commonly sold for slaves in Saxon and Norman times; children were sold in Bristol market like cattle for exportation. Many were sent to Ireland and to Scotland. Under the Normans the vassals (termed villeins, of and pertaining to the *vill*) were devisable as chattels during the feudal times.

Severe statutes were passed in the reign of Richard II., 1377 and 1385; the rebellion of Wat Tyler, 1381, arose partly out of the evils of serfdom.
A statute was enacted by Edward VI. that a runaway, or any one who lived idly for three days, should be brought before two justices of the peace, and marked V with a hot iron on the breast, and adjudged the slave of him who bought him for two years. He was to take the slave and give him bread, water, or small drink, and refuse meat, and cause him to work by beating, chaining, or otherwise; and, if within that space, he absented himself fourteen days, was to be marked on the forehead or cheek, by a hot iron, with an S, and be his master's slave for ever; second desertion was made felony. It was lawful to put a ring of iron round his neck, arm, or leg. A child might be put apprentice, and, on running away, become a slave to his master 1547
Queen Elizabeth ordered her bondsmen in the western counties to be made free at easy rates . 1574
Serfdom was finally extinguished in 1660, when tenures in capite, knights' service, &c., were abolished.
A slave named Somerset, brought to England, was, because of his ill state, turned adrift by his master. By the charity of Mr. Granville Sharp he was restored to health, when his master again claimed him. A suit was the consequence, which established, by decision of the Court of King's Bench, in favour of Somerset, that slavery could not exist in Great Britain 22 June, 1772

SLAVERY IN UNITED STATES. Before the war of independence all the states contained slaves. In 1783 the statement in the Massachusetts Bill of Rights, "All men are born free and equal," was declared in the supreme court at Boston to bar slave-holding in that state. Slaves in the United States in 1790, 697,897; in 1810, 1,191,364; in 1820, 2,009,031; in 1850, 3,204,313; in 1860, 4,002,996. In 1870, 4,889,193, free coloured persons.

Congress passes unanimously the celebrated ordinance "for the government of the territory to the N.W. of the Ohio," which contained an "*unalterable*" article, forbidding slavery or involuntary servi-

The enormous increase in the growth of cotton in the southern states (see *Cotton*) led to a corresponding increase in the demand for slave labour. SLAVE TRADE. The slave trade from Congou and Angola was begun by the Portuguese in 1481. The commerce in man has brutalised a tract fifteen degrees on each side of the equator, and forty degrees wide, or of 4,000,000 of square miles; and men and women have been bred for sale to the Christian nations during the last 250 years, and war carried on to make prisoners for the Christian market. The Abbé Raynal computed (1777) that, at the time of his writing, 9,000,000 of slaves had been consumed by the Europeans. The slave-trade is now approaching extinction.

In 1768 the slaves taken from Africa amounted to 104,100. In 1786 the annual number was about 100,000.
In 1807 it was shown by documents, produced by government, that since 1792 upwards of 3,500,000 Africans had been torn from their country, and had either perished on the passage or been sold in the West Indies.
Slave Trade of England: begun by sir John Hawkins. His first expedition, with the object of procuring negroes on the coast of Africa, and conveying them for sale at the West Indies, took place in Oct. 1562; see *Guinea*, and *Assiento*.
England employed 130 ships and carried off 42,000 slaves, 1786.

SLAVONIA or **SCLAVONIA**, a province of Austria, derives its name from the Slaves, a Sarmatian people who replaced the Avars in Pannonia early in the 9th century. In 864 Cyril and Methodius, Greek missionaries, preached here, and adapted the Greek alphabet to the Slavonian language; the letters of which have since been a little altered.

The country, after having been held at times by the Greeks, Turks, and Hungarians, and the cause of sanguinary conflicts, was ceded finally to Hungary in 1699, at the peace of Carlowitz. Deputies from the Slavonian provinces of Austria were entertained at Moscow and St. Petersburg, May, 1867. The Croatian-Slavonian diet, at Agram, was dissolved, May, 1867. It protested against incorporation with Hungary. The Slavonian family of languages includes Russian, Polish, Servian, Bohemian, Bulgarian, Wendic, Slovak, and Polabic. SMALLPOX, *variola* (diminutive of *varus*, a pimple), a highly contagious disease, supposed to have been introduced into Europe from the East by the Saracens. Rhazes, an Arabian, described it accurately, about 900. From Europe it was carried to America, soon after its discovery, and raged there with great severity, destroying the Indians by thousands. In 1694, queen Mary of England died of smallpox, as did in 1711 and 1712 the emperor of Germany, the dauphin and dauphiness of France and their son, in 1730 the emperor of Russia, in 1741 the queen of Sweden, and in 1774 Louis XV. of France. It is stated that in the middle of the last century two millions perished by it in Russia. In London in 1723 one out of fourteen deaths was caused by smallpox, and in France in 1754 the rate was one in ten. For the attempts to alleviate this scourge, see *Inoculation*, introduced into England in 1722, and *Vaccination*, announced by Dr. Jenner in 1798. *Smallpox Hospital*, established 1746. Smallpox raged in parts of London, and thousands died, 1870-1; a temporary hospital was established at Hampstead (*which see*). The Anti-Vaccination society has been active, and many parents have been fined for opposing the vaccination of their children, 1870-6. In Sept. and Oct. 1862, a great many sheep died of smallpox in the West of England, till successful preventive measures were resorted to. Many cases in London, 1876-8; deaths principally of unvaccinated persons.

The value of the property is now 17,000*l.* a year (1889). The master of the rolls decided in Dec. 1877, that the funds should be applied to general charitable purposes. On appeal, the decision was in favour of the "poor Smiths," 12 Feb. 1878.

SMITHFIELD, WEST, in the heart of London, was once a favourite walk of the London citizens, outside the city walls. Sir W. Wallace was executed here, 23 Aug. 1305. On 15 June, 1381, Wat Tyler was met by Richard II. at this place, and was stabbed by Walworth the mayor. Many tournaments were also held here. In the reign of Mary (1553-8), many persons perished by fire; and Bartholomew Leggatt, an Arian, was burnt here, 18 March, 1612.—Bartholomew fair was

held here till 1853.—This place is mentioned as the site of a cattle market as far back as 1150. The space devoted to this purpose was enlarged from about three acres to four and a half, and in 1834 to six and a quarter. The ancient regulations were called the "statutes of Smithfield." In one day there were sometimes assembled 4000 beasts and 30,000 sheep. The annual amount of the sales was about 7,000,000*l.*

Sold here 226,132 beasts, 1,593,270 sheep and lambs, 26,356 calves, 33,531 pigs. (About 160 salesmen) 1846
The contracted space of the market, the slaughtering places adjoining, and many other nuisances, gave ground to much dissatisfaction, and after investigation, an act was passed appointing metropolitan market commissioners with powers to provide a new market, slaughtering places, &c.; and to close the market at Smithfield . 1 Aug. 1851

It includes the U.S. national museum, the zoological park, and the astrophysical observatory, and publishes and freely distributes scientific memoirs and reports. The library was burnt on 25 Jan. 1865. Professor Joseph Henry, the first secretary, died, 13 May, 1878; succeeded by Mr. Spencer F. Baird, died, 19 Aug. 1887; succeeded by Professor S. P. Langley.

SMOLENSKO (Russia). The French in most sanguinary engagements here were three times repulsed, but ultimately succeeded in entering Smolensko, and found the city, which had been bombarded, burning and partly in ruins, 16, 17 Aug. 1812. Barclay de Tolly, the Russian commander-in-chief, incurred the displeasure of the emperor Alexander because he retreated after the battle, and Kutusoff succeeded to the command.

SMUGGLING. The customs duties, instituted to enable the king to afford protection to trade against pirates, afterwards became a branch of public revenue, and gave rise to much smuggling. The Smugglers' act was passed in 1736, and its severity was mitigated in 1781 and 1784. A revision of these statutes took place 1826 and 1835. Lieut. the hon. H. N. Shore's "Smuggling Days and Smuggling Ways," published 1892.

SNEEZING. The custom of saying "God bless you" to the sneezer originated, according to Strada, among the ancients, who, through an opinion of the danger attending it, after sneezing made a short prayer to the gods, as "Jupiter, help me." The custom is mentioned by Homer, the Jewish rabbis, and others, and is found among savages. Polydore Vergil says it took its rise at the time of the plague, 558, when the infected fell down dead sneezing, though seemingly in good health.

SOAP is a salt, a compound of a fatty acid with an alkali, soda or potash. The Hebrew *bôrîth*, translated soap, is merely a general term for cleansing substances. *Job* ix. 30; *Jer.* ii. 22. Pliny declares soap to be an invention of the Gauls, though he prefers the German to the Gallic soap. Nausicaa and her attendants, Homer tells us, washed clothes by treading upon them with their feet in pits of water. *Odyssey*, book vi. The Romans used fuller's earth. *Savon*, the French word for soap, is ascribed to its having been manufactured at Savona, near Genoa. The manufacture of soap began in London in 1524, before which time it was supplied by Bristol at one penny per pound. The duty upon soap, imposed in 1711, after several reductions from 3*d.* per pound, was totally repealed in 1853. It then produced, according to the chancellor of the exchequer, Mr. Gladstone, about 1,126,000*l.* annually. Exported from the United Kingdom: 1876, 254,853 cwts.; 1880, 391,808 cwts.; 1885, 402,112 cwts.; 1890, 496,930 cwts.; 1893, 605,083 cwts.; 1896, 719,700 cwts.

The enemy was dislodged after a dreadful contest, and all their batteries taken; and in attempting the passage of the river by a floating bridge in their rear, the weight of the masses that crowded upon it caused it to break down, and thousands of Sikhs were killed, wounded, or drowned. The British loss was 2338 men.

SOCIALISM, which proposes the re-organisation of society for the benefit of the community at the expense of the individual, was warmly advocated in London, 24 Jan. 1834, by Robert Owen. He had, beginning at New Lanark, in Scotland, about 1801, established a settlement at New Harmony in America in 1824. He died 17 Nov. 1858, aged 90. The French socialists, termed *Communists*, became a powerful political body in that country, were implicated in the revolution of 1848, and made an insurrection at Paris, 1871. See *France*, *Germany*, 1878 *et seq.*, *Positive Philosophy*, and *Working-men* (who, in Great Britain, have received by legislation nearly all they require). See *Individualism*.

SOCIETY ISLANDS, Pacific Ocean, discovered by De Quiros in 1606; re-discovered by capt. Wallis, 1767, who gave Otaheite or Tahiti the name of King George's Island. Capt. Cook, who visited them in 1769 and 1777, named them Society Islands in honour of the Royal Society; they now belong to France. An insurrection in Raiatea suppressed, 3 Jan. 1897. See *Otaheite*.

SOCINIANS, persons who accept the opinions of Faustus Socinus (died 1562), and his nephew Lælius (died 1604), Sienese noblemen. They held —1. That the Eternal Father was the one only God, and that Jesus Christ was no otherwise God than by his superiority to all other creatures; 2. That Christ was not a mediator; 3. That hell will endure for a time, after which the soul and body will be destroyed; 4. That it is unlawful for princes to make war. *Hook.* The Socinians established a church at Rakow, in Poland, and made proselytes in Transylvania, 1563. They were expelled from Poland in 1658. The Rakovian catechism was published in 1574; see *Unitarians*.

SOCIOLOGY, a term applied by Comte to the study of mankind in their social relations; it recommends the prevention of national wars by arbitration, and the settlement of the war of classes by boards of conciliation. It is regarded by M. Fustel de Coulanges as equivalent to History.

SODIUM, a remarkable metal, first obtained in 1807 by sir Humphry Davy, from soda (which was formerly confounded with potash, but proved to be a distinct substance by Duhamel in 1736). This metal, like potassium, was obtained by the agency of the electric battery. In consequence of Deville's improved processes, sodium manufactured by Bell Brothers, of Newcastle, at 10*s.* a pound (1868). It is an important agent in the modern production of aluminium. Common salt (chloride of sodium) is a compound of sodium and chlorine. Mr. H. Y. Castner's (of New York) new process for the enlarged production of sodium, and through sodium of aluminium and magnesium, announced in June, 1887. His works were set up at Oldbury, near Birmingham; the price of sodium in 1889 was about 4*s.* 4*d.* a pound. See *Alkalies* and *Aluminium*.

SOISSONS (France), capital of the Gallic Suessiones, was subdued by Julius Cæsar, 57 B.C. It was held by Syagrius, after his father Ægidius, till his defeat by Clovis, A.D. 486. Several councils have been held at Soissons (in 744, 1092, 1122). Its academy was established in 1674. During the Franco-Prussian war, Soissons, after three weeks' investment and four days' bombardment, surrendered to the Germans under the grand-duke of Mecklenburg, 16 Oct. 1870. 99 officers, 4633 men, 128 guns, &c., were said to be taken. The Germans thus obtained a second line of railway from Châlons to Paris.

SOLAR SYSTEM, nearly as now accepted, is said to have been taught by Pythagoras of Samos, about 529 B.C. He placed the sun in the centre, and all the planets moving in elliptical orbits round it—a doctrine superseded by the Ptolemaic system (*which see*). The system of Pythagoras, revived by Copernicus (1543), is called the Copernican system. Its truth was demonstrated by sir Isaac Newton in 1687. See *Planets*.

SOLFERINO (in Lombardy), the site of the chief struggle on the great battle of 24 June, 1859, between the allied French and Sardinian army commanded by their respective sovereigns, and the Austrians under general Hess; the emperor being present. The Austrians, after their defeat at Magenta, gradually retreated across the Mincio, and took up a position in the celebrated quadrilateral, and were expected there to await the attack. But the advance of Garibaldi on one side, and of prince Napoleon and the Tuscans on the other, induced them to recross the Mincio and take the offensive, on 23 June. The conflict began early on the 24th, and lasted fifteen hours. At first the Austrians had the advantage; but the successful attack of the French on Cavriana and Solferino changed the fortune of the day, and the Austrians, after desperate encounters, were compelled to retreat. The French attribute the victory to the skill and bravery of their emperor and the generals MacMahon and Niel; the Austrians, to the destruction of their reserve by the rifled cannon of their adversaries. The Sardinians maintained a fearful contest of fifteen hours at San Martino, it is said against double their number. Loss of the Austrians, 630 officers, and 19,311 soldiers; of the allies, 8 generals, 936 officers, and 17,305 soldiers killed and wounded. This battle closed the war; preliminaries of peace being signed at Villa Franca, 12 July. On 24 June, 1870, on the site of the battle, three ossuaries, containing the bones of thousands of the slain, were consecrated in the presence of representatives of Austria, France, and Italy. The Ossuary tower inaugurated, and a colossal statue of king Victor-Emmanuel, unveiled by king Humbert, 15 Oct. 1893.

Treaties with native chiefs were made by the British in 1840 and 1854. The country was practically annexed by Egypt between 1873–77, but was given up and eventually occupied by the British, who declared a protectorate in 1885 to the great satisfaction of the people. Lake, for having tapped a barrel of beer when the ship was on short allowance. After sustaining life for eight days on a few limpets and rain-water, he was saved by an American vessel, 13 Dec. 1807; and returned to England. Sir Francis Burdett advocated his cause in parliament, and he received 600*l.* as a compensation from captain Lake, who was tried by a court-martial, and dismissed the service, 10 Feb. 1810.

SOMERSET-HOUSE (London), formerly a palace, founded on the site of several churches and other buildings levelled in 1549, by the protector Somerset, whose residence fell to the crown after his execution, 22 Jan. 1552. Here resided at times queen Elizabeth, Anne of Denmark, and Catherine, queen of Charles II. Old Somerset-house, a mixture of Grecian and Gothic, was demolished in 1775, and the present edifice, from a design by sir William Chambers, was erected for public offices. The Royal Academy of Arts first assembled in the apartments given to the members by the king, 17 Jan. 1771. The Royal Society met here, 1780-1857; and apartments here were also held by the Society of Antiquaries and the Geological Society; all three now at Burlington House. Large suites of government buildings were erected in 1774. The Navy-office, Pipe-office, Victualling and other offices, were removed herein 1788, and various government departments since. The east wing forming the King's College (see *King's College*) was completed in 1833. By an act passed in 1854, the offices of the duchy of Cornwall were transferred to Pimlico.

SOMERS-TOWN, a populous district in St. Pancras parish, N. London: named after earl Somers, whose family acquired the property about 1695. The building began about 1786; and many French refugees settled in it. Much of the district has been occupied by the railway companies.

SOMNATH GATES, the gates of an ancient Hindoo temple at Guzerat, which was destroyed by Mahmoud of Ghuznee in 1025. The priests wished to preserve the idol; but Mahmoud broke it to pieces and found it filled with diamonds, &c. He carried the gates to Ghuznee. When that city was taken by general Nott, 6 Sept. 1842, lord Ellenborough ordered the gates to be restored after an exile of 800 years, and issued a proclamation much censured at the time. The gates are made of sandal wood, and are described and figured in the Archæologia of the Society of Antiquaries, vol. xxx.

The first church was dedicated to St. Sophia (holy wisdom) by Constantius II., 360; this having been destroyed, the second, the present edifice, was founded by Justinian, 531, and dedicated 537. Since the Mahometan conquest in 1453, it has been used as an imperial mosque. Its length is 269 feet, and its breadth 243 feet. Six of its pillars are of green jasper, from the temple of Diana, at Ephesus; and of porphyry, from the temple of the Sun, at Rome. Four minarets were added by Selim II., who reigned in 1566. The interior of the dome is beautifully ornamented with mosaic work.

The influence of the Sorbonne was declining when the society was broken up in 1789. The buildings are now

These were bought for 11,000*l.* by 73 English gentlemen, with the view of first exhibiting them to the public, and afterwards selling them to the government (who gradually purchased them between 1858 and 1865). They formed part of the "Art Treasures" exhibited at Manchester in 1857.

SOUND, see *Acoustics*.

SOUND DUTIES. Till the year 1857 no merchant ship was allowed to pass the Sound (a narrow channel separating Zealand from Sweden) without clearing at Elsinore and paying toll. These duties had their origin in an agreement between the king of Denmark and the Hanse towns (1348), by which the former undertook to maintain lighthouses, &c., along the Cattegat, and the latter to pay duty for the same. The first treaty with England in relation to this was in 1450; other countries followed. In 1855 the United States determined to pay the dues no more; and in the

same year the Danish government proposed that these dues should be capitalised; which was eventually agreed to, the sum being 30,476,325 rix-dollars. In Aug. 1857, the British government paid 10,126,855 rix-dollars (1,125,206*l.*) to the Danes as their proportion.—The passage of the Sound was effected, in defiance of strong fortresses, by sir Hyde Parker and lord Nelson, 31 March, 1801; see *Baltic Expedition*.

SOUNDINGS AT SEA. Captain Ross, of H.M.S. *Œdipus*, in 1840, took extraordinary soundings at sea. In the latitude 33° S. and longitude 9° W. about 300 miles from the Cape of Good Hope, 2266 fathoms were sounded; the weight employed amounted to 450 lbs. On 13 July, 1857, lieut. Joseph Dayman, in the North Atlantic Ocean, lat. 51° 9′ N., long. 40° 2′ W., in sounding, found a bottom at 2424 fathoms. The deepest sounding known (3875 faths.) was taken by the *Challenger*, capt. Nares, 24 March, 1873, in the North Atlantic, north of St. Thomas's. See *Deep Sea Soundings*.

SOUTH AUSTRALIA was visited by capt. Sturt in 1830, and explored shortly after by capt. Parker and Mr. Kent, the former of whom was killed by the natives. The boundaries of the province were fixed by 4 & 5 Will. IV. c. 95 (1834); and it was occupied 26 Dec. 1836, by capt. Hindmarsh, the first governor. It was colonised according to Mr. E. Gibbon Wakefield's scheme, which was carried out by the South Australian Colonisation Association. The colony for several years underwent severe trials through the great influx of emigrants, land-jobbing, building speculations, &c., which produced almost universal bankruptcy in 1839. In five years after, the energy of the colonists had overcome their difficulties, and the prosperity of the colony appeared fully established. In 1842 the highly productive Burra Burra copper mines were discovered, and large fortunes were suddenly realised; but in 1851 the discovery of gold in New South Wales and Victoria almost paralysed this province by drawing off a large part of the labouring population. Very little gold was found in South Australia; but a reaction took place in favour of the copper mines and agriculture, &c. Before the discovery of gold, little trade existed between Adelaide (the capital of South Australia) and Melbourne; but in 1852 gold was transmitted from the latter to the former to the amount of 2,215,167*l.* principally for breadstuffs, farm produce, &c. The bishopric of Adelaide was founded in 1847. Discovery of alluvial gold at Tatulpa, Waukaringa, Oct.; favourable report Dec. 1886. SOUTHERN CONFEDERATE STATES, see *Confederates*.

SOUTHERN CONTINENT. The Southern Ocean was first traversed by Magellan in 1520; and explored by Wallis and Carteret in 1766; and by Cook in 1773 and 1774. Of the southern continent little more is known than that it is ice-bound, and contains active volcanoes. It was discovered in the first instance by capt. John Biscoe, on 27 Feb. 1831, in lat. 65° 57′ S., long. 47° 20′ E., extending east and west 200 miles,—this he named Enderby Land, after the gentleman who had equipped him for the voyage. Capt. Biscoe also discovered Graham's Land on 15 Feb. 1832, situated in lat. 67° 1′ S., long. 71° 48′ W. The Messrs. Enderby equipped three other expeditions in search of the southern continent, the last (in connection with some other gentlemen) in 1838, when capt. Balleny had command, who, on 9 Feb. 1839, discovered the Balleny Islands, in lat. 67° S., long. 165° E., and in March, 1839, Sabrina Land, in lat. 65° 10′ S., long. 118° 30′ E. In 1840, a French expedition, under the command of admiral D'Urville, and an American expedition, under the command of commodore Wilkes, greatly added to our knowledge in respect to the existence of a southern continent, and this was again increased by the expedition which sailed from England in 1839, under the command of capt. sir James Clark Ross, who discovered Victoria Land in 1841, and subsequently penetrated as far south as 78° 11′. A special exhibition of works of art, of immense value, lent for the occasion, was opened here in the summer of 1862, and closed in November. SOUTHPORT, Lancashire, a watering place, founded in 1792 on a sandy waste, has rapidly progressed, now possessing an esplanade 3 miles long, and many fine buildings. It was made a municipal borough in 1867, and received the British Association 19 Sept. 1883. Population, 1851, 4,765; 1871, 18,085; 1891, 43,026.

SOUTH-SEA BUBBLE commenced with the establishment of the South-sea company in 1710, which was at first unwisely and afterwards dishonestly managed. It exploded in 1720, ruining thousands of families; and the directors' estates, to the value of 2,014,000*l.*, were seized in 1721 and sold. Mr. Knight, the cashier, absconded with 100,000*l.*; but he compounded the fraud for 10,000*l.* and returned to England in 1743. Almost all the wealthy persons in the kingdom had become speculators; the artifices of the directors having raised the shares, originally 100*l.*, to the price of 1000*l.* A parliamentary inquiry took place in Nov. 1720, and Aislabie, chancellor of the exchequer, and several members of parliament were expelled the house in 1721; see *Law's Bubble*.

SOUTHWARK (S. London), was governed by its own bailiffs till 1327. The city, however, found great inconvenience from the number of malefactors who escaped thither, in order to be out of the reach and cognizance of the city magistrates; and a grant was made of Southwark to the city of London by the crown, for a small annuity. In Edward VI.'s reign it was formed into a city ward, and was named Bridge Ward Without, 1550.—*Southwark bridge* was designed by John Rennie,

and built by a company, 1815-19, at an expense of 800,000*l.* It consists of three great cast-iron arches, resting on massive stone piers and abutments; the distance between the abutments is 708 feet; the centre arch is 240 feet span, the two others 210 feet each; and the total weight of iron 5308 tons. The bridge was freed from toll on 8 Nov. 1864, the company receiving a compensation from the city. An act for the payment of dividends to shareholders was passed in 1872.—*Southwark park* was opened, 19 June, 1869. By the Seats Act (1885), Southwark sends three members to parliament.

The priory church of St. Marie Overie, dating from the 13th century, was leased from the crown to the united parishes of St. Margaret and St. Mary Magdalene, and became the parish church as St. Saviour's in 1540. Since then many changes have been made; Mr. G. Gwilt repaired the tower, the lady chapel, and the choir, 1818 *et seq.* The roof of the nave was removed in 1831, and in 1839 replaced by lath and plaster. The prince of Wales laid the memorial stone of a new nave, 24 July, 1890; the church re-opened after restoration at a cost of over 50,000*l.*, the prince of Wales, the archbishop of Canterbury and others present, 16 Feb. 1897; memorial windows to the prince consort and others unveiled, new clock and bells started by the duke of Connaught, 22 June, 1898.

SOUTHWELL, Nottinghamshire, an ancient Saxon town, where a church was founded by Paulinus, archbishop of York, 627; made collegiate before the conquest, refounded by Henry VIII., and made a bishopric by Henry VIII., 1541; dissolved by Edward VI. Collegiate church restored by Elizabeth, 1586. Near here Charles I. surrendered himself to the Scotch army in 1646. The Bishopries act, authorising the establishment of a see at Southwell, was passed, 16 Aug. 1878. Constituted (to consist of the counties of Derby and Nottingham), 2 Feb. 1884. The restored minster re-opened as cathedral, 2 Feb. 1888.

SPA-FIELDS (N. London). Here about 30,000 persons assembled to vote an address from the distressed manufacturers to the prince regent, 15 Nov. 1816. A second meeting, 2 Dec. following, terminated in an alarming riot; the shops of several gunsmiths were attacked for arms by the rioters; and in the shop of Mr. Beckwith, on Snow-hill, Mr. Platt was wounded, and much injury was done before the tumult was suppressed. For this riot, Cashman, a seaman, was hanged, 12 March, 1817. Watson, the ringleader, escaped to America.

SPANISH GRANDEES, the higher nobility, at one time almost equal to the kings of Castile and Aragon, and often setting their authority at defiance, were restrained on the union of the crowns by the marriage of Ferdinand and Isabella in 1474, who compelled several to relinquish the royal fortresses and domains which they held. Charles V. reduced the grandees to sixteen families (Medina-Sidonia, Albuquerque, &c.), dividing them into three classes.

SPARTA, the capital of Laconia (Greek, Laconica), or Lacedæmon, the most considerable republic of the Peloponnesus, and the rival of Athens. Though without walls, it resisted the attacks of its enemies by the valour of its citizens for eight centuries. Lelex is supposed to have been the first king. From Lacedæmon the fourth king, and his wife Sparta, who are also spoken of as the founders of the city, it obtained names. The Lacedæmonians were a nation of soldiers, and cultivated neither the arts, sciences, commerce, nor agriculture. The early history is traditional and the dates conjectural.

SPEAKER'S COMMENTARY, a name given to an edition of the Bible with a revised text and a commentary by several bishops and other theologians edited by F. C. Cook. The undertaking originated, it is said, chiefly with Mr. John Evelyn Denison, speaker of the house of commons, with the view of opposing the interpretations of Dr. Colenso, and was announced in Nov. 1863. The publication, begun in 1871, was completed in 1881. The Apocrypha published in 1888.

SPECIAL COMMISSION ACT, passed 13 Aug. 1888. A commission constituted to try certain charges and allegations against certain members of parliament. See *Parnellites* and *Ireland*, 1888.

SPECIAL CONSTABLES are sworn in for the preservation of the public peace when disturbances are feared. The laws relative to their appointment were amended in 1831 and 1835. Louis Napoleon, afterwards emperor, aided as a special constable in London, 10 April, 1848; see *Chartists*, and *London*, Dec. 1867. Instructions for their organisation were issued, 13 Jan. 1868. On 28 Jan. 52,974 in the metropolis, and 113,674 in the United Kingdom, had been sworn in. Their services were not required, and they were honourably dismissed by an order issued 31 March, 1868.

Special constables were sworn in in relation to the disturbances in Trafalgar Square (see *Riots*) 17 Nov. *et seq.*; 1,500 held Trafalgar Square, Sunday, 20 Nov. 1887; served till 18 Jan. 1888, and thanked.

SPECIES. Much controversy among naturalists arose in consequence of the publication, in 1859, of Mr. Charles Darwin's "Origin of Species," in which he suggests that all the various species of animals were not created at one time, but have been gradually developed by what he terms "natural selection," and the struggle for life in which the strong overcome the weak.

"This preservation of favourable individual differences and variations, and the destruction of those which are injurious, I have called *natural selection*, or the survival of the fittest."—*Darwin.*

The idea was put forth by Lamarck in his "*Philosophie Zoologique*," 1809. Similar views appear in the "Vestiges of Creation," 1844. Mr. Darwin says, that he infers "from analogy that probably all the organic beings which have ever lived on the earth have descended from some one primordial form, into which life was first breathed by the Creator." See *Development* and *Evolution.*

Charles Darwin was born 12 Feb. 1809; and died 19 April, 1882.

Statue of Darwin by J. E. Boehm, paid for by universal subscription, received at the British Museum of Natural History by the prince of Wales, and uncovered by professor Huxley, 9 June, 1885.

His Life and Letters edited by his son Francis Darwin, published Nov. 1887.

Professor G. J. Romanes' elaborate work, "Darwin and after Darwin," was published in 1892.

SPECIFIC GRAVITIES. See under *Weights.*

SPECTACLES, unknown to the ancients, are generally supposed to have been invented by Alexander de Spina, a monk of Florence, in Italy, about 1285. According to Dr. Plott, they were invented by Roger Bacon, about 1280. Manni attributes them to Salvino, who died 1317. On his tomb at Florence is the inscription, "Qui giace Salvino degli Armati, inventore degli occhiali: Dio gli perdoni le peccata" ("Here lies Salvino degli Armati, inventor of spectacles: May God pardon his sins").

SPECTATOR. The first number of this periodical appeared on 1 March, 1711; the last was No. 635, 20 Dec. 1714. The papers by Addison have one of the letters C L I O at the end. The most of the other papers are by sir Richard Steele, a few by Hughes, Budgell, Eusden, Miss Shephard, and others.—The *Spectator* newspaper (philosophical, whig), begun 5 July, 1828. Mr. Richard Holt Hutton, an able scholar, was editor from 1861 for 40 years, he died 9 Sept. 1897.

SPECTRUM, the term given to the image of the sun or any other luminous body formed on a wall or screen, by a beam of light received through a small hole or slit, and refracted by a prism. The colours thus produced are red, orange, yellow, green, blue, indigo, and violet. The phenomena were first explained by Newton, whose "Optics" was published in 1704. Several of these colours are considered to be compounds of three primary ones: by Mayer (1775), red, yellow, and blue;—by Dr. Thos. Young (1801), red, green, and violet;—by Prof. Clerk Maxwell (1860), red, green, and blue. As the colour of a flame varies according to the substance producing it or introduced into it, so the spectrum varies. This led to the invention of a method of chemical analysis by professors Bunsen and Kirchhoff (1860), by which they discovered two new metals, and drew conclusions as to the nature of the atmosphere of the sun and stars, and of the light of the nebulæ, by comparing the spectrum with that produced by flames into which iron, sodium, and other substances have been introduced. For the invisible rays of the spectrum, see *Calorescence*, *Fluorescence*, *Bolometer*, and *Röntgen Rays.*

Fraunhofer's Lines. In 1802 Dr. Wollaston observed several dark lines in the solar spectrum; in 1815 Joseph Fraunhofer not only observed them, but constructed a map of them, giving 590 lines or dark bands. By the researches of Brewster and others the number observed is now above 2000.

Mr. Fox Talbot observed the orange line of strontium in the spectrum in 1826; and sir David Brewster observed other lines, 1833-42-3. In 1862-3 Mr. William Huggins analysed the light of the fixed stars and of the nebulæ; and in 1865 Dr. Bence Jones, by means of spectrum analyses, detected the presence of minute quantities of metals in the living body, introduced only a few minutes previously.

A spectroscopic society in Italy published a journal early in 1872.
H. Schellen's "Spectralanalyse" published 1870; new edition 1883.
Sir H. Roscoe's "Spectrum Analysis" published 1867-85.

SPHERES. The celestial and terrestrial spheres and sun-dials are said to have been invented by Anaximander, 552 B.C.; and the armillary sphere by Eratosthenes, about 225 B.C. The planetarium was constructed by Archimedes before 212 B.C. Pythagoras maintained that the motions of the twelve spheres must produce delightful sounds, inaudible to mortals, which he called the music of the spheres.

SPINNING was ascribed by the ancients to Minerva, the goddess of wisdom. Arcas, king of Arcadia, taught his subjects the art about 1500 B.C. Tradition reports that Lucretia with her maids was found spinning, when her husband Collatinus paid a visit to her from the camp, that the wife of Tarquin was an excellent spinner, and that a garment made by her, worn by Servius Tullius, was preserved in the temple of Fortune. Till 1767, the spinning of cotton was performed by the hand spinning-wheel, when Hargreaves, an ingenious mechanic, near Blackburn, made a spinning jenny, with eight spindles, and also erected the first carding machine, with cylinders. Arkwright's machine for spinning by water was an extension of the principle of Hargreaves; but he also applied a large and small roller to expand the thread, for which he took out a patent in 1769. At first he worked his machinery by horses; but in 1771 he built a mill on the stream of the Derwent, at Cromford. In 1774-9, Crompton invented the mule (*which see*).

SPIRES (in Bavaria). The emperors held many diets at Spires since 1309, and it was the seat of the imperial chamber till 1689, when the city was burned by the French, and not rebuilt till after the peace of Ryswick, in 1697. The diet to condemn the reformers was held at Spires, called there by the emperor Charles V. 1529; see *Protestants*.

SPIRIT-LEVEL. The invention is ascribed to J. Melchisedec Thevenot, who died 1692.

SPIRIT-MOTOR, Mr. Yarrow explained to the Institute of Naval Architects his method of employing vaporised spirit instead of steam in the propulsion of steam launches, thus dispensing with the use of a boiler, &c., March, 1888. Petroleum is used as fuel.

SPIRITS, see *Distillation*. In all nations spirituous liquors have been considered as a proper subject of heavy taxation for the support of the state; the duty imposed on spirits in 1746 led to much smuggling, *which see*; see *Alcohol*, *Brandy*, *Rum*, *Methylated Spirits*, *Whisky*, &c.

In 1840 England made about ten millions of gallons of spirits, Scotland about seven millions of gallons, and Ireland about nine millions of gallons

In 1859, 27,657,721 gallons of spirits were distilled in the United Kingdom. The uniform duty of 8*s.* per gallon was paid on 24,254,403 gallons for home consumption, producing 9,701,764*l.* In the year 1865-6 the tax produced about 13,955,000*l.*, being the largest sum then ever raised by indirect taxation. In 1871-2, 16,798,344*l.* (customs and excise); in 1875-6, 21,295,663*l*; in 1877-8, 20,675,928*l.*; in 1883–4, 18,435,957*l.*; in 1887–8, 17,312,550*l.*; in 1888–9, 17,175,797*l.*; in 1889–90, 18,531,277*l.*; in 1890–1, 19,263,541*l.*

SPIRITS ACT (43 & 44 Vict. c. 24), passed 26 Aug., 1880, consolidated and amended the law relating to the manufacture and sale of spirits.

SPIRITUAL COMBATANTS (Dukhobortsy). A Russian communistic religious sect formed by a quaker missionary near the end of the last century, now settled in the Caucasus, about 20,000 members. Its leading tenet, the refusal of all military service, so important in a country like

Russia, has led to its repression and severe punishment. The sect also opposes legal tribunals, oaths, etc. Peter Veriguin, their energetic leader, was exiled to Siberia, 1894–5; count Leo Tolstoy gave a description of the sect and its sufferings, *Times*, 23 Oct. 1895. Continued prosecution of the sect, Oct. 1896.

SPIRITUALISM or SPIRIT-RAPPING. Spiritual manifestations (so called) began, it is said, in America about 1848, and attracted attention in this country about 1851, in the shape of rapping, table-turning, &c. Many inquisitive or credulous persons visited Mr. Daniel Dunglas Hume or Home and Mr. Forster, noted "spiritual mediums." Mr. Home, secretary of the Spiritual Athenæum, Sloane-street, Chelsea, published, in 1863, "Incidents of my Life," in which he states that the only benefit he derived from the "gift" was the convincing many unbelievers of the certainty of a life to come; the *Trials*, April, May, 1868. The "Spiritual Magazine" began Jan. 1860; the "Spiritualist," 9 Nov. 1869. The London Dialectical society published a report on spiritualism in Nov. 1871. Mr. (afterwards sir) Wm. Crookes, in 1871, investigated the phenomena, and ascribed them to "psychic force" ("Quarterly Journal of Science," July and Oct. 1871). Miss Kate Fox, said to be the earliest American medium (about 1852) was married to Mr. H. D. Jencken, in London, Dec. 1872.

In 1874 Messrs. Maskelyne and Cooke, and Dr. Lynn, exhibited tricks by which they said they demonstrated the imposture of spiritualism.

SPITALFIELDS (East London), so named from the priory of St. Mary Spittle, dissolved 1534. Here the French protestant refugees settled and established the silk manufacture in 1685. In consequence of commercial changes the weavers endured much distress about 1829.

SPITHEAD, a roadstead near the Spit, a sandbank between Portsmouth and the Isle of Wight. See *Naval Reviews*, under *Navy of England*.

SPITZBERGEN, an archipelago in the Arctic ocean, discovered in 1553 by sir Hugh Willoughby, who called it Greenland, supposing it to be a part of the western continent. In 1595 it was visited by Barents and Cornelius, two Dutchmen, who pretended to be the original discoverers, and called it Spitzbergen, or sharp mountains, from the many sharp pointed and rocky mountains with which it abounds; see *Phipps*.

A scientific expedition to Spitzbergen organized by Herr Stänglin of Stuttgart, left Bremen about 29 July; returned . . . . . 26 Aug. 1891
An expedition under sir Martin Conway, Mr. Trevor-Battye and others arrives at Advent Bay, 20 June; crosses from west to east, reaching Agardh bay, 17 July, 1896; Hornsund Tind ascended, 17 Aug.; arrives at Hammerfest, 18 Aug. 1896; another expedition . . . . . June, 1897

SPITZCAP, see *Majuba*.

SPITZER COLLECTION, formed by Frederick Spitzer, a Jew, consisted chiefly of articles of *vertu* connected with the Middle Ages and Renaissance with some antiques but no paintings. It included metal work, *faïence*, and majolica ware, arms and jewelry. He built an hotel at Paris to receive them, and died in 1890, aged about 75. The collection valued at about 500,000*l.* was sold for about 400,000*l.*, 17 April—17 June, 1893.

SPONTANEOUS COMBUSTION of the human body, declared by most chemists to be impossible, although many cases have been recorded. The case of the countess of Görlitz, 1847, disproved by confession of her murderer, March, 1850.

SPONTANEOUS GENERATION. The origin of the germs of infusorial animalcules developed during putrefaction, &c., has been warmly debated by naturalists. Spallanzani (about 1766), and especially M. Pasteur and others assert that these germs are really endowed with organic life existing in the atmosphere. Needham (about 1747), and especially M. Pouchet and his friends in our day, assert that these germs are spontaneously formed out of organic molecules.—Pouchet's "*Hétérogénie*" appeared in 1859. Bastian's "Beginnings of Life," 1872. The researches of professor Tyndall, supporting Pasteur, and opposing Bastian, were published 1876-8.

"Spontaneous generation" (also termed *generatio æquivoca* and *epigenesis*), has been still further disproved by the laborious microscopic investigations of the Rev. W. H. Dallinger, 1875-8. He found germs to stand a much greater heat than perfect organisms.

SPORTING NEWSPAPERS: Bell's Life in London, began 1820; Sporting Life, 16 March, 1859; Sporting Gazette, 1862; Sporting Times, 1865; Sportsman, Aug. 1865; The Field, 1853; Illustrated Sporting and Dramatic News, 1874; Referee, 1877.

SPORTS. The *first* "Book of Sports," under the title of "The King's Majestie's Declaration to his Subjects concerning Lawful Sports to be used" on Sundays after evening prayers, was published by king James I., 24 May, 1618. The *second* "Book of Sports," with a ratification by his majesty Charles I., is dated 18 Oct. 1633. On the publication of the first "Book of Sports," there arose a long and violent controversy among English divines on certain points; see *Sabbatarians*, *Sunday*, &c.—The book was ordered to be burnt by the hangman, and the sports were suppressed by the parliament. The sportsman's annual exhibition, at the Agricultural Hall, London, began in 1882. The "*Sporting League*" established to maintain British sports in opposition to the Anti-Gambling league, first meeting in London, earl of Coventry in the chair, 19 Dec., 1894. "The Encyclopædia of Sport," edited by the earl of Suffolk and others, Part I. published Feb. 1897. See *Badminton Library*.

SPRINGFIELD (Missouri), near which was fought the desperate battle of Wilson's Creek, in which the federals had the advantage over the confederates, but lost their brave general, Nathaniel Lyon, 10 Aug. 1861.

SPURS. Anciently the difference between the knight and esquire was, that the knight wore gilt spurs (*eques auratus*), and the esquire silver ones. Two sorts of spurs seem to have been in use at the time of the Conquest, one called a pryck, having only a single point, the other a number of points of considerable size. Spurs nearly of the present kind came into use about 1400; see *Plating*.

SPURS, BATTLE OF. Henry VIII. of England, the emperor Maximilian, and the Swiss, in 1513, entered into an offensive alliance against France. Henry VIII. landed at Calais in the month of July, and soon formed an army of 30,000 men. He was joined by the emperor with a good corps of horse and some foot, the emperor as a *mercenary* to the king of England, who allowed him a hundred ducats a day for his table! They invested Teroüenne with an army of 50,000 men; and the duc de Longueville, marching to its relief, was signally defeated on the 16th of August, at Guinegate. This battle was popularly called the battle of *Spurs*, because the French used their *spurs* more than their *swords*. The name was really obtained from the village of Spours near which it was fought. *Lodge*. The English king laid siege to Tournay, which submitted in a few days. *Hénault*. See *Courtrai*, for another "battle of spurs."

STABAT MATER, a Latin hymn, by Jacopone, 14th century, sung during Passion week in Catholic churches. Rossini's music to this hymn (1842) is often performed.

STADE DUES. At a castle near the town of Stade, in Hanover, certain dues on goods were charged by the Hanoverian government. The British government settled these dues in 1844. They were resisted by the Americans in 1855, and were abolished in June, 1861. Great Britain paid 160,000*l.* as her share of the compensation (3,000,000*l.*).

STAGE COACHES, so called from the stages or inns at which the coaches stopped to refresh and change horses. *Bailey*. The stage-coach duty act passed in 1785. These coaches were made subject to salutary provisions for the safety of passengers, in 1810; to mileage duties, 1815. The acts were consolidated in 1832, and amended in 1833 and 1842. See *Mail Coaches*, &c.

STAGYRITE, properly Stagirite, see *Aristotelian*.

STAMFORD BRIDGE (York). In 1066 Tostig, brother of Harold II., rebelled against his brother, and joined the invading army of Harold Hardrada, king of Norway. They defeated the northern earls and took York, but were defeated at Stamford-bridge by Harold, 25 Sept., and were both slain. The loss by this victory no doubt led to his defeat at Hastings, 14 Oct. following. The claim of Mr. William Grey for the *earldom of Stamford*, was granted by the house of Lords, 3 May, 1892.

STAMP-DUTIES. By 22 & 23 Charles II. (1670-1) duties were imposed on certain legal documents. In 1694 a duty was imposed upon paper, vellum, and parchment. The stamp-duty on newspapers was commenced in 1711, and every year added to the list of articles upon which stamp-duty was made payable.

Stamp act, which ordered a stamp to be affixed to all legal documents, in the colonies, and thereby to assist the revenue of Great Britain was passed, 22 March, 1765. It excited great opposition in N. America, with rioting, and consequently was repealed, 21 Feb. 1766. The resistance of the colonists to taxation, without representation in parliament, led to the American war, 1775–83.

STANDARD for gold and silver in England fixed by law, 1300. Standard gold is 22 parts out of 24 of pure gold, the other two parts or carats being silver or copper. The standard of silver is 11 oz. 2 dwts. of fine silver alloyed with 18 dwts. of copper, or 37 parts out of 40 pure silver, and three parts copper. In 1300 these 12 oz. of silver were coined into 20 shillings; in 1412 they were coined into 30 shillings; and in 1527 into 45 shillings. In

* Fee and patent stamps now omitted.

1545 Henry VIII. coined 6 oz. of silver and 6 oz. of alloy into 48 shillings; and the next year he coined 4 oz. of silver and 8 oz. of alloy into the same sum. Elizabeth, in 1560, restored the old standard in 60 shillings; and in 1601 in 62 shillings. The average proportions of silver to gold at the royal mint are $15\frac{1}{2}$ to 1. The standard of plate and silver manufactures was affirmed, 6 Geo. I. 1719 *et seq.*; see *Gold*, *Goldsmiths*, *Silver*, *Coinage*, and *Currency*.

STANDARD, BATTLE OF THE, see *Northallerton*.

STANDARD MEASURES. In the reign of Edgar a law was made to prevent frauds arising from the diversity of measures, and for the establishment of a legal standard measure to be used in every part of his dominions. The standard vessels made by order of the king were deposited in the city of Winchester, and hence originated the well-known term of "Winchester measure" of the time of Henry VII. (1487). The bushel so made is still preserved in the museum of that city. Henry I. also, to prevent frauds in the measurement of cloth, ordered a standard yard of the length of his own arm to be made and deposited at Winchester, with the standard measures of king Edgar. The Guildhall contains the standard measures of succeeding sovereigns. *Camden.* — The standard weights and measures were settled by parliament in 1824. The pound troy was to be 5760 grains, and the pound avoirdupois 7000 grains. The "Standard yard of 1760," in the custody of the clerk of the house of commons, was declared to be the Imperial Standard yard and the unit of measures of extension. This standard having been destroyed by the fire in 1834, a new commission was appointed to reconstruct it, and researches for this purpose, in conformity with the act, which directed the comparison of the standard with a pendulum vibrating seconds of time in the latitude of London, were begun by Francis Baily (died in 1844), continued by the rev. R. Sheepshanks till his death in 1855, and completed by G. B. Airy, astronomer royal. In 1855 was passed "an act for legalising and preserving the lost standards of weights and measures." The parliamentary copies of the standard pound and yard are deposited at the Royal Observatory, Greenwich. The standard weights and measures act was passed Aug. 1866. The Standard Commission published reports, 1866 *et seq.*

The old standard yard and other measures and weights, supposed to have been burnt at the fire of the parliament houses in 1834, were discovered by Mr. Bull's agents in the Journal Office, where they had been deposited and left unnoticed, July, 1891. The rude standards of the reign of Henry VII. and Elizabeth are still in existence.

"STANDARD," conservative newspaper; begun, morning, 1827; evening, 29 June, 1857.

STANDARDS, see *Banners*, *Flags*, &c. The practice in the army of using a cross on standards and shields is due to the asserted miraculous appearance of a cross to Constantine, previously to his battle with Maxentius; Eusebius says that he received this statement from the emperor himself, 312. The standard was named LABARUM. For the celebrated French standard, see *Auriflamme*.— STANDARD OF MAHOMET; on this ensign no infidel dared look. Christians have been massacred by the Turkish populace for looking on it.—The British IMPERIAL STANDARD was first hoisted on the Tower of London, and on Bedford Tower, Dublin, and displayed by the Foot Guards, on the union of the kingdoms, 1 Jan. 1801.

STANFORD COURT, Worcestershire, the ancient mansion of sir Francis Winnington, burnt 5-7 Dec. 1882; valuable portraits, books, MSS. &c., destroyed.

STANHOPE ADMINISTRATION was formed by James (afterwards earl) Stanhope and the earl of Sunderland, 15 April, 1717. Stanhope was premier and chancellor of the exchequer; lord (afterwards earl) Cowper, lord chancellor; earl of Sunderland and Joseph Addison, secretaries of state, &c. In March, 1718, Addison resigned, and the earl of Sunderland became premier.

STANLEY, AND AFRICAN EXHIBITION. Patrons, queen Victoria and the king of the Belgians; Mr. Joseph Thomson, the traveller, chief superintendent, opened at Victoria Gallery, Regent street, 24 March; closed 8 Nov. 1890.

The exhibition included pictures and portraits, African weapons, historical maps, and many interesting objects collected by Livingstone, Grant, Speke, Johnstone, and other travellers.

STANLEY FUND. Mr. Stanley's wish that the surplus of the receipts from the exhibition should form a fund for placing a steamer on the lake Victoria Nyanza (17 May), agreed to at a meeting at the Mansion house, 5 June; 50*l.* given by the queen, 16 July; 2,300*l.* received Oct. 1890.

STANNARY COURTS of Devon and Cornwall for the administration of justice among the tin miners, whose privileges were confirmed by 33 Edw. I. 1305. They were regulated by parliament in 1641, and at many times since. A "Stanneries act" was passed in 1869; another act in 1887. The Stannaries court (abolition) act, passed, 14 Aug. 1896, came into force, 1 Jan. 1897.

STAPLE (literally that which is fixed). The chief English staple commodities which were traded in by privileged merchants, and on which customs were levied, were wool, skins, leather, tin, lead and sometimes cloth, butter, and cheese; certain towns were appointed for the collection of the duties; statutes relating to the staple were passed by Edward III., Richard II., and Henry VI. Edward III.'s "ordinacio stapularum" (ordinance of the staple) was enacted in 1353.

STARCH is a sediment produced at the bottom of vessels wherein wheat has been steeped in water: it is soft and friable, easily broken into powder, and is used to stiffen and clear linen, with blue; its powder is employed to powder the hair. The art of starching linen was brought into England by Mrs. Dinghein, a Flemish woman, 1 Mary, 1553. *Stow.* Patents for obtaining starch from other substances have been taken out: from potatoes by Samuel Newton and others in 1707; from the horse-chestnut by Wm. Murray in 1796; from rice by Thomas Wickham in 1823; from various matters by Orlando Jones in 1839-40.

STAR-CHAMBER, COURT OF. So called haply from its roof being garnished with stars. *Coke.* This court of justice was called Star-Chamber, not from the *stars* on its roof (which were obliterated even before the reign of queen Elizabeth), but from the *Starra*, or Jewish covenants, deposited there by order of Richard I. No *star* was allowed to be valid except found in those repositories, and here they remained till the banishment of the Jews by Edward I. The court was instituted or revived, 3 Hen. VII. 1486, for trials by a committee of the privy council, which was in violation of Magna Charta; as it dealt with civil and criminal causes

unfettered by the rules of law. In Charles I.'s reign it exercised its power upon several bold innovators, who gloried in their sufferings, and contributed to render government odious and contemptible. It was abolished in 1640. There were in this court from 26 to 42 judges, the lord chancellor having the casting voice. The judicial committee of the privy council is the Star-chamber revived under another name.

STAR OF INDIA, a new order of knighthood for India, instituted by letters patent 23 Feb., gazetted 25 June, 1861, and enlarged in 1866. It comprised the sovereign, the grand master, 25 knights (Europeans and natives), and extra or honorary knights, such as the prince consort, the prince of Wales, &c. The queen invested several knights on 1 Nov. 1861. The prince of Wales held a grand chapter at Calcutta, 1 Jan. 1876.

STARS, THE FIXED. They were classed into constellations (*which see*), it is supposed, about 1200 B.C. Hicetas, of Syracuse, taught that the sun and the stars were motionless, and that the earth moved round them, about 344 B.C. (this is mentioned by Cicero, and perhaps gave the first hint of this system to Copernicus). Job, Hesiod, and Homer mention several of the constellations. The Royal Library at Paris contains a Chinese chart of the heavens, made about 600 B.C., in which 1460 stars are correctly inserted. The aberration of the stars was discovered by Dr. Bradley, 1727; see *Astronomy*, and *Solar System*. Maps of the stars were published by the Society for the Diffusion of Useful Knowledge in 1839, and a set of Celestial Maps, issued under the superintendence of the Royal Prussian Academy, was completed in 1859. See *Photometer*.

Tycho Brahe discovered a new star in Cassiopeia in 1572.
Temporary stars were observed in 1876 and 1885.
A list of about 200 stars, which vary in their brightness and sometimes disappear, has been published by Mr. G. F. Chambers in his "Handbook on Astronomy," 1889–90. A variable star, named *α* Ceti, or Mira Ceti, observed by David Fabricius in Aug. 1596, disappeared in Oct. following. It was observed again in 1603 and 1638, and since.

STATE MEDICINE, see under *Sanitation*, 2 May, 1888.

STATE PAPER OFFICE was founded in 1578, now merged into the Public Record Office. In 1856 the British government began the publication of Calendars of State Papers, invaluable to future historians; brought down to William & Mary, 1898.

STATES-GENERAL OF FRANCE. An ancient assembly of France, first met, it is said, in 1302 to consider the exactions of the pope. Previous to the Revolution, it had not met since 1614. The states consisted of three orders, the clergy, nobility, and commons. They were convened by Louis XVI., and assembled at Versailles, 5 May, 1789 (308 ecclesiastics, 285 nobles, and 621 deputies or *tiers état*, third estate). A contest arose whether the three orders should make three distinct houses, or but one assembly. The commons insisted upon the latter, and assuming the title of the National Assembly, declared that they were competent to proceed to business, without the concurrence of the two other orders, if they refused to join them. The nobility and clergy found it expedient to concede the point, and they all met in one hall; see *National Assembly*. Centenary, see *France*, 5 May, 1889.

STATESMAN'S YEAR-BOOK, statistical and historical annual of the states of the world, first published in 1864, edited by Frederick Martin.

STATES OF THE CHURCH, see *Pope*, and *Rome*.

STATIONERS. Books and papers were formerly sold only at stalls; hence the dealers were called stationers. The company of stationers of London is of great antiquity, and existed long before printing was invented, yet it was not incorporated until 3 Philip & Mary, 1557. Their old dwelling was in Paternoster-row.

STATISTICS, the science of the state, political knowledge, is said to have been founded by sir Wm. Petty (1623—1687), in his "Political Arithmetic," published 1691. The term is said to have been invented by professor Achenwall of Göttingen in 1749. The first statistical society in England was formed at Manchester in 1833; the Royal Statistical Society of London, which publishes a quarterly journal, was established 15 March, 1834, for the purpose of procuring, arranging, and publishing "facts calculated to illustrate the condition and prospects of society." Jubilee kept, 22, 23, 24 June, 1885; incorporated, 1887. The gold medal presented to Mr. Robert Giffen (K.C.B. 1895), the able government statistician, 20 Nov. 1894; resigns office 30 Sept. 1897; succeeded by Mr. A. E. Bateman. Similar societies have been established on the continent. International Statistical Institute constituted in 1885, met at Rome, 12-16 April, 1887. International Statistical Congresses are now held occasionally. The first at Brussels, chiefly through the agency of M. Quetelet, in 1853; 2nd at Paris, 1855; 3rd at Vienna, 1857; 4th at London, under the presidency of the prince consort, 16-21 July, 1860; 5th at Berlin; 6th at Florence; 7th at the Hague; 8th at St. Petersburg, was opened 22 Aug. 1872; 9th at Pesth, 31 Aug. 1876 and since; one at Vienna 28 Sept. 1891. The eminent statistician, Dr. Wm. Farr, died 14 April, 1883. *Statistical Abstracts* have been published annually by the government for many years, gives much information respecting the revenue, expenditure, commerce, etc., of the empire for 15 years. Mr. M. G. Mulhall's "Dictionary of Statistics" published 1891.

STATUES, see *Sculpture*, &c. Two statues of Rameses II. and one of his queen (about 1322 B.C.), 10 feet high, discovered at Aboukir by Daninos Pasha, Oct. 1891. Phidias, whose statue of Jupiter passed for one of the wonders of the world, was the greatest statuary among the ancients, 440 B.C. He had previously made a statue of Minerva at the request of Pericles, which was placed in the Parthenon. It was made of ivory and gold, and measured 39 feet in height. Lysippus invented the art of taking likenesses in plaster moulds, from which he afterwards cast models in wax, 326 B.C. Michael Angelo was the greatest artist among the moderns. The first equestrian statue erected in Great Britain was that of Charles I. in 1678.* By 17 & 18 Vict. c. 10 (10 July, 1854), public statues were placed under the control and protection of the Board of Works. STATUTES, see *Acts of Parliament*, *Clarendon*, *Merton*, &c. Statute Law Revision acts were passed in 1863-1894. The subject was referred to a joint committee of both houses, 14 March, 1892. Statute Law Revision and Civil Procedure act, 44 & 45 Vict. c. 59, passed 27 Aug. 1881. "Statutes: Revised Edition: (1325-1878)," in 18 volumes, published 1870-85. The number of volumes since greatly reduced. Select commons' committee on the subject, met 17 July, 1891.

STATUTORY DECLARATIONS. By 5 & 6 Will. IV. c. 62 (1835), persons objecting to oaths are permitted to make declarations before magistrates, judges, &c.; commencing: "I ——, do solemnly and sincerely declare that"—an indulgence sometimes abused.

She withdrew during the examination, and the prosecution ceased: but Chaffers was severely censured by the magistrate, and by the attorney-general in parliament . . . . . March, 1872

STEAM CARRIAGE (for ordinary roads), invented by the earl of Caithness, was said to be successful in 1860. It travels over rough roads at the rate of 8 miles an hour, at a cost of less than 1*d.* per mile. His lordship made a journey of 140 miles in two days; see *Road Steamers*.

STEAM ENGINE* AND NAVIGATION. Hero of Alexandria, in his "Pneumatics," describes various methods of employing steam as a power; and to him is ascribed the Æolopile, which, although a toy, possesses the properties of the steam-engine: he flourished about 284-241 B.C. Roger Bacon appears to have foreseen the application of steam-power; see *Railways*, *Locomotives*, *Road Steamers*, &c.

* This statue is of brass, cast by Le Sueur, in 1633, at the expense of the Howard-Arundel family. During the civil war, the parliament sold it to John River, a brazier, in Holborn, with strict orders to break it to pieces; but he concealed it underground till the Restoration, when it was erected, in 1678, on a pedestal executed by Grinling Gibbons. The first equestrian statue of bronze, founded at one cast, was that of Louis XIV. of France, 1699; it was elevated about 1724.

She was designed by Mr. I. K. Brunel [who died 15 Sept. 1859], and built by Messrs. Scott Russell and Co., at Millwall; launching lasted from 3 Nov. 1857, to 31 Jan. 1858.

The capital subscribed having been all expended, a new company was formed to fit her for sea.

On 7 Sept. 1859, she left her moorings at Deptford for Portland-roads. On the voyage an explosion took place (off Hastings), through some neglect in regard to the casing of one of the funnels, when ten firemen were killed and many persons seriously injured. After repairs she sailed to Holyhead, arriving there 10 Oct.; she endured the storm of 25-26 Oct. well; and proceeded to Southampton for the winter, 4 Nov.

She was fitted up to convey 5000 persons from London to Australia, a distance of 22,500 miles, with accommodation for 800 1st class passengers, 2000 2nd class, and 1200 3rd class. Her able captain (Harrison) was drowned in the Solent 22 Jan. 1860, deeply regretted. She sailed for New York 17 June, under command of captain Vine Hall, and arrived there 28 June. After being exhibited she left New York 16 Aug. and returned to England 26 Aug.

Owing to a lawsuit in April, the ship came into the hands of sheriff's officers; but was released and sailed for New York on 1 May, 1861. On 12 Sept. she suffered much loss through a violent gale.

In 1862 she performed several voyages to and from New York; but in Aug. ran on a rock near Long Island and injured her bottom.

She was repaired and arrived at Liverpool 17 Jan. 1863, and sailed to New York (16-27 May).

She was bought by Glass, Elliot, and Co. in March or April, 1864, and was chartered to convey the Atlantic telegraph cable; sailed from Sheerness 15 July; and returned 19 Aug. 1865; see under *Electric Telegraph*.

She sailed for New York, prepared for 2000 passengers, 26 March, and returned with 191. She was seized by the seamen, claiming their wages, May, 1867; and the case was carried into Chancery in July.

At the meeting of the shareholders 10 Feb. 1868, no dividend was declared.

She conveyed the French Atlantic telegraph cable, successfully laid . . . . . Oct. 1869

STEAM GUN; suggested by Wm. Murdoch, 1803. One patented by Messrs. Perkins, in 1824, was ineffectual.

In Oct. 1870, Mr. H. Bessemer proposed the application of steam power to artillery.

STEAM HAMMER, invented by Mr. James Nasmyth in 1838, and patented by him 18 June, 1842. Its main feature is the absolutely direct manner by which the elastic power of steam is employed to lift up and let fall the mass of iron constituting the hammer, which is attached direct to the end of a piston-rod passing through the bottom of an inverted steam cylinder placed immediately over the anvil.

In 1842, Mr. Nasmyth applied his steam-hammer to driving piles, which has importantly assisted in the execution of great public works. Owing to its vast range of power, forged iron-work can now by its means be executed on a scale, and for a variety of purposes, with an ease and perfection not previously possible. Parts of gigantic marine steam-engines, anchors, and Armstrong guns, as well as the most minute details of machinery, as in Enfield rifles, are executed by the steam-hammer.

A steam-hammer, said to be the then largest in the world, completed at Woolwich: the falling portion weighs 40 tons, and when used with top steam (51 tons) has the force of 91 tons, April, 1874. One at Schneider's works, Creuzot, France; weight between 75 and 80 tons, Dec. 1877.

Mr. Nasmyth, aged 81, died 7 May, 1890. His Autobiography, edited by Dr. S. Smiles, was published in 1883.

STEAM-MAN. A figure constructed to drag a phaeton received this name in New York in March, 1868.

STEAM NAVIGATION, see under *Steam*.

STEAM-PLOUGHS were patented by G. Callaway and R. A. Purkes, 1849; H. Cowing, 1850; and others. John Fowler's of 1854 is much approved.

STEAM-RAM (to be used in naval warfare), was invented by Mr. James Nasmyth in 1836, and communicated to the Admiralty in 1845. Steam-rams built by Mr. James Laird of Birkenhead for the Confederates in N. America, were stopped and eventually bought by the British government, 1864.

STEAM-WHISTLES and **STEAM-TRUMPETS**, used in factories to summon or dismiss workmen, prohibited by an act passed Aug. 1872.

STEARINE (from *stear*, suet), that part of oils and fats which is solid at common temperature. The nature of these substances was first made known by Chevreul, in 1823, who showed that they were compounds of peculiar acids, with a base termed *glycerine;* of these compounds the chief are stearine, margarine, and elaine; see *Candles*.

STEEL, metal, a compound of iron and carbon, exists in nature, and has been fabricated from the earliest times. It was certainly used by the Egyptians, Assyrians, and Greeks. It now largely replaces cast iron in ship building, &c.

Reaumur discovered the direct process of making steel by immersing malleable iron in a bath of cast iron 1722
A manufactory for cast steel is said to have been set up by Benjamin Huntsman at Handsworth, near Sheffield 1740
The manufacture of shear steel began in Sheffield, about 1800
German steel was made at Newcastle previously by Mr. Crawley.
The inventions of Mushat (1800), Lucas (1804), and Heath (1839), were important steps in this manufacture; see *Engraving*.
Reipe patented his "puddled steel" . . . 1850
Mr. (aft. sir) H. Bessemer made steel by passing cold air through liquid iron, 1856. By this method 20 tons of crude iron have been converted into cast steel in 23 minutes.*
Tungsten steel was made in Germany, 1859; and M. Fremy made steel by bringing red-hot iron in contact with carbonate of ammonia 1861
M. Alfred Krupp exhibited an ingot of steel weighing 4500 lbs. in 1851, and one weighing 20 tons in 1862
[about 15,000 men are employed at his works at Essen, 1887]
The subject much investigated by M. Caron, 1861-5; much attention was excited by cutlery made from a metallic sand, brought from Taranaki or New Plymouth, in New Zealand 1860
A steel bridge, in connection with the exhibition, constructed at Paris by M. Joret 1866
Mr. John Heaton published his process . . 1867-8
Dr. Siemens, by means of his "regenerative gas furnaces," produced excellent steel, cheaply, in large masses . . . . . 1876, *et seq.*
Cutlers' Company, London, opened an exhibition, 1 May, 1879
Messrs. Bolckow, Vaughan & Co. of Middlesbrough, by Thomas and Gilchrist's process, convert Cleveland iron ore into Bessemer steel, by lining the furnace with radial bricks of magnesian limestone and adding cold basic material, phosphorus being thereby removed . . . ,,
The process reported successful . . Oct. 1880

Mr. B. H. Thwaite, of Liverpool, and Mr. A. Stewart, of Bradford, introduce an improved "rapid" process for the manufacture of steel, announced Oct. 1887

See under *Steam*.

STEEL PENS. "Iron pens" are mentioned by Chamberlayne in 1685. Steel pens, made long before, began to come into use about 1820, when the first gross of three-slit pens was sold wholesale for 7*l.* 4*s.* In 1830 the price was 8*s.*, and in 1832, 6*s.* A better pen is now sold for 6*d.* a gross. Birmingham in 1858 produced about 1000 million pens per annum. Women and children are principally employed in the manufacture. Perry, Mitchell, and Gillott are eminent makers. Joseph Gillott, originally a mechanic, made a large fortune by steel-pen making. He died 5 Jan. 1872, aged 72.

STEEL-YARD. An ancient instrument, the same that is translated *balance* in the Pentateuch. The *Statera Romana*, or Roman steel-yard, is mentioned in 315 B.C.—The STEEL-YARD or STILLYARD COMPANY, London merchants, who had the steel-yard in Thames-street assigned to them by Henry III., about 1232, were Flemings and Germans, and the only exporters, for many years after,

* For this invention he had received by royalties 1,507,748*l.* up to 1879; also many foreign honours; knighted June, 1879; born 19 Jan. 1813, died 15 March, 1898.

of the staple commodities of England. *Anderson.* The company lost its privileges, finally, in 1578; and the merchants were expelled from England in 1597.

STEENKIRK, see *Enghien.*

STEFANO, SAN, a small village on the sea of Marmora, S.W. of Constantinople; here the grand duke Nicholas established his head quarters, 24 Feb.; and here was signed a treaty of peace with Turkey, 3 March, 1878, much modified by the treaty of Berlin, signed 13 July, following. The Russians quitted San Stefano, 22 Sept. 1878.

It established independence of Montenegro, Servia, and Roumania; constituted Bulgaria a tributary principality; required a heavy indemnity from Turkey for Russia, who was to gain a port on the Black Sea and Kars; to exchange the Dobrudscha for Bessarabia; to obtain rights for Christians; to open the Bosphorus and Dardanelles in peace and war; &c.

STENOCHROMY, see *Printing in Colours.*

STENOGRAPHY (from *stenos*, narrow), the art of short-hand, said to have been practised by the ancients. Its improvement is attributed to the poet Ennius, to Tyro, Cicero's freedman, and still more to Seneca. The *Ars Scribendi Characteris*, written about 1412, is the oldest system extant. Dr. Timothy Bright's "Characterie, or the Arte of Shorte, Swifte, and Secrete Writing," published in 1588, is the first English work on short-hand. Peter Bales, the famous penman, published on stenography in 1590; and John Willis published his "*Stenographie*" in 1602. Since then many systems and modifications have been produced. See *Phonography.*

Edmund Willis's system, 1618; Thomas Shelton's system, 1620 (used by Samuel Pepys); Wm. Cartwright's, 1642–69 (known as Rich's); Wm. Mason's, 1672, improved by Thos. Gurney (1720) (known as Gurney's, officially used in parliament since 1813); John Byrom's, published after his death, 1767; Wm. Mavor's, 1780; Sam Taylor's, on which are based ("Odell's and Harding's") 1786; Rev. Richard Roe's, 1820, first Script system; James H. Lewis's, 1812–15; Isaac Pitman's (phonographic), 1837, see *Phonography;* A. M. Bell's, 1849; Prof. Everett's, 1877; T. Cooper ("Parliamentary shorthand," Gurney's), 1858; E. Pocknell's ("Legible shorthand"), 1880; J. M. Sloan's, 1882; Thomas Anderson's, 1884; "A text-book of the Gurney system," edited by W. B. Gurney and Sons, 18th edition, 1884; J. Barker's, 1885; A. Jane's ("Shorthand without complication"). 1885–92

Various systems are in use, in France, Germany, America, and the East.

Shorthand Society founded 1880

Sig. A. Michela's stenographic machine for the graphic representation of phonetic sounds (about 200 words per minute); like a harmonium with a key-board, exhibited at the Turin exhibition of 1884, successfully adopted by the Italian Senate.

STEPHEN'S CHAPEL, ST. (Westminster), built by king Stephen, about 1135. It was rebuilt by Edward III. in 1347, and by him made a collegiate church, to which a dean and twelve secular priests were appointed. Soon after its surrender to Edward VI., about 1548, it was applied to the use of Parliament; see *Parliament.* It was destroyed by fire, 16 Oct. 1834. The Society of Antiquaries published memorials of it about 1810; and Mr. Mackenzie's work appeared in 1844. The restoration of the beautiful crypt was complete in Jan. 1870.

STEPNEY, a parish, E. London, the Stebenhide of Domesday book. Edward I. summoned a parliament here, 1299. Stepney suffered severely by the plague, 1625 and 1665. Stepney-green was restored and opened as a park by the Metropolitan Board of Works, Aug. 1872. Population, 1881, 58,543; 1891, 57,599.

STEREOCHEMISTRY, the chemistry of atoms, carbon, &c., in space, connected with the researches of M. Pasteur and his colleagues, Van't Hoff and Le Bel; was so named about 1890 by Victor Meyer. Van't Hoff's "Chemistry in Space," translated by J. E. Marsh. "Handbuch der Stereochemie," by Dr. C. A. Bischoff and Dr. Paul Walden, published 1893.

STEREOCHROMY, a mode of painting in which water-glass (an alkaline solution of flint, silex) serves as the connecting medium between the colour and the substratum. Its invention is ascribed to Von Fuchs, who died at Munich on 5 March, 1856. Fine specimens of this art by Kaulbach and Echter exist in the Museum at Berlin, and also at Munich.

STEREOMETER, by which is compassed the art of taking the contents of vessels of liquids by gauging, invented about 1350. *Anderson.* M. Say's stereometer, for determining the specific gravity of liquids, porous bodies and powders as well as solids, was described in 1797.

STEREOSCOPE (from *stereos*, solid, and *skopein*, to see), an optical instrument for representing in apparent relief natural objects, &c., by uniting into one image two plane representations of these objects as seen by each eye separately. The first stereoscope by reflection was constructed and exhibited by professor Charles Wheatstone in 1838, who had announced its principle in 1833. Since 1854 stereoscopes have been greatly improved. By Mr. John Anderton's lantern stereoscope, remarkable effects were exhibited on a screen in the Royal Society's lecture room, 7 June, 1893.

STEREOTYPE, a cast from a page of movable printing-types, so named by the Parisian printer, Didot, 1798. It is said that stereotyping was known in 1711. It was practised by Wm. Ged of Edinburgh, about 1730. Some of Ged's plates are at the Royal Institution, London. A Mr. James attempted to introduce Ged's process in London, but failed, about 1735.* *Nichols.* Stereotype printing was in use in Holland, in the last century; and a quarto Bible and a Dutch folio Bible were printed there. *Phillips.* It was revived in London by Wilson in 1804. Since 1850 the durability of stereotypes has been greatly increased by electrotyping them with copper or silver. Stereotyping used for printing the *Times*, 1856, *et seq.*

In the library of the Royal Institution is an edition of Sallust, with this imprint: "Edinburgi, Gulielmus Ged, auri faber Edinensis, non typis mobilibus, ut vulgo fieri solet, sed tabellis seu laminis fusis, excudebat. 1744." (Printed at Edinburgh by William Ged of Edinburgh, goldsmith, not with moveable types, as is commonly done, but with cast tablets or plates.)

STERLING (money). Ducange says (1733), "Esterlingus, sterlingus, are English words relating to money, and hence familiar to other

* It was hotly opposed by the journeymen printers.

nations, and applied to the weight, quality, and kind of money." "Denarius Angliæ, qui vocatur sterlingus," stat. Edw. I. (The penny of England, which is called sterling.) Camden derives the word from *easterling* or *esterling*, observing that the money brought from Germany, in the reign of Richard I., was the most esteemed on account of its purity, being called in old deeds "*nummi easterlingi.*" Others derive the word from the Easterlings, the first moneyers in England.

STETHOSCOPE. In 1816 Laënnec, of Paris, by rolling a quire of paper into a kind of cylinder, and applying one end to the patient's chest and the other to his own ear, perceived the action of the heart in a much more distinct manner than by the immediate application of the ear. This led to his inventing the stethoscope, or "breast-explorer," the principle of which, now termed "auscultation," was known by Hippocrates (357 B.C.), and by Robert Hooke, 1681. See *Water*, 1895.

STETTIN (Pomerania), an ancient city, formerly held by the Sidini and Venedes, was taken by Boleslas of Poland in 1121. After being conquered by the Swedes, Russians, and French, it was awarded to Prussia in 1814. Population, 1890, 116,239.

Visited by emperor William during military manœuvres, 12 Sept. 1887.

STEWARD OF ENGLAND, LORD HIGH. The first grand officer of the crown. This office was established prior to the reign of Edward the Confessor, and was formerly annexed to the lordship of Hinckley, Leicestershire, belonging to the family of Montfort, earls of Leicester, who were, in right thereof, lord high stewards of England; but Simon de Montfort, the last earl of this family, having raised a rebellion against his sovereign, Henry III., was attainted, and his estate forfeited to the king, who abolished the office, 1265. It is now revived only *pro hâc vice*, at a coronation, or the trial of a peer. The first afterwards appointed was Thomas, second son of Henry IV. The first for the trial of a peer was Edward, earl of Devon, on the arraignment of the earl of Huntingdon, in 1400. The last was lord Denman at the trial of the earl of Cardigan, 16 Feb. 1841. The duke of Hamilton was lord high steward at the coronations of William IV. 1831, and Victoria, 1838.

STEWARD OF THE HOUSEHOLD, LORD (an ancient office), has the sole direction of the king's house below-stairs; he has no formal grant of his office, but receives his charge from the sovereign in person, who, delivering to him a white wand, the symbol of his office, says, "*Seneschal, tenez le bâton de notre maison.*" This officer has been called lord steward since 1540; previously to the 31st of Henry VIII. he was styled grand master of the household. His function as a judge was abolished in 1849.

STEWART, see *Stuart*.

STOCKINGS of silk are said to have been first worn by Henry II. of France, 1547. In 1560 queen Elizabeth was presented with a pair of knit black silk stockings, by her silk-woman, Mrs. Montague, and she never wore cloth ones any more. *Howell.* He adds, "Henry VIII. wore ordinary cloth hose, except there came from Spain, by great chance, a pair of silk stockings; for Spain very early abounded with silk." Edward VI. was presented with a pair of Spanish silk stockings by his merchant, sir Thomas Gresham; and the present was then much taken notice of. *Idem.* Others relate that William Rider, a London apprentice, seeing at the house of an Italian merchant a pair of knit worsted stockings from Mantua, made a pair like them, the first made in England, which he presented to the earl of Pembroke, 1564. *Stow.* The art of weaving stockings in a *frame* was invented in England by the rev. Mr. Lee, of Cambridge, in 1589, twenty-five years after he had learnt to knit them with wires or needles. Cotton stockings were first made in 1730; see *Cotton*. *Digitated stockings* (like gloves), introduced 1882.

STOCKPORT (in Cheshire) has become eminent on account of the cotton trade. Heaton Norris, in Lancashire, is united to it by a bridge over the river. Here the Manchester blanketeers were dispersed, 11 March, 1817; and here was a serious religious riot, when two Roman catholic chapels were destroyed, and the houses of many Roman catholics gutted, and their furniture and other contents smashed or burnt, 29 June, 1852.

STOICS, disciples of Zeno, the philosopher (about 290 B.C.); obtained the name because they listened to his instructions in a porch (Greek, *stoa*) at Athens. Zeno taught, that man's supreme happiness consisted in living agreeably to nature and reason, and that God was the soul of the world. *Stanley.*

STOKE, EAST (near Newark, Nottinghamshire). Near here, on 16 June, 1487, the adherents of Lambert Simnel, who personated Edward, earl of Warwick, and claimed the crown, were defeated by Henry VII. John de la Pole, the earl of Lincoln, and most of the leaders, were slain. Simnel was afterwards employed in the king's household.

STONE. Stone buildings erected in England by Benedict Biscop about 670. A stone bridge built at Bow, in the 11th or 12th centuries, is accounted the first; but a bridge exists at Crowland, which is said to have been built in 860; see *Bridges*. The first

stone building in Ireland was probably a round tower; see *Building*. Stone china-ware was made by Wedgwood in 1762. *Artificial stone* for statues was manufactured by a Neapolitan, and introduced into England, 1776. Stone paper was made in 1776; see *Ransome's Artificial Stone*, and *Lithotomy*. For stone implements, see *Flints*, and *Piano-forte*. An orchestra composed of wind instruments made of terra-cotta appeared in London in 1874.

STONEHENGE (on Salisbury Plain, Wiltshire) is said to have been erected on the counsel of Merlin, by Aurelius Ambrosius, in memory of 460 Britons, who were murdered by Hengist the Saxon about 450. *Geoffrey of Monmouth*. Erected as a sepulchral monument of Ambrosius, 500. *Polydore Vergil*. An ancient temple of the Britons, in which the Druids officiated. *Dr. Stukeley*. The Britons are said to have held annual meetings at Abury and Stonehenge, when laws were made and justice administered. The cursus near Stonehenge was discovered by Dr. Stukeley, 6 Aug. 1723. The origin and object of these remains are still very obscure. See W. M. Flinders Petrie's "Stonehenge: Plans, Description, and Theories." 1880.

The thorough preservation of Stonehenge strongly advocated Aug. 1886.

STONYHURST COLLEGE, N.E. Lancashire. This institution for the education of Roman Catholics was begun by the arrival in 1794 of 18 Jesuit fathers, with their pupils, of the seminary of St. Omer (*which see*), by invitation of Mr. Thos. Weld of Lulworth, himself formerly a pupil. At first they were placed in an old mansion here. The undertaking prospered, and during this century the present spacious buildings were erected, including a chapel, library, museum, and observatory. In 1892 there were 300 pupils and 30 masters. In 1840 the college was affiliated to the University of London.

The chief of the observatory, Father Stephen Joseph Perry, F.R.S., at Kerguelen, an isle in the S. Indian Ocean, observed the transit of Venus, 8 Dec. 1874. He died at Salut island, near Demerara, where he had gone to observe the eclipse of the sun . . . . 22 Dec. 1889

STORTHING, the Norwegian parliament, said to have been first held at Bergen by Haco V. in 1223.

STOVES. The ancients used stoves which concealed the fire, as the German stoves yet do. They lighted the fire also in a large tube in the middle of the room, the roof being open. Apartments were warmed by portable braziers. Stoves on this old principle, improved, continue in use in many houses and public establishments in England, and generally on the continent. Dr. Franklin and count Rumford (who invented a stove) pointed out the waste of fuel in our open fires; and Dr. Neil Arnott patented his "improvements in the production and agency of heat," 14 Nov. 1821. Dr. C. William Siemens described his smokeless stove in "*Nature*" for 11 Nov. 1880. See *Chimneys*, and *Cottager's Stove*.

Mr. T. Pridgin Teale publishes his inventions, in which he revives the principles of count Rumford with additions, 1883–6.

SUGAR* (*Saccharum officinarum*) is supposed to have been known to the ancient Jews. Found in the East Indies by Nearchus, admiral of Alexander, 325 B.C.—*Strabo*. An oriental nation in alliance with Pompey used the juice of the cane as a common beverage.—*Lucan*. It was prescribed as a medicine by Galen, 2nd century. Brought into Europe from Asia, A.D. 625;—in large quantities, 1150. Attempted to be cultivated in Italy; not succeeding, the Portuguese and Spaniards carried it to America about 1510.

The sugar-cane transported from Syria to Cyprus about 1148; from Madeira about 1420; and to the West Indies . . . . . about 1506
It is not known at what date sugar was introduced into England, but it seems to have been prior to the reign of Henry VIII. Mr. Whittaker, in the History of Whalley, p. 109, quotes an instance in 1497

Sugar-refining was made known to Europeans by a Venetian, 1503, and was first practised in England in 1659, though some say we had the art a few years earlier. The invaluable vacuum-pan was invented by Howard, 1812. Dr. Scoffern's processes were patented in 1848-50, but not adopted in Britain.

He succeeded in organizing the New York Electric Sugar Refining company to carry out the invention; the scheme collapsed and occasioned much loss in America and England by credulous persons, the whole affair being an imposture 1888

SUICIDE (from *sui*, self; *cædere*, to kill), the slayer of himself. The first instances recorded in

* Sugar, long considered a neutral substance, without congeners, has of late years become the head of a numerous family, viz.: Cane-sugar (*sucrose*, from the sugar-cane; boiled with dilute acids it becomes *glucose*) Fruit-sugar (from many recent fruits); Grape-sugar (*glucose*, from dried fruits and altered starch); sugar of milk; *Melitose* (from eucalyptus, by Berthelot in 1856); *sorbin* (from the berries of the mountain ash, by Pelouze); *inosite* (from muscular tissue, Scherer); *dulcose* (by Laurent); *mannite* (from manna, obtained from the fraxinus ornus, a kind of ash); *quercite* (from acorns); to these have been added *mycose*, by M. Mitscherlich, and *melezitose* and *trehalose*, by M. Berthelot.

Jewish history are those of Samson, about 1120, and Saul, 1055 B.C. The Greek and Roman philosophers deemed it a crime, and burned the offending hand apart from the rest of the body. In the reign of Tarquin I., the Roman soldiers, thinking themselves disgraced by being ordered to make common sewers, destroyed themselves, 606 B.C. Cato committed suicide, 46 B.C.* In the Roman catholic church, in the 6th century it was ordained that no commemoration should be made in the Eucharist for such as committed self-murder. This ecclesiastical law continued till the Reformation, when it was admitted into the statute law of England by the authority of parliament, with the confiscation of land and goods. Till 1823 the body of the suicide was directed to be buried in a cross-road, and a stake to be driven through it. A new act, suppressing the barbarous customs, was passed in 1882. It is now usually buried in consecrated ground without a religious ceremony. Thomas Cooper, the eminent Chartist, author of "The Purgatory of Suicides," an epic poem, published in 1845, died, aged 87, 15 July, 1892. Dr. Henry Morselli published "Suicides: an Essay," 1881. There were 7,572 suicides in France in 1887.

* Three instances of self-destruction by fire: the philosopher Empedocles threw himself into the crater of Mount Etna; a Frenchman threw himself, in 1820, into the crater of Vesuvius; and an Englishman, who jumped into the furnace of a forge about the year 1811. Plutarch relates that an unaccountable passion for suicide seized the Milesian virgins, from which they could not be prevented by the tears and prayers of their friends; but a decree being issued that the body of every young maid who did self-murder should be drawn naked through the streets, a stop was soon put to the extraordinary frenzy.

SUITORS' FUND (in the court of chancery) in 1862 amounted to 1,290,000*l.* As this money has no specific owner, a proposal was made by government to apply it to the building of new law-courts, payment of all legal claims being guaranteed, which was directed by the "Courts of Laws Fees" act, passed 20 Aug. 1867.

SULPHUR has been known from the earliest times. Basil Valentine mentions its production from green vitriol. Sulphuric acid (vitriol), produced by him from burning sulphur, was introduced into England about 1720. Sulphur has been the object of research of many eminent chemists during the present century, and many discoveries have been made, such as its allotropic condition, &c. It is the inflammable constituent in gunpowder, and a deleterious ingredient in coal gas. The sulphur mines of Sicily have been wrought since the 16th century, but the exportation was inconsiderable till about 1820; in 1838 the trade increased so much that Great Britain alone imported 38,654 tons. In that year the Neapolitan government was induced to grant a monopoly of the trade to a French company; but a firm remonstrance from the British government led to a discontinuance of this impolitic restriction in 1841, which, however, gave a great and lasting impetus to the British sulphur manufacture.

SUMATRA, an island in the Indian ocean, called Java Minor by Marco Polo, and visited by Nicolo di Conti prior to 1449. Mainly on account of the pepper trade, the Dutch formed a settlement at Padang about 1649, and the British at Bencoolen about 1685. The Dutch possessions with Java were acquired by the British in 1811; but were restored in 1816. In 1824 the Dutch acquired all the British settlements in Sumatra, in exchange for Malacca and some possessions in India. Restrictions on their progress in Sumatra were removed by treaty Feb. 1872. Severe fighting between the Dutch and the Achinese natives with varying results, mostly in favour of the Dutch, April 1873 to 1879. Dutch successful in war, peace announced, Aug. 1879. New war; great victory of the Dutch, 13 Sept. 1882. Sumatra suffered much by the volcanic eruptions and earthquakes of 26-27 Aug. 1883. See *Java*.

SUMPTUARY LAWS restrain excess in dress, furniture, eating, &c. The laws of Lycurgus were severe against luxury, probably 9th century B.C. Those of Zaleucus ordained that no sober woman should go attended by more than one maid in the street, or wear gold or embroidered apparel, 450 B.C. —*Diog. Laert.* The *Lex Orchia* among the Romans (181 B.C.) limited the guests at feasts, and the number and quality of the dishes at an entertain-

ment; and it also enforced that during supper, which was the chief meal among the Romans, the doors of every house should be left open. The English sumptuary laws, chiefly of the reigns of Edward III. and Henry VIII., were repealed in 1856; see *Dress*.

SUN.* Pythagoras taught that the sun was one of the twelve spheres, about 529 B.C. The relative distances of the sun and moon were first calculated geometrically by Aristarchus, who also maintained the stability of the sun, about 280 B.C. Numerous theories were ventured during fifteen centuries, and astronomy lay neglected till about A.D. 1200, when it was brought into Europe by the Moors of Barbary and Spain. The Copernican system was made known in 1530; see *Copernican System*, and *Solar System*. Galileo and Newton maintained that the sun was an igneous globe. The transit of Mercury was observed by Gassendi, 1631. For recent discoveries, see *Eclipses*, *Spectrum*, and *Venus*.

By the observations of Dr. Halley on the spot which darkened the sun's disc in July and August, 1676, he established the certainty of its motion round its own axis.

SUNDAY was the day on which, anciently, divine adoration was paid to the Sun. Among Christians it is commonly called *Dies Dominica*, or Lord's day, on account of our Saviour's appearance on that day, after his resurrection. The first civil law that was issued for the observance of this day, combined it with that of the seventh-day Sabbath and other festivals (*Eusebius*, *Life of Constantine*), and it was followed by several imperial edicts, in favour of this day, which are extant in the body of Roman law, the earliest being that of Constantine the Great, dated 7 March, 321. SUNDAY SCHOOLS. Cardinal Sr. Charles Borromeo introduced Sunday instruction of children at Milan, about 1580; in the next century his example was followed in England by the rev. Joseph Alleine; by rev David Blair, at Brechin, about 1760; by the rev. Theophilus Lindsey, at Catterick, Yorkshire, about 1763; and more especially organised by Robert Raikes, an eminent printer of Gloucester, conjointly with rev. Thos. Stock, 1780. SUPREMACY over the church was claimed by pope Gelasius I. as bishop of Rome, 494. On 15 Jan. 1535, Henry VIII. by virtue of the act 26 Hen. VIII. c. 1, formally assumed the style of "on earth supreme head of the church of England," which was retained by Edward VI., Mary I. (for a time), but was refused by Elizabeth, and has never been revived by succeeding sovereigns. The bishop of Rochester (Fisher) and the ex-lord chancellor (sir Thomas More) and many others were beheaded for denying the king's supremacy in 1535; and in 1578, John Nelson, a priest, and Thomas Sherwood, a young layman, were executed at Tyburn for the same offence. The "act of Supremacy," repealed by 1 & 2 Phil. and Mary, c. 8 (1554), was re-enacted 1 Eliz. c. 1 (1559).

SUPREME COURT OF JUDICATURE was constituted by the Judicature Act 36 & 37 Vict. c. 66, passed 5 Aug. 1873, to come into operation 1 Nov. 1874. In 1874 this was deferred to 1 Nov. 1875. The "Council of Judges" appointed by this act met to consider questions relating to the reform of the law, 18 Jan. 1892. See under *Judges*.

The existing courts were to be united into one Supreme Court, divided into the High Court of Justice and the Court of Appeal. The High Court to consist of the lord chancellor, the two lord chief justices, the vice-chancellors, and the other judges: (hereafter the court to consist of 21 judges.)
Five divisions: 1. Chancery, 2. Queen's Bench, 3. Common Pleas, 4. Exchequer, and 5. Probate, Divorce, and Admiralty; subject to alteration.
The Court of Appeal to consist of five ex-officio judges (viz., lord chancellor, two lord chief justices, lord chief baron, master of the rolls), and such others as may be appointed (§§ 20, 21, 22).
Appeals to the house of lords or the judicial committee of the privy council to be discontinued.
Law and equity to be concurrently administered; law terms abolished; and sittings in vacation provided for. See under *Terms*.
The act passed 11 Aug., 1875, suspended §§ 20, 21, and 55, converted the proposed court of appeal into an intermediate court till 1 Nov., 1876. (See below.)

have been lawyers. Act to come into operation . . . . . 1 Nov. 1876
The court may sit during prorogation of parliament.
The statute relating to the judicial committee of the privy council and to the intermediate court of appeal is amended 1876

At a meeting of the judges it was resolved to recommend the abolition of the exchequer and common pleas, and their consolidation into one, termed the "queen's bench division," under the lord chief justice of England, 30 Nov.; order in council 16 Dec. 1880
Carried into effect; old divisions at an end; judicature act carried out for the first time 7 March, 1881

SURAT (E. Indies). Before the English East India company obtained possession of Bombay, the presidency of their affairs on the coast of Malabar was at Surat; and they had a factory here established under captain Best in 1611. The Great Mogul had here an officer who was styled his admiral. An attack of the Mahratta chief Sivajee, on the British factory, was defeated by sir George Oxenden, 1664. The English were again attacked in 1670 and 1702, and often subsequently. The East India company, in 1759, fitted out an armament, which dispossessed the admiral of the castle; and, soon after, the possession of this castle was confirmed to them by the court of Delhi. Surat was vested in the British in 1800 and 1803. A fourth part of Surat was destroyed by fire 6, 7 April, 1889.

SURGEONS. Barbers and surgeons were united in one company in 1540; but it was enacted that "no person using any shaving or barbery in London shall occupy any surgery, letting of blood, or other matter excepting only the drawing of teeth." In 1745 the surgeons and barbers of London were made distinct corporations. The college of surgeons obtained charters in 1745, 1800, and 1843 (when it was styled the "Royal College of Surgeons of England"), 1852, and 1859. Since that period, various legislative and other important regulations have been adopted to promote their utility and respectability; and no person is legally entitled to practise as a surgeon in the cities of London and Westminster, or within seven miles of the former, who has not been examined at this college. The college in Lincoln's-inn-fields was re-modelled in 1836, and the interior completed in 1837. The premises were enlarged in 1852-3. The museum began with the Hunterian collection, 1800; and the library was founded in 1801. Death of the president, Mr. J. W. Hulke, 19 Feb. 1895. Mrs. Mary Emily Dowson, the first lady surgeon duly qualified to act, was invested with the letters testimonial of the Irish college of surgeons, June, 1886. See *Anatomy*, *Physic*, and *Medical Council.*

SURGERY. It was not until the age of Hippocrates that diseases were made a separate study from philosophy, &c., about 410 B.C. Hippocrates mentions the *ambe*, the ancient instrument with which they reduced dislocated bones. Celsus flourished about A.D. 17; Galen, 170; Aëtius, 500; Paulus Ægineta, in 640. The Arabians revived surgery about 900; and in the 16th century a new era in the science began; between these periods surgery was confined to ignorant priests and barbers. Anatomy was cultivated under Vesalius, the father of modern surgery, in 1538. Surgeons and doctors were exempted from bearing arms or serving on juries, 1513, at which period there were only 13 in London; see *Physic* and *Photography*, 1896. For antiseptic treatment see *Germ Theory.* Great improvements in surgery in the 19th century reported by sir Joseph Lister in his address to the British association at Liverpool, 16 Sept. 1896.

SURGICAL AID SOCIETY, founded 1862; supplies the poor with instruments, waterbeds, &c.

SURINAM (Dutch Guiana), discovered by Columbus, 1498. The factories established by the English in 1640 were occupied by the Portuguese, 1643; by the Dutch, 1654; taken by the British, 1799, 1804; and restored to the Dutch, 1802, 1814.

SURNAMES were introduced into England by the Normans, and were adopted by the nobility about 1100. The old Normans used *Fitz*, which signifies son, as Fitz-herbert. The Irish used O, for grandson, O'Neal, O'Donnell. The Scottish Highlanders used Mac, as Macdonald, son of Donald. The Welsh used Ap, as Ap Rhys, the son of Rhys; Ap Richard. The prefix Ap eventually was combined with the name of the father, hence Prys, Pritchard, &c. The northern nations added the word son to the father's name, as Williamson, Many of the most common surnames, such as Johnson, Wilson, Dyson, Nicholson, &c., were taken by Brabanters and other Flemings, who were naturalised in the reign of Henry VI., 1435. M. A. Lower's "Dictionary of English Surnames" was published in 1860.

SURPLICES were first worn by the Jewish priests, and are said to have been first used in

churches in the fourth century, and encouraged by pope Adrian, 786. "Every minister saying public prayers shall wear a comely surplice with sleeves," *Canon* 58. The garb prescribed by stat. 2 Edw. VI. 1547; again 1 Eliz. 1558; and 13 & 14 Chas. II. 1662; see *Ritualism*.

SURREY CHAPEL, Blackfriars-road, was built for Calvinistic dissenters in 1783; the rev. Rowland Hill, their minister, who died in 1833, was buried in a vault here. The congregation under the rev. Newman Hall removed to Christ Church, in Westminster-road, July, 1876. See *Lincoln Tower*.

SURREY HOUSE MUSEUM, Forest Hill, containing the collections of Mr. F. Horniman, cost about 100,000*l*., presented by him to the public, was opened by sir Morell Mackenzie, 24 Dec. 1890.

SURREY ZOOLOGICAL GARDENS (near London) were established in 1831, by Mr. Edward Cross, who brought hither the menagerie formerly at Exeter change. Various picture models have been exhibited here since 1837, viz., Vesuvius, Iceland, &c., accompanied by fireworks. In 1856, a company which had taken the gardens, erected a large yet elegant building for concerts; the architect being Mr. Horace Jones. On 19 Oct. 1856, when the hall contained about 9000 persons, attending to hear the rev. C. H. Spurgeon, seven were killed and thirty seriously injured, by a false alarm of fire. It was burnt 11 June, 1861; see *Fires*. In 1862 the hall was temporarily taken for the reception of the patients of St. Thomas's hospital.

SUSPENDING POWER, see *Dispensing Power*.

SUSPENSION BRIDGES are ancient in China. The Hungerford (or Charing-cross) suspension bridge, opened May 1, 1845, was removed to Clifton and opened there, 8 Dec. 1864. Parliament empowered the commissioners of woods to erect (among other improvements there) a suspension bridge at Battersea, Sept. 1846; and many bridges of similar construction have been erected in various parts of the kingdom. Lambeth and Westminster suspension bridge was opened 10 Nov. 1862; see *Menai Strait*, *Hungerford*, *Clifton*, &c.

SUSPENSORY BILL, the name given to "a bill to prevent for a limited time [to 1 Aug. 1869] new appointments in the church of Ireland; and to restrain, for the same period, in certain respects, the proceedings of the Ecclesiastical Commissioners for Ireland." This bill was introduced into the commons by Mr. Gladstone, 14 May, and passed through committee, 5 June; rejected by the lords (192 to 97), 30 June, 3 A.M., 1868. A similar bill, with limitations relating to Wales and Monmouthshire, introduced by Mr. Asquith, read first time (301 to 245), 23 Feb. 1893; withdrawn, Sept., 1893; see *Church of England*, May, 1893.

SUTLEJ, a river in N.W. India, the ancient Hyphasis or Hypana, on the banks of which were fought the desperate battles of Aliwal, 28 Jan., and Sobraon, 10 Feb. 1846 (*which see*).

SUTTEE, the burning of widows. This custom began in India from one of the wives of "Bramah, the Son of God," sacrificing herself at his death, that she might attend him in heaven. Seventeen widows have burnt themselves on the funeral pile of a rajah; and in Bengal alone, 700 have thus perished in a year. The English government, after long discouraging suttees, by the agency of lord William Bentinck, formally abolished them, 7 Dec. 1829; but they have since occasionally taken place. The wife of the son of the rajah of Beygoon thus perished, June, 1864, and several wives of sir Jung Bahadoor, minister of Nepaul, 1 March, 1877. Suttees still occur; one, voluntary, at Poona, Nov. 1890.

About 20,000,000 women in enforced widowhood; much profligacy, 1885. Legislative interference with the Hindoo marriage laws declared by lord Dufferin, viceroy, to be ineffectual and unnecessary; moral influence progressing (see Brahmo Somaj, under *Deism*) announced Oct. 886

SWABIA, a province in S. Germany; was conquered by Clovis, and incorporated into the kingdom of the Franks, 496. After various changes of rulers, it was made a duchy by the emperor Conrad I., in 912, for Erchanger; according to some, in 916, for Burckhardt. The duchy became hereditary in the house of Hohenstaufen in 1080. Duke Frederick III. became emperor of Rome, commonly styled of Germany, as Frederick I. (usually styled Barbarossa, red beard), in 1152. Conradin his descendant, was defeated at the battle of Tagliacozzo (*which see*), in 1268, and beheaded shortly after. The breaking up of the duchy gave rise to many of the small German states; part of Swabia is included in Würtemberg and Switzerland. Swabia was made a circle of the empire in 1387 and 1500. A league, composed of Swabian cities and states, about 1254, was the germ of the great Swabian league, formed for the preservation of the peace of Germany, under the auspices of the emperor Frederick, in 1488.

On 6 Aug. 1855, the English and French fleet anchored off Sweaborg, and bombarded it by mortar and gun-boats from the 9th to the 11th, causing the destruction of nearly all the principal buildings, including the dockyard and arsenal. SWEATING SICKNESS, see *Plague.*

SWEATING SYSTEM, a term applied, especially in the east end of London, to the practice carried on by large tradesmen of entrusting orders to middlemen termed "sweaters," who employ men, women, and children (principally foreigners) to make up clothes, boots, and furniture in their own houses at excessively low wages with many evil consequences. Lord Dunraven's motion for a select committee of inquiry was carried in the lords, 28 Feb.; archbishop of Canterbury, earl of Derby, and others appointed 9 March, 1888. Painfully distressing evidence was obtained. The origin of the evil is attributed to the great competition in producing extreme cheapness. The new and foreign workmen are termed "greeners." It is stated that about 5*s.* are sometimes paid for a week of days of 14 hours, May. The sufferings of the Cradley Heath chain-makers, nailmakers, and others, were disclosed to the committee . . . . SWEDEN (N. Europe). The ancient inhabitants were the Fins, now the modern inhabitants of Finland, who retired to their present territory on the appearance of the Scandinavians or Goths, who have ever since been masters of Sweden; see *Scandinavia*, and *Norway*, 1891. The internal state of this kingdom is little known previous to the 11th century. By the union of Calmar in 1397, Sweden became a province of Denmark, and was not wholly rescued from this subjection till 1521, when Gustavus Vasa recovered the kingdom from the Danish yoke. He became king in 1523, and his descendants ruled till 1809. The government of Sweden is a limited monarchy. The diet consists of four orders, the nobles, the clergy, the peasants, and the burghers, and meet every three years. The king is, as in Britain, the head of the executive. There are two universities, Upsal and Lund; and Sweden can boast, among its great men, Linnæus, Celsius, Scheele, Bergman, Berzelius, Thorwaldsen, and Andersen. Population (31 Dec. 1887) of Sweden, 4,734,901; of Norway (1875), 1,806,900. Sweden, 1890, 4,784,675. Norway, 1891, 1,988,997. SWEDENBORGIANS, or New Jerusalem Church, are those who adopt the theological teachings of Emanuel Swedenborg (born at Stockholm, 29 Jan. 1688 ; died in London, 29 March, 1772). He claimed to have had his spiritual sight opened, and to have been introduced into heaven and hell by the Lord that he might disclose their true nature and the science of correspondences by which the internal sense of Scripture, which is the Word as it exists in the heavens, may be known to men : this he did in the *Arcana Cœlestia* and other works.

His disciples first meet as an organized body in London in 1788.

There were 70 churches in Great Britain in 1879.

Their belief is that the sole deity is centred in Jesus Christ, in whom is a trinity of essentials ; that salvation is effected by faith and works combined ; that as man's soul is a spiritual body he will never resume the material body ; that the Last Judgment was effected in the spiritual world during Swedenborg's lifetime ; and that the Lord's Second Coming has taken place through the revelation of a new system of truth from the inner sense of Scripture.

SWITZERLAND was in ancient times inhabited by the Helvetii, *which see.* The country was colonised by the Romans after Cæsar's victory over the Helvetii in their invasion of Gaul, 58 B.C., and the people were gradually combined with the Romans, and partook of the fortunes of their empire. Whitefield's Tabernacle in Tottenham-court-road was erected in 1756, and enlarged in 1760. His lease expired in 1828; the chapel was opened by the Independents in 1830, and taken down in 1890. A large metropolitan tabernacle, erected for the ministrations of Mr. C. H. Spurgeon, a Baptist, Kennington-road, was opened on 31 March, 1861; burnt down, 20 April, 1898.

After a conflict on the 27th, both armies remained on the field during the night, and the French at break of day renewed the attack, and were again repulsed by the British with great slaughter. At noon Victor charged the whole British line, was repulsed at all points, and retreated with a heavy loss. As Soult, Ney, and Mortier were in the rear, the British retired after the victory.

TALLY OFFICE in the Exchequer took its name from the French word *tailler*, to cut. A tally is a piece of wood written upon both sides, containing an acquittance for money received; which, being cloven asunder by an officer of the exchequer, one part, called the stock, was delivered to the person who paid, or lent, money to the government; and the other part, called the counter-stock, or counter-foil, remained in the office, to be kept till called for, and joined with the stock. This manner of striking tallies is very ancient.—*Beatson.* The practice was ordered to be discontinued in 1782. See *Exchequer.* On 16 Oct. 1834, the houses of parliament were burnt down by too many of these tallies being used in heating the stoves in the house of lords.

TALMUD (from *lamad*, to teach), the compendium of ancient Jewish oral or unwritten law, as distinguished from the Pentateuch, or written law; its origin is coeval with the return from the Babylonish captivity, 536 B.C. Its compilation in Hebrew was begun by the Scribes, and by their successors the work was carried on till 220 B.C. It is composed in prose and poetry, and contains two elements, legal and legendary. The morality resembles that of the New Testament, and the philosophy is rather Platonic than Aristotelian.

The Mischna, comprising the work of the rabbis, termed Thanaïm, was compiled by Jehuda Hanassi, in the middle of the second century, A.D., and forms the Jerusalem Talmud, written at Tiberias, in Palestine, about 230. The Babylonian Talmud contains also the Gemera or Ghemara, the work of the rabbis termed Amoraïm, criticisms and comments on the Mischna. The part named *Halacha*, is dogmatic, legal, and doctrinal; the *Agaba*, is illustrative, narrative, and legendary.

After being almost universally condemned, and the MSS. often burnt, the defence of the Talmud was undertaken by the German reformer Reuchlin, in the 16th century, and between 1520 and 1523, the "Talmud Babylonicum," in 12 vols. fol., and the "Talmud Hierosolytanum," in one vol. fol., were printed at Venice. A discourse on the Talmud was given at the Royal Institution, 15 May, 1868, by Mr. Emanuel Deutsch, whose article in the "Quarterly Review," Oct. 1867, had attracted much attention.

Vol. I. of the first English translation of the Jerusalem Talmud by Dr. Moise Schwab, appeared in 1885; he had published part of a French translation.

After its failure he fled to Hamburg, and was there delivered up to the English, 24 Nov.; for which Bonaparte declared war upon Hamburg, 15 Oct. 1799. Tandy was liberated after the peace of Amiens in 1802.

It was conquered by Alfonso V. of Portugal in 1471, and given as a dower to princess Catherine, on her marriage with Charles II. of England, 1662; who, in 1683, caused the works to be blown up, and the place abandoned. Tangiers afterwards became a piratical station. See *Morocco*.

TANJORE (W. India). About 1678, Vencajee, a Mahratta chief, brother of the great Sevajee, made himself rajah. In 1749 a British expedition endeavoured to restore a deposed rajah without success; the reigning prince bought them off by the cession of territories. Much intervention ensued. In 1799 the company obtained possession of the country, engaging to support the rajah with nominal authority. The last is said to have died in 1855.

TANTALUM, a rare metal, discovered in an American mineral by Hatchett, in 1801, and named by him columbium; and in a Swedish mineral by Ekeberg, who gave it its present name. Wollaston pointed out the identity of the two metals in 1809; and Berzelius prepared pure metallic tantalum in 1824. In 1846 Rose discovered that tantalum was really a mixture of three metals, which he named tantalum, niobium, and pelopium.—*Gmelin.*

TAOISM, one of the three religions of China. The name is derived from the Tâo, or "Way," a treatise written by Lî Urh, a contemporary of Confucius in the sixth century B.C. The "Way" is the quiet, passionless discharge of all our duties, "Heaven" not being a ruler, but a pattern. Tâoism was modified by the introduction of Buddhism.

TAPESTRY. An art of weaving borrowed from the Saracens, and hence its original workers in France were called *Sarazinois*. The invention of tapestry hangings belongs [the date is not mentioned] to the Netherlands.—*Guicciardini.* Manufactured in France under Henry IV. by artists invited from Flanders, 1606. The art was brought into England by William Sheldon; and the first manufactory of it was established at Mortlake by sir Francis Crane, 17 James I. 1619.—*Salmon.* Under Louis XIV. the art of tapestry was much improved in France; see *Gobelin Tapestry.* Very early instances of making tapestry are mentioned by the ancient poets, and also in Scripture; so that the Saracens' manufacture is a revival of the art. For the tapestry said to have been wrought by Matilda, queen of England, see *Bayeux Tapestry.*

Tapestry manufactory established at Windsor by Mr. H. Henry, supported by the royal family, and others; exhibition opened in the town-hall, 6 December, 1878; works said to be closed, June, 1892.

TAR. The chemist Becher first proposed to make tar from pit-coal; the earl of Dundonald's patent was granted 1781. The mineral tar was discovered at Coalbrookdale, Shropshire, 1779; and in Scotland, Oct. 1792. Tar-water was first recommended for its medicinal virtues by the good Dr. Berkeley, bishop of Cloyne, about 1744. From benzole, discovered in coal-tar, many brilliant dyes are now produced; see *Benzole.*

TARA, a hill in Meath, Ireland, where the early kings of Ireland were inaugurated. Near here, on 26 May, 1798, the royalist troops, 400 strong, defeated the insurgent Irish (4000 men), 500 killed. On 15 Aug. 1843, Daniel O'Connell held a monster meeting here (250,000 persons said to have been assembled).

TARENTUM (now *Taranto*, S. Italy), was founded by the Greek Phalantus, B.C. 708. The people of Tarentum assisted by Pyrrhus, king of Epirus, supported a war which had been undertaken B.C. 281 by the Romans, to avenge the insults the Tarentines had offered to their ships when near their harbours; it was terminated after ten years; 300,000 prisoners were taken, and Tarentum became subject to Rome. Except the citadel, Tarentum was captured by Hannibal, 212, but recovered by Fabius, 209 B.C. Tarentum has shared in the revolutions of Southern Italy, and only ruins remain.

TARGUMS or EXPLANATIONS, names given to certain ancient Chaldee paraphrases of the Old Testament. The most remarkable are those of Onkelos, Jonathan-ben-Uzziel, and Joseph the Blind. The Targum of Onkelos is referred by some writers to the first century A.D.

It was taken from the Moors by Sancho IV. of Castile, 1291 or 1292; and was relieved, when besieged by them, after a great victory over the kings of Morocco and Granada, by Alfonso XI. of Castile and Alfonso IV. of Portugal, 28 or 30 Oct. 1340. The conflict is called the battle of Salado,

having been fought on the banks of that river. Tarifa was taken by the French in 1823.

TARIFF (said to have been derived from Tarifa, where duties were formerly collected), a book of duties charged on goods exported or imported. Our tariff in 1840 comprised 1042 articles; the number was reduced (by sir Robert Peel) in 1845 and 1847. It comprised 439 articles in 1857; this number was greatly reduced in 1860. TARRAGONA (N.E. Spain), occupied as a naval station by the British before their capture of Gibraltar in 1704. It was stormed and sacked by the French under Suchet, 29 Jan. 1811, and the inhabitants put to the sword. Population, 1887, 27,225.

TARTAN or HIGHLAND PLAID, the dress of the Scottish Highlanders, said to have been derived from the ancient Gauls, or Celtæ, the *Galli non braccati*.

TARTARIC ACID is said to have been the first discovery of the eminent chemist, Scheele, who procured it in a separate state by boiling tar with lime, and in decomposing the tartrate of lime thus formed by means of sulphuric acid, about 1770. In 1859 baron Liebig formed tartaric acid from other sources.

TARTARY, a name given in the middle ages to a part of Central Asia and Eastern Europe, see *Turkestan* and *Crimea*. The Tatars, or Tartars, or Mongols, or Moguls, were known in antiquity as Scythians. During the decline of the Roman empire, these tribes began to seek more fertile regions; and the first who reached the frontier of Italy were the Huns, the ancestors of the modern Mongols. The first acknowledged sovereign of this vast country was the famous Genghis Khan. His empire, by the conquest of China, Persia, and all central Asia (1206-27), became one of the most formidable ever established; but it was split into parts in a few reigns. Timur, or Tamerlane, again conquered Persia, broke the power of the Turks in Asia Minor (1370-1400), and founded the Mogul dynasty in India, which began with Baber in 1525, and formed the most splendid court in Asia till the close of the 18th century; see *Golden Horde*. The Calmucks, a branch of the Tartars, expelled from China, settled on the banks of the Volga in 1672, but returned in 1771, and thousands perished on the journey.

TAVERNS may be traced to the 13th century. "In the raigne of king Edward the Third, *only three taverns* were allowed in London: one in Chepe, one in Walbrok, and the other in Lombard-street."—*Spelman*. The *Boar's Head*, in East-cheap, existed in the reign of Henry IV., and was the rendezvous of prince Henry and his dissolute companions. Shakspeare mentions it as the residence of Mrs. Quickly, and the scene of Falstaff's merriment.—*Shakspeare*, "Henry IV." The *White Hart*, Bishopsgate, established in 1480, was rebuilt in 1829. Taverns were licensed in 1752.

Taverns were restricted by 7 Edward VI. 1552-3, to 40 in London, 8 in York, 4 in Norwich, 3 in Westminster, 6 in Bristol, 3 in Lincoln, 4 in Hull, 3 in Shrewsbury, 4 in Exeter, 3 in Salisbury, 4 in Gloucester, 4 in Chester, 3 in Hereford, 3 in Worcester, 3 in Southampton, 4 in Canterbury, 3 in Ipswich, 3 in Winchester, 3 in Oxford, 4 in Cambridge, 3 in Colchester, 4 in Newcastle-upon-Tyne.

TAXES were levied by Solon, the Athenian legislator, about 594 B.C. The first class of citizens paid an Attic talent of silver, about 55*l.* of our money. Darius, the son of Hystaspes, levied a land-tax by assessment, which was deemed so odious that his subjects styled him, by way of derision, Darius the Trader, 480 B.C.—*D'Eon*. Taxes in specie were first introduced into England by William I., 1067, and he raised them arbitrarily; yet subsidies in kind, as in wool, leather, and other products of the country, continued till the accession of Richard II., 1377.—*Camden;* see *Revenue* and *Income Tax*. "TAXES ON KNOWLEDGE" (see *Advertisement Duty*, *Newspaper Stamp*, and *Paper Duty*). For his exertions in repealing these, a testimonial was presented to Mr. T. Milner Gibson in 1861. The *assessed* taxes now include *land tax*, *house duty*, and *property* and *income tax*. The Taxes Management Act, 43 & 44 Vict. c. 19, passed 6 Aug. 1880 (see below). Mr. Stephen Dowell's "History of Taxation and Taxes in England," published in 1884-8. The elder Wm. Pitt in his great speech on the Stamp Act imposed on the colonies without their consent, 1765—66, said that taxation and representation should go hand in hand. See *Stamp Duties*. The Statistical Abstract published annually by the government gives much information respecting taxation, revenue, and expenditure for 15 years. The brunt of the attack was borne by two French regiments under general D'Herbillon. The loss of the allies was about 1200; 200 of these were from the Sardinian contingent, which behaved with great gallantry, under the command of general La Marmora. The Russian general Read, and the Sardinian general Montevecchio, were killed. The object of the attack was the relief of Sebastopol, then closely besieged by the English and French.

TE DEUM, a song of praise used by the Romish and English churches, beginning "*Te Deum Laudamus*—We praise thee, O God," supposed to be the composition of Augustin and Ambrose, about 390. The original music is very ancient.

TEETOTALER, a term applied to an abstainer from all fermented liquors, originated with Richard Turner, an artisan of Preston, who, contending for the principle at a temperance meeting about Sept. 1833, asserted "that nothing but *te-te-total* will do." The word was immediately adopted. He died 27 Oct. 1846. These facts are taken from the "Staunch Teetotaler," edited by Joseph Livesey, of Preston (an originator of the movement in 1832, he died, aged 90, 2 Sept. 1884), Jan. 1867. TELEGRAPHS (from the Greek, *tele*, afar, and *grapho*, I write). Æschylus, in his Agamemnon (B.C. 500), describes the communication of intelligence by burning torches as signals. Polybius, the Greek historian (who died about 122 B.C.), calls the different instruments used by the ancients for communicating information, *pyrsiæ*, because the signals were always made by fire. In 1663, a plan was suggested by the marquis of Worcester, and a telegraph was suggested by Dr. Hooke, 1684. M. Amontons is also said to have been the inventor of telegraphs about this period. James II., while duke of York, originated a set of navy signals, which were systematised by Kempenfeldt in 1780; and a dictionary was compiled by sir Home Popham. M. Chappe then invented the telegraph first used by the French in 1792, and two were erected over the Admiralty-office, London, 1796. The semaphore was erected there 1816. The naval signals by telegraph enabled 400 previously concerted sentences to be transmitted from ship to ship, by varying the combinations of two revolving crosses. Baron Reuter's telegraph agency founded at Aix la Chapelle, 1851. Acts relating to telegraphs were passed in 1863 and 1866. The telegraph act, passed 31 July, 1868, enabled the postmaster-general to purchase existing electric telegraphs (not less than 1*s.* for a telegram, 20 words). Mr. Scudamore was appointed director, Jan. 1872. The principle of a 6*d.* telegram adopted by the commons, 29 March, 1883, and enacted to come into operation 1 Oct. 1883; deferred; bill introduced by Mr. Shaw-Lefevre 30 March; act passed 14 Aug.; came into operation 1 Oct. 1885. Another telegraph act passed 28 June, 1892. See *Telephone.* Great destruction of telegraph posts and wires by gale and snowstorm; London streets blocked by fallen wires 26-27 Dec. 1886. The Society of Telegraph Engineers founded 1871; held first general meeting, 28 Feb. 1872, Chas. Wm. Siemens, president; incorporated 1883. Present title "Institution of Electrical Engineers" (1889). TELEKOUPHONON, or speaking telegraph, consisted of piping of gutta percha, caoutchouc, glass, or earthenware, with a terminal mouthpiece of ivory, bone, wood, or metal. It was used for dockyards and large establishments. It was described by Mr. Francis Whishaw at the meeting of the British Association at Swansea, August, 1848.

TEL-EL-KEBIR, Egypt, the site of the entrenched camp of the rebel general, Arabi Pasha, his force being about 17,500 regular infantry, 2,500 cavalry, 6000 Bedouins and other irregulars, and 70 guns; captured by the British 13 Sept. 1882.

Sir Garnet Wolseley broke up his camp at Ismailia on the night of 12 Sept. and began his advance at 1.30 a.m., his force being about 11,000 infantry, 2000 cavalry, and 40 guns; the troops marched rapidly in the dark, each regiment endeavouring to be first. At daybreak they arrived at the camp. The surprised Egyptians filled the trenches and fought well under cover; but when the British scaled the parapets, they at first resisted bravely, but afterwards fled, being hotly pursued by the British cavalry, leaving all their guns, ammunition, &c. in the hands of the victors. Thousands were killed or made prisoners. Arabi Pasha fled towards Cairo. Among our killed were majors Colville,

Underwood, and Somervell, and lieut McNeill. The British general's masterly plans of the campaign were thus successfully carried out by his efficient staff and gallant army, which included many young soldiers; the Irish and Highland regiments and the Guards being specially distinguished. Arabi Pasha's army was completely broken up, and the British entered Cairo the next day, 14 Sept. British killed about 52, and 380 wounded; Egyptian killed and wounded about 1500. The Highlanders bore the brunt of the action.

TELEMETER, &c., an instrument for determining the distance between a gun and the object fired at. Lieut. von Ehrenberg and major Montaudon, in Baden, constructed a telemeter the size of a watch, by which the distance is determined and shown on a dial by the action of sound, 1878-85. *Teletopometer*, another apparatus for ascertaining the distance from point to point, invented by Dr. Luigi Cerebotani, was announced in Sept. 1885; two telescopes are employed.

TELEPATHY, "the supersensory transference of thoughts and feelings from one mind to another"; the principal subject of "Phantasms of the Living," edited by Messrs. Edmund Gurney, Frederic Myers, and Frank Podmore, and issued by the society for psychical research about 30 Oct. 1886. See *Psychology*, 1897.

TEMPLARS. The military order of "soldiers of the Temple," to protect pilgrims, was founded about 1118 by Baldwin II., king of Jerusalem, confirmed by pope Honorius II., 1128. The Templars were numerous in several countries, and came to England before 1185. Their wealth having excited the cupidity of the French kings, the order was suppressed by the council of Vienne, and part of its revenues was bestowed upon other orders about 1312. Numbers of the order were tried, condemned, and burned alive or hanged in 1308-10, and it suffered much persecution throughout Europe; 68 knights were burnt at Paris, 1310. Pope Clement V. abolished the order, April, 1312. The grand master Molay was burnt alive at Paris, 18 March, 1314. Their property in England was given to the Hospitallers, and the head of the order in England died in the Tower. See *Good Templars*.

TEMPLE (London), the dwelling of the Knights Templars, consecrated by Heraclius, patriarch of Jerusalem, 1185, at the suppression of the order, was purchased by the professors of the common law, and converted into inns, 1311, afterwards called the Inner and Middle Temple. Essex house, also a part of the house of the Templars, was called the Outer Temple, because it was situated without Temple-bar.

The *Temple hall* was built in 1572

On their return to Germany, the knights were invited to subdue and christianise the country now called Prussia and its neighbourhood, which they gradually accomplished. Their territories were invaded, and their army was defeated, with great slaughter, near Tannenberg, in East Prussia, by Jagellon, duke of Lithuania, 15 July, 1410, when the grand master and many of the knights were slain.

A large part of their possessions was incorporated into Poland in 1466, and into Brandenburg about 1521. In 1525, the grand master was made a prince of the empire, and the order much weakened. Its remaining possessions were seized by Napoleon I. in 1809. See *Prussia*, &c.

THEATRE (Greek *theatron*, "a place for seeing"). Greek theatres for the exhibition of the drama and musical performances were gradually developed from the ring in which songs and choruses were performed in honour of Dionysus or Bacchus. Greek theatres are well described and illustrated in Mr. Robert W. Lowe's article *Theatre* in Chamber's Encyclopedia, 1892. The theatre of Dionysus at Athens could contain 30,000 spectators, and that at Megalopolis (*which see*), 44,000. The revival of the drama in the 16th century led to the construction of modern theatres on Greek models such as that at Rome by Bramante, 1580; the *Teatro Olimpico* at Vicenza by Palladio, 1584. "Modern Opera Houses and Theatres," by Edwin O. Sachs, Vol. II., published Jan. 1898. See *Amphitheatres*, *Comédie Française*, and *Operas*.

THEBAN LEGION, according to tradition, was composed of Christians, and submitted to martyrdom rather than attack their brethren during the persecution of the emperor Maximin, or sacrifice to the gods, about A.D. 286. Their leader Maurice was canonised.

THEBES or LUXOR, in Upper Egypt, called also Diospolis, as being sacred to Jupiter. *Homer.* Its foundation is mythically attributed to Osiris. It is said to have been the magnificent capital of Egypt about 1600 B.C., having a circuit of about 14 geographical miles. It was then the chief seat of the worship of Ammon, or Ammun, the Zeus Ammon of the Greeks, and the Jupiter Ammon of the Romans, and hence was called No Ammon by the Hebrews. Thebes was ruined by Cambyses, king of Persia, 525 B.C., and by the foundation of Alexandria, 332 B.C.; it rebelled and was taken by Ptolemy Lathyrus, 86 B.C., and few traces of it were seen in the age of Juvenal; see *Memnoneium.* After centuries of neglect, its wonderful ruins have been greatly visited since the explorations of Belzoni, 1817. — The tombs of Amenophis II. abt. 1500 B.C., XVIII. dynasty, and 7 other royal mummies, discovered by M. Loret in perfect preservation, March, 1898. THEBES, N. Greece (the capital is mythically said to have been founded by Cadmus.) The legendary history of Œdipus and his family, celebrated by the Greek tragic poets, belongs to Thebes. It became a republic about 1120 B.C., and flourished under Epaminondas 378-362 B.C. The "sacred band" formed by him, 377 B.C., was revived in 1877. Thebes' seven gates are mentioned by Homer. See *Bœotia* and *Greece.* Thebes suffered much by earthquake shocks, end of May, 1893, and was nearly destroyed by earthquakes, 20 April *et seq.* 1894; active relief measures were organized.

THEFT was punished by heavy fines among the Jews; by death at Athens, by the laws of Draco: see *Draco.* The Anglo-Saxons nominally punished theft with death, if above 12*d.* value; but the criminal could redeem his life by a ransom. In the 9th of Henry I. this power of redemption was taken away, 1108. The punishment of theft was very severe in England, till mitigated by Peel's acts 9 & 10 Geo. IV. 1829. The laws respecting theft were consolidated in 1862. Larceny act passed 4 Aug. 1896.

THEISTS (*Theos*, God), a name given to deists about 1660.—*Dean Martin.* See *Deism*, *Unitarians*, and *Voysey.*

THELLUSSON'S WILL, a most singular document. Mr. Peter Isaac Thellusson, a Genevese and an affluent merchant of London, left 100,000*l.* to his widow and children; and the remainder of his property, more than 600,000*l.*, he left to trustees, to accumulate during the lives of his three sons, and the lives of their sons; then the estates, directed to be purchased with the produce of the accumulated fund, were to be conveyed to the eldest lineal male descendant of his three sons, with the benefit of survivorship. Should no heir then exist, the whole was to be applied, by the agency of the sinking fund, to the discharge of the national debt. It is said that Mr. Thellusson held much property in trust, and that he desired a sufficient interval of time to elapse for the appearance of just claimants. He died 21 July, 1797. His will incurred much public censure, and was contested by the heirs-at-law, but finally established by a decision of the house of lords, 25 June, 1805. The last surviving grandson died in Feb. 1856. A dispute then arose whether the eldest male descendant or the male descendant of the eldest son should inherit the property. The question was decided on appeal by the house of lords (9 June, 1859), in favour of the latter, lord Rendlesham and Charles S. Thellusson confirming the decision of the Master of the Rolls in 1858. In consequence of the legal expenses the property is said not to exceed greatly its value in the testator's lifetime. On 28 July, 1800, the Thellusson act was passed, restraining testators from devising their property for purposes of accumulation for longer than 21 years after death; any other direction to be void.

THEOCRACY, government by God, existed among the Israelites till Saul was made king, about 1095 B.C. (*Sam.* viii. 7.)

THEODOLITE, an instrument for measuring horizontal angles, used in surveying, consists of a telescope and a divided circle. It was probably first constructed in the 17th century. THEODOSIAN CODE, see *Codes.*

"THEOLOGIA GERMANICA," or "Teutsche Theologey" (printed 1528; Latin and French editions, 1558), a German mystical work, written about the 14th century. In it the "good man," disgusted with the corruptions in church and state, is led to seek for God in the temple of the heart. Luther is said to have placed the work next to the Bible and St. Augustin.

THEOLOGY (from the Greek *Theos*, God), the science which treats of the nature and attributes of God, of his relations to man, and of the manner in which they may be discovered. It is generally divided into two heads. 1. *Inspired*, including the Holy Scriptures, their interpretation, &c. 2. *Natural;* which lord Bacon calls the first part of philosophy. — Butler's "Analogy of Religion" (1736) and Paley's "Natural Theology" (1802) are eminent books on the latter subject.—Abelard (died 1142) wrote "Theologia Christiania." The "Summa Totius Theologiæ" by Thomas Aquinas (born about 1224), a standard Roman catholic work, was printed with commentaries, &c., in 1596.

THEOPHILANTHROPISTS (lovers of God and man), a sect formed in France in 1796; and headed by one of the five directors, Lepaux, in 1797; was dissolved in 1802.

THEOSOPHY (*theos*, God; *sophia*, wisdom), divine wisdom, a name that has been given since the time of Ammonius Saccas, in the third century, to various schools of philosophy and their mystical tenets respecting the spiritual nature of man and his relation to the universe. Followers of Giordano Bruno and Paracelsus, in the 16th century, are termed theosophists.

The *Theosophical Society* was founded in America by Madame Blavatsky, aided by colonel Olcott, about 1875–6. Aims at universal brotherhood and the study

of Eastern philosophy. It has a station in London, and many branches in India and other parts. Mrs. Anna Kingsford, M.D., president in 1883, died 22 Feb. 1888.

Fahrenheit's thermometer invented about 1726; Réaumur's and Celsius's (the latter now termed centigrade) soon after. [Fahrenheit's scale is usually employed in England, and Réaumur's and the centigrade on the continent.]

The mode of construction by substituting quicksilver for spirits was invented some years subsequently. Halley proposed it in 1697.

Mr. L. M. Casella issued a minimum thermometer in Sept. 1861. It registers degrees of cold by means of mercury. Mr. Casella made many improvements in thermometers, &c., and died, 23 April, 1897.

Negretti and Zambra's registering minimum thermometers, adapted for deep-sea purposes, made known early in 1874.

Letter from Mr. James J. Hicks, of London, stating that since 1861, he makes about 250,000 or more thermometers of all kinds, annually, hundreds of which are tested at the Kew Observatory, and are superior to those of foreign manufacture, *Times*, 23 March, 1897.

THERMOPHONE, in which sonorous vibrations are produced by the expansion of heated bodies connected with an electro-magnet. The apparatus was constructed by Theodor Wiesendanger, and described by him in October, 1878.

THERMOPYLÆ (Doris, N. Greece). Leonidas, at the head of 300 Spartans and 700 Thespians, at the defile of Thermopylæ, withstood the whole force of the Persians during three days, 7, 8, 9 Aug. 480 B.C., when Ephialtes, a Trachinian, perfidiously leading the enemy by a secret path up the mountains, brought them to the rear of the Greeks, who, thus placed between two assailants, perished gloriously on heaps of their slaughtered foes. One Greek only returned home, and he was received with reproaches for having fled.* Here Antiochus the Great, king of Syria, was defeated by the Romans, 191 B.C.

THERMUM, THERMUS, or THERMA (Greece), a strong city, the Acropolis of Ætolia, N. Greece, was captured and ravaged by Philip V. of Macedon, 218 and 206 B.C., on account of its favouring the Romans.

THESPIÆ, a city of Bœotia, N. Greece. 700 of its citizens perished with Leonidas at Thermopylæ, Aug. 480 B.C. It suffered through the jealousy of the Thebans, who destroyed its walls in 372 B.C.

THESSALONICA (now Salonica), a city in Macedonia, N. Greece, originally Therme, but rebuilt by Cassander, and said to have been named after his wife, Thessalonica, daughter of Philip, after 315 B.C. Here Paul preached, 53; and to the church here he addressed two epistles in 54. In consequence of seditions, a frightful massacre of the inhabitants took place in 390, by order of the emperor Theodosius. Thessalonica partook of the changes of the Eastern empire. Thessalonica was taken by the Saracens, with great slaughter, 30 July, 904; by the Normans of Sicily, 15 Aug. 1185; and after various changes was taken from the Venetians by the Turks under Amurath, 1430. THESSALY (N. Greece), the seat of many of the adventures described by the poets. The first king of whom we have any certain knowledge was Hellen, son of Deucalion, from whom his subjects were called Hellenists, a name afterwards extended to all Greeks. From Thessaly came the Achæans, the Ætolians, the Dorians, the Hellenes, &c. The two most remarkable events in the early history of this country are the deluge of Deucalion, 1548 B.C., and the expedition of the Argonauts, 1263 B.C.; *see them severally*. Thessaly long aimed at neutrality in Grecian affairs, but became involved through its rulers, the tyrants of Pheræ;—Lycophron, about 404 B.C.; his son Jason, 374, assassinated 370; Alexander, the most eminent, defied Athens and Thebes; assassinated 359. Philip of Macedon, after a defeat (353 B.C.), gained a victory over the tyrants, 352; and subjugated the country wholly, 343. The Romans gave a nominal freedom to Thessaly after their victory at Cynoscephalæ, 197. It is now included in the kingdom of Greece by the treaty of 24 May, signed 2 July, and occupied Aug. — Sept. 1881. Railway from Volo to Larissa the capital, opened by the king, 4 May, 1884. See *Inundations*, 1883; *Greco-Turkish War* and *Greece*, 1897-8.

Thibet was visited by Marco Polo, 1278; by Jesuits about 1661-2; Bogle and Hamilton, 1774; and Thomas Manning, 1810. An astronomical survey was carried on surreptitiously by two pundits of semi-Thibet origin, under the superintendence of capt. Montgomerie, 1865-7. War with Nepaul, May; peace, June, 1884. Hon. THIMBLES are said to have been found at Herculaneum, and long ago used by the Chinese. Their invention in Europe is traditionally ascribed to Nicolas van Benschoten, of Amsterdam, in the 17th century. The art of making them was brought to England by John Lofting, a mechanic, from Holland, who set up a workshop at Islington, near London, and practised the manufacture in various metals with profit and success, about 1695.

It was taken by the duke of Guise, 23 June, 1558, after an obstinate defence, and returned to Philip II. by the peace of Cateau-Cambrésis. It successfully resisted the marquis de Feuquières in 1637, but was taken after four months' siege by the duc d'Enghien, 10 Aug. 1643, and remained with France. It successfully resisted the Austrians in 1792, and the Prussians in 1814. It was invested by the Germans in Aug. 1870, and after bombardment, being in flames, surrendered 24 Nov. following.

THOMAS'S HOSPITAL, ST. (Southwark), was founded as an almshouse by Richard, prior of Bermondsey, in 1213, and surrendered to Henry VIII. in 1538. In 1551 the mayor and citizens of London, having purchased of Edward VI. the manor of Southwark, including this hospital, repaired and enlarged it, and admitted into it 260 poor, sick, and helpless objects; upon which the king, in 1553, incorporated it, together with Bethlehem, St. Bartholomew's, &c. It was rebuilt in 1693. In 1862, the site was sold to the South-eastern railway company, and the patients were removed to the Surrey music hall. * Some Scottish historians make the origin of this order very ancient. The abbot Justinian says it was instituted by Achaius I. of Scotland, 809, when that monarch made an alliance with Charlemagne, and then took for his device the thistle. It is stated that the king Hungus, the Pict, had a dream, in which St. Andrew made a midnight visit, and promised him a sure victory over his foes, the Northumbrians; and that the next day St. Andrew's Cross (×) appeared in the air, and the Northumbrians were defeated. On this story, it is said, Achaius framed the order more than 700 years before James V.

THOMISTS, see *Scotists.*

THOMITES or TOMITES, a body of enthusiasts who assembled at Boughton, near Canterbury. An insane Cornish publican named John Nicholls, called Thom, or Tom, assumed the name of sir W. Courtenay, knight of Malta and king of Jerusalem, came into Kent, was an unsuccessful candidate for parliament, and incited the rabble against the Poor Law act. On 31 May, 1838, a farmer of the neighbourhood, whose servant had joined the crowd which attended Thom, sent a constable to fetch him back; but on his arrival on the ground he was shot dead by Thom. The military were then called out, and lieut. Bennett proceeded to take the murderer into custody; but Thom advanced, and, firing a pistol, killed the lieutenant on the spot. One of the soldiers fired at Thom, and laid him dead by the side of lieut. Bennett. The people then attacked the military, who were compelled to fire, and eight more persons were killed before the mob dispersed.

THRASHING-MACHINES. The flail was the only instrument formerly in use for thrashing corn. The Romans used a machine called the *tribulum*, a sledge loaded with stones or iron, drawn over the corn-sheaves by horses. The first machine attempted in modern times was invented by Michael Menzies, at Edinburgh, about 1732; Andrew Meikle invented a machine in 1776. Many improvements have been since made, and steam is employed. An act for the prevention of accidents by these machines was passed in 1879.

Carstares, a presbyterian minister, was the last who suffered by it, before the Scotch privy council, to make him divulge secrets entrusted to him, which he firmly resisted. After the revolution in 1688, the thumb-screw was presented to him by the council. King William expressed a desire to see it, and tried it on, bidding the doctor to turn the screw; but, at the third turn, he cried out "Hold—*hold!* doctor: another turn would make *me* confess anything."

TIMES NEWSPAPER. On 1 Jan. 1785, Mr. John Walter published the first number of the *Daily Universal Register*, price 2½*d.*, printed on the logographic system (invented by Henry Johnson, a compositor), in which types containing syllables and words were employed instead of single letters.

On 1 Jan. 1788, the paper was named the *Times*.

In 1803, when Mr. John Walter gave up the paper to his son John, the circulation was about 1000; that of the *Morning Post* being 4500.

Mr. John Walter (I.), born, 1739; died, 16 Nov. 1812.

Dr. Stoddart (satirised as Dr. Slop by Moore the poet) became editor in 1812, but five years after retired and set up in opposition the *New Times*, an unprofitable speculation. Thomas Barnes became next editor. He died 7 May, 1841, and was succeeded by his assistant John Thaddeus Delane (son of W. F. A. Delane, financial manager) who retired in 1877, and died 22 Nov. 1879.

On 28 Nov. 1814, the *Times* was first printed by steam power (the invention of F. König), 1200 per hour, afterwards increased to 2000 and 4000.

It is asserted that the *Times* was termed the "*Thunderer*" in consequence of an article by Edward Sterling in which are the words, "We thundered forth articles on reform, &c." when Barnes was editor.

On 19 Jan. 1829, the first double number appeared.

In July, 1834, an attack of Mr. O'Connell in the house of commons on the correctness of the reports of the debates in the *Times* was signally defeated.

Shortly after began the convenient summary of the debates, written in the first instance by Mr. Horace Twiss.

In 1841 the *Times* was instrumental in detecting and exposing a scheme organised by Allan George Bogle and others, to defraud by forgery all the influential bankers of Europe. This brought on the proprietors an action for libel (in the case Bogle *v.* Lawson). The jury found the charge to be true, giving a verdict of *one farthing* damages, but the judges refused costs. Subscriptions were set on foot at the Mansion-house and in all parts of Europe to reimburse the proprietors for the immense outlay in defending the action. This they firmly declined; and the money was expended in establishing *Times Scholarships* at Oxford and Cambridge, and at Christ's Hospital, and other schools; a marble tablet also, commemorating the event, was set up in the Royal Exchange and at the *Times* office. These were the greatest honours ever conceded to a newspaper.

In Oct. 1845, the *Times* express was for the first time conveyed to India overland, by the agency of lieut. Waghorn.

Of the number of the *Times* containing the life of the duke of Wellington for 19 Nov. 1852, 70,000 were sold—the ordinary number being then 36,000; the circulation is stated to vary from 50,000 to 60,000 (1868).

The *Times* (a slip) announcing permission to relax restriction of issue of bank-notes, published 24 Oct. 1847.

Mr. John Walter (II.) died 28 July, 1847.

In 1854, the proprietors sent Mr. W. H. Russell as their special correspondent to the seat of war in the Crimea; in 1857 to India.

Times Fund.—On the 12th of Oct. 1854, sir Robert Peel originated by a letter in the *Times* a subscription for the sick and wounded in the Crimean war, and in less than a fortnight 15,000*l.* were sent to the *Times* office to be thus appropriated. Mr. Macdonald was sent out by the proprietors as special commissioner to administer the fund, from which large quantities of food and clothing were supplied to the sufferers, with inestimable advantage; see *Scutari*, and *Nightingale*.

In Dec. 1858, the *Times* drew attention to the state of the houseless poor of London; and in a few days 8000*l.* were subscribed for their relief.

In 1851, 13,000,000 copies were sold; in 1857, 16,100,000; in 1859, 16,900,000; in 1860, 16,670,000.

The *Times* of 21 June, 1861, contained 4076 advertisements (about 1810 it contained 150 advertisements).

Stereotypes from papier-mâché moulds introduced, 1856; much improved 1860.

The "Walter press" invented by John Cameron Macdonald (aft. Manager) & Joseph Calverley, prints about 15,000 an hour, perfected, 1862-71.

A list of the contents, inserted over the first leader, appeared first, 3 Feb. 1869.

3½ pages tables of metropolitan charities appeared 11 Feb. 1860.

John Walter (IV.) drowned 24 Dec. 1870.

Special train for conveying the *Times*, North-Western Railway, began to run, 4.55 a.m., 16 Feb. 1875.

Annual summaries, 1851-75, reprinted, price 1*s.* (type set-up by composing-machines).

TIN. The Phœnicians traded with England for more than 1100 years before the Christian era. Under the Saxons, our tin mines appear to have been neglected; but under the Normans, they produced considerable revenues to the earls of Cornwall, particularly to Richard, brother of Henry III. A charter and various immunities were granted by Edmund, earl Richard's brother, who framed the Stannary Laws (*which see*), laying a duty on the tin. Edward III. confirmed the tinners in their

privileges, and erected Cornwall into a dukedom, with which he invested his son, Edward the Black Prince, 1337. Since that time the heirs-apparent to the crown of England, if eldest sons, have enjoyed it successively. Tin mines were discovered in Germany, which lessened the value of those in England, till then the only tin mines in Europe, 1240.—*Anderson.* Discovered in Barbary, 1640; in India, 1740; in New Spain, 1782. England and Normandy were reunited under Henry, at the decease of William Rufus, who had already possessed himself of Normandy by a mortgage from his brother Robert, at his setting out for Palestine. Robert, on his return, recovered Normandy by an accommodation with Henry; but having afterwards quarrelled, Robert was defeated in the battle of Tinchebray, 28 Sept. 1106, and Normandy was annexed to the crown of England.—*Hénault.*

As Byzantine remains are also found some of his conclusions are disputed by eminent antiquaries.

TITHES or TENTHS, were commanded to be given to the tribe of Levi, 1490 B.C. (*Lev.* xxvii. 30). Abraham returning from his victory over the kings (*Gen.* xiv.), gave tithes of the spoil to Melchisedek, king of Salem, priest of the most high God (1913 B.C.) For the first 800 years of the Christian church they were given purely as alms, and were voluntary.—*Wickliffe.* "I will not put the title of the clergy to tithes upon any divine right, though such a right certainly commenced, and I believe as certainly ceased, with the Jewish theocracy."—*Blackstone.* They were established in France by Charlemagne, about 800, and abolished 1789. Tenths were confirmed in the Lateran councils, 1215.—*Rainailda.* The payment of tithes appears to have been claimed by Augustin, the first archbishop of Canterbury, and to have been allowed by Ethelbert, king of Kent, under the term "God's fee," about 600.

The first mention of them in any English written law is a constitutional decree made in a synod strongly enjoining tithes, 786.

TOBACCO,* *Nicotiana tabacum*, received its name from Tabacco, a province of Yucatan, New Spain; some say from the island of Tobago, one of the Caribbees; others from Tobasco, in the Gulf of Florida. It is said to have been first observed at St. Domingo, in Cuba, 1492; and to have been used freely by the Spaniards in Yucatan in 1520. Tobacco was either first brought to England in 1565, by sir John Hawkins; or by sir Walter Raleigh and sir Francis Drake, in 1586. It was manufactured only for exportation for some years. *Stow's Chron.* The Pied Bull inn, at Islington, is said to have been the first house in England where tobacco was smoked. In 1584 a proclamation was issued against it. James I. published "A Counterblaste against Tobacco," and the star-chamber ordered the duties to be 6*s.* 10*d.* per pound, 1614. Its cultivation was prohibited in England by Charles II., 1684. Act laying a duty on the importation was passed 1684. The cultivation was allowed in Ireland, 1779. land. Their liberties were, however, greatly endangered in the latter days of queen Anne, who died on the day that the Schism bill was to become a law, 1 Aug. 1714.

The toleration granted was somewhat limited. It exempted persons who took the new oath of allegiance and supremacy, and made also a declaration against popery, from the penalties incurred by absenting themselves from church and holding unlawful conventicles; and it allowed the quakers to substitute an affirmation for an oath, but did not relax the provisions of the Test act (*which see*). The party spirit of the times checked the king in his liberal measures.

TOLLS were first paid by vessels passing the Stade on the Elbe, 1109. They were first demanded by the Danes of vessels passing the Sound, 1341; see *Stade*, and *Sound*. *Tollbars* in England originated in 1267, on the grant of a penny for every waggon that passed through a certain manor; and the first regular toll was collected a few years after for mending the road in London between St. Giles's and Temple-bar. Gathered for repairing the highways of Holborn-inn-lane and Martin's-lane (now Aldersgate-street), 1346. Toll-gate or *turnpikes* were set up in 1663. In 1827, 27 turnpikes near London were removed by parliament; 81 turnpikes and toll-bars ceased on the north of London on 1 July, 1864; and 61 on the south side, ceased on 31 Oct. 1865; and many others on the Essex and Middlesex roads ceased on 31 Oct. 1866; the remainder on the north of London ceased 1 July, 1872. The tolls on the Commercial roads, London, E., were abolished 5 Aug. 1871. The tolls on Waterloo and other metropolitan bridges abolished, 1878-9. TOLOSA. On the plain named las Navas de Tolosa, near the Sierra Morena, S. Spain, Alfonso, king of Castile, aided by the kings of Arragon and Navarre, gained a great victory over the Moors, 16 July, 1212. This conflict is sometimes termed the battle of Muradal.

TONOMETER, a delicate apparatus (consisting of 52 forks) for tuning musical instruments, by marking the number of vibrations, was invented by H. Scheibler of Crefeld, and described in his "Tonmesser," 1834. It received little notice till M. Kœnig removed some of the difficulties opposed to its successful use, and exhibited it at the International Exhibition of 1862.

TONSURE, the clerical crown, adopted, it is said, in imitation of St. Peter, or of Christ's crown of thorns, was disapproved of in the fourth century as pertaining only to penitents, and not made essential till the end of the fifth or beginning of the sixth century.

TONTINES, loans given for life annuities with benefit of survivorship, invented by Laurence Tonti, a Neapolitan. They were first set on foot at Paris to reconcile the people to cardinal Mazarin's government, by amusing them with the hope of becoming suddenly rich, 1653. *Voltaire.* Tonti died in the Bastile after seven years' imprisonment. A Mr. Jennings was an original subscriber for a 100*l.* share in a tontine company; and being the last survivor of the shareholders, his share produced him 3000*l.* per annum. He died aged 103 years, 19 June, 1798, worth 2,115,244*l.*; see *Alexandra Park.*

By the termination of a tontine begun by M. Lafarges in 1791 to diminish the national debt the French government received 1,218,000 francs Dec. 1888

TOOLS. Many of the tools in common use are described and represented in Rosellini's magnificent work, "Monumenti dell' Egitto e della Nubia," 1832-44. The tools used by Bezaleel and Aholiab in the construction of the tabernacle, described in Exodus xxxi. and xxxv. B.C. (1491), were doubtless Egyptian or Phoenician. In building Solomon's temple (1014-04) B.C., "there was neither hammer nor axe nor any tool of iron heard," the stone and other materials being previously prepared (1 Kings vi. 7). The invention of many tools is mythically ascribed to Dædalus, the Athenian artificer in the 14th century B.C.

TOPOGRAPHICAL SOCIETY OF LONDON was founded 1879; inaugurated at the Mansion-house, 28 Oct. 1880.

TORBANEHILL MINERAL. Mr. Gillespie, of Torbanehill, granted a lease of all the coal in the estate to Messrs. Russell. In the course of working, the lessees extracted a combustible mineral of considerable value as a source of coal-gas, and realised a large profit in the sale of it as gas-coal. The lessor then denied that the mineral was coal, and disputed the right of the lessees to work it. At the trial in 1853 there was a great array of scientific men and practical gas engineers, and the evidence was most conflicting. One side maintained the mineral to be coal, the other that it was a bituminous schist. The judge set aside the scientific evidence, and the jury pronounced it to be coal. The authorities in Prussia have since pronounced it *not* to be coal. *Percy.*

TORDESILLAS (near Valladolid). Here was signed, 7 June, 1494, a treaty modifying the boundary line which pope Alexander VI. had assigned, in May, 1493, in his division of the new world between Spain and Portugal.

TORGAU (Saxony, N. Germany), the site of a battle between Frederick II. of Prussia and the Austrians, in which the former obtained a signal victory; the Austrian general, count Daun, being wounded, 3 Nov. 1760. He had, in 1757, obtained a great victory over the Prussian king. Torgau was taken by the allies in 1814; and given to Prussia, 1815.

TORIES, a term given to a political party about 1678; see *Whig.* Dr. Johnson defines a Tory as one who adheres to the ancient constitution of the state, and the apostolical hierarchy of the Church of England. The Tories long maintained the doctrines of "divine hereditary indefeasible right, lineal succession, passive obedience, prerogative," &c. *Bolingbroke;* see *Conservatives.* For the chief Tory administrations, see *Pitt, Perceval, Liverpool, Wellington, Peel, Derby,* and *Disraeli.* For TORY DEMOCRACY see *Fourth Party.*

TORPEDO SHELLS, a name given to explosives placed under ships, an invention ascribed to David Bushnell, an American, in 1777. His attempt to destroy H.M.S. *Cerberus* failed. The action of Fulton's torpedoes was successful in Britain 1805; but their use was declined by the government. Torpedo shells ignited by electricity were successfully employed in the war in the United States, 1861-5. On 4 Oct. 1865, Messrs. M'Kay & Beardslee tried them at Chatham before the duke of Somerset and others. An old vessel, the Terpsichore, was speedily sunk. Torpedoes, made by professor (aft. sir Frederick) Abel, of Woolwich, were tried in May, 1866. A torpedo invented by Mr. Wightman and an Austrian, tried and reported successful at Sheerness; an old hulk was sunk, 8 Oct. 1870. Torpedoes to be ignited from a distance by an electric battery are now made at Woolwich. A Turkish monitor in the Danube was blown up by a torpedo (see *Russo-Turkish war, II.*), 26 May, 1877. The investigations were continued by Mr. Godwin-Austen, 1840; by the Torquay Natural History Society, and by a committee of the British Association, 1865, by whom the results were published. Mr. William Pengelly, of Torquay, was actively engaged in the researches.

TORTOLA, see *Virgin Isles*.

TORTURE was only permitted by the Romans in the examination of slaves. It was applied to heretics by the Roman catholic clergy, and was used in England so late as 1640 (when Archer, who took part in an attack on Laud's palace, was racked), and in Scotland until 1690. The trial by torture was abolished in Portugal, 1776; in France, by Louis XVI., in 1789; and in Sweden by Gustavus III., 1786. General Picton was convicted of allowing Louisa Calderon to be tortured in Trinidad, in accordance with the old law of the island, at his trials, 21 Feb. 1806, and 11 June, 1808.

TOUL, the Roman *Tulli Leucorum*, a fortified town on the Moselle, N.E. France, one of the most ancient in the empire. The city and diocese acquired great privileges from Charles the Simple, 925, when it was united with the German empire. It was reunited with France, 1552. The fortifications, begun in 1238, were rebuilt and enlarged in 1700, according to the plans of Vauban. After a vigorous resistance to the Germans, commencing 14 Aug. 1870, Toul surrendered with its garrison of 3000 men, 23 Sept., when the town was burning in twenty-three places. The Germans thus acquired an uninterrupted railway communication to Paris.

TOULON, the ancient *Telo Martius* (S. France), an important military port. It was taken by the constable of Bourbon, 1524, and by the emperor Charles V. in 1536. In 1707 it was bombarded by the allies, both by land and sea, by which almost the whole town was reduced to a heap of ruins, and several ships burned; but the allies were at last obliged to raise the siege. It surrendered 27 Aug. 1793, to the British admiral, lord Hood, who took possession both of the town and shipping, in the name of Louis XVII., under a stipulation to assist in restoring the French constitution of 1789. A conflict took place between the English and French forces, when the latter were repulsed, 15 Nov. 1793. Toulon was retaken by Bonaparte, 19 Dec., when great cruelties were exercised towards such of the inhabitants as were supposed to be favourable to the British.—A naval battle off this port was fought 11 Feb. 1744, between the English under Mathews and Lestock, against the fleets of France and Spain: in this engagement the brave captain Cornewall fell. The victory was lost by a misunderstanding between the English admirals. Mathews was afterwards dismissed for misconduct. See *Cholera*, 1884.

TOULOUSE, the ancient TOLOSA (S. France), founded about 615 B.C.; was the capital of the Visigothic kings in A.D. 419; and was taken by Clovis in 508. The dukes of Aquitaine reigned here, 631-761. A university was established here, 1229, and a parliament, 1302. The inquisition was established here to extirpate heretics, 1229. The troubadours, or rhetoricians of Toulouse, had their origin about 850, and consisted of a fraternity of poets, whose art was extended throughout Europe, and gave rise to the Italian and French poetry; see *Troubadours*. The allied British and Spanish army entered this city on 12 April, immediately after the BATTLE OF TOULOUSE, fought between the British Peninsular army under lord Wellington, and the French led by marshal Soult, 10 April, 1814. The French were forced to retreat, after twelve hours' fighting. Neither of the commanders knew that Napoleon had abdicated the throne of France. Population, 1886, 147,617; 1891, 148,220.

TOULOUSE. The county was created out of the kingdom of Aquitaine by Charlemagne, in 778. It enjoyed great prosperity till the dreadful war of the Albigenses (*which see*), when the count Raymond VI. was expelled, and Simon de Montfort became count. At his death, in 1218, Raymond VII. obtained his inheritance. His daughter Jane and her husband, Alphonse (brother of Louis IX. of France), dying without issue, the county of Toulouse was united to the French monarchy in 1271. A large part of Toulouse destroyed by an inundation of the Garonne; St. Cyprien like a sepulchre; 23 June, 1875.

TOURAINE, the garden of France, was conquered by the Visigoths about 480. It was ceded to Geoffroy count of Anjou, 1044, and thus became the property of the Plantagenet kings of England. It was seized by Philip Augustus in 1203, and was made a duchy by John, 1360. It was finally united to the crown on the death of the duke of Anjou, 1584.

TOURNAMENTS, or JOUSTS, were martial sports of the ancient cavaliers. Tournament is derived from the French word *tourner*, "to turn round." Tournaments were frequent about 890; and were regulated by the emperor Henry I., about 919. Tournaments were introduced into England early in the 12th century; prohibited by Henry II., but revived by Richard I., his son. Solemn tournaments were held by Edward III., 25 Sept. 1329, in London; and 19 Jan. 1344, at Windsor; and by Richard II. in Smithfield, London, 10 Oct. 1319; and also by Henry VIII., in May 1513. The Lateran council published an article against their continuance in 1136. Henry II. of France, in a tilt with the comte de Montgomery, had his eye struck out, an accident which caused the king's death in a few days, 29 June, 1559. Tournaments were then abolished in France.—A magnificent feast and tournament, under the auspices of Archibald, earl of Eglintoun, took place at Eglintoun castle, 29 Aug. 1839, and the following week: many of the visitors (among whom was the late emperor of the French) assumed the characters of ancient knights, lady Seymour, aft. duchess of Somerset, being the "Queen of Beauty." She died 14 Dec. 1884. Among the festivities at the marriage of prince Humbert, at Turin, was a tournament, 24 April, 1868. Tournaments held at the Agricultural hall, London, N. (for benefit of soldiers' widows, &c.), 21 June *et seq.* 1880; 11 June, 1887; 14 June, 1888; 20 June, 1889; 18 June, 1890; 26 May, 1891; 17 May, 1892; 25 May, 1893; 31 May, 1894: 23 May, 1895; 28 May, 1896. Opened by the prince of Wales, 27 May, native Indian (22) officers and other colonials present, prizes given by the duchess of Connaught, 10 June, 1897; 19 May, 1898; (amount received 28,992*l.* 3*s.* 7½*d.*). In Oct. 1883, these tournaments were organized as "Royal Military Tournaments" for development of skill in arms in the army. Tournaments on Woolwich common, directed by col. Curzon, 21-23 Aug. 1889.

TOURNAY (S. Belgium) was very flourishing till it was ravaged by the barbarians in the 5th century. It has sustained many sieges. Taken by the allies in 1709, and ceded to the house of Austria by the treaty of Utrecht; but the Dutch were allowed to place a garrison in it, as one of the barrier towns. It was taken by the French under general La Bourdonnaye, 8 Nov. 1792. Several battles were fought near Tournay in May, 1793, and May, 1794. Population, 1890, 35,403.

TOURNIQUET (from *tourner*, to turn), an instrument for stopping the flow of blood into a limb, by tightening the bandage employed in amputations, is said to have been invented by Morelli at the siege of Besançon, 1674. J. L. Petit, in France, invented the screw tourniquet in 1718.

TOURS, an ancient city, central France, near which Charles Martel gained a great victory over the Saracens, and saved Europe, 10 Oct. 732, and from which he acquired the name of *Martel*, signifying *hammer*. This conflict is also called the battle of Poitiers. When Paris was invested by the Germans, M. Crémieux and several of the members of the French government of defence went to Tours, together with the representatives of foreign powers, 18 Sept. 1870. On 9 Oct. these were joined by Gambetta, minister of the interior, afterwards of war (who escaped from Paris by a balloon, 7 Oct.). In consequence of the defeat of the army of the Loire near Orleans, the government removed to Bordeaux, 11 Dec.

TOWERS. That of Babel, the first of which we read, built in the plains of Shinar (*Gen.* xi.) 2247 B.C.; see *Babel*. The Tower of the Winds at Athens, built 550 B.C. The Tower of Pharos (see *Pharos*), 280 B.C. The *round towers* in Ireland were the only structures of stone found at the arrival of the English, 1169, except some buildings in the maritime towns founded by the Danes. These towers are tall hollow pillars, nearly cylindrical, but narrowing towards the top, pierced with lateral holes to admit the light, and covered with conical roofs. Fifty-six of them still remain, from 50 to 130 feet high; see *Pisa*.

TOWER OF LONDON. The tradition that Julius Cæsar founded a citadel here (about 54 B.C.) is very doubtful. A royal palace, consisting of no more than what is now called the White Tower, which appears to have been first marked out by William the Conqueror, 1076, was commenced in 1078, and completed by his son, William Rufus, who, in 1098, surrounded it with walls and a broad deep ditch. Several succeeding princes made additions to it, and king Edward III. built the church.

In 1638, the old White Tower was rebuilt; and under king Charles II. it was thoroughly repaired, 1680-5, and a great number of additional buildings made to it. Here are the Armoury, Jewel-office, and various other divisions and buildings of peculiar interest. Here took place many executions of illustrious persons, and many murders (king Henry VI., 1471; king Edward V. and his brother, 1485; sir Thomas Overbury, 1613). The armoury and 280,000 stand of arms, &c., were destroyed by fire, 30 Oct. 1841. The "New Buildings" in the Tower were completed in 1850. See *Blood;* for *Tower-Subways*, see *Thames*. The more recent constables of the Tower have been the duke of Wellington, lord Combermere, and sir John Burgoyne. Sir George Pollock, constable Oct. 1871, died 6 Oct. 1872; sir Wm. Gomm, 31 Oct. 1872, died 15 March, 1875; sir Charles Yorke, April, 1875, died 20 Nov. 1880; sir W. Fenwick Williams, April, 1881; gen. sir R. J. Dacres, Aug. 1881, died 6 Dec. 1886; lord Napier of Magdala, Dec. 1886, died 14 Jan. 1890; gen. sir Daniel Lysons, 3 March, 1890, died 29 Jan. 1898, aged 81; gen. sir Frederick C. Stephenson, 2 March, 1898.

TOWN HOLDINGS in Great Britain and Ireland. A committee appointed in 1886-9 (Mr. Lewis Fry, sir H. James, sir Wm. Marriott and others), to enquire into terms of occupation, facilities for purchase by tenants, rating, improvements, &c. The report issued 13 July, 1889, was stated to be a compromise.

TOWTON (Yorkshire), where a sanguinary battle was fought, 29 March, 1461, between the houses of York (Edward IV.) and Lancaster (Henry VI.), to the latter of whom it was fatal, and on whose side more than 37,000 fell. Edward issued orders to give no quarter, and the most merciless slaughter ensued. Henry and his queen, Margaret, fled to Scotland; and Edward IV. was settled on the throne.

TOXOPHILITES (from *toxon*, a bow, and *philos*, a lover), a society established by sir Aston Lever in 1781. The Toxophilites formed a division of the Artillery Company about 1784-1803. In 1834 they took grounds in the inner circle of Regent's-park, and built the archery lodge. They possess a very curious piece of plate, given by Catherine, queen of Charles II., to be shot for by the Finsbury archers, of whom the Toxophilites are the representatives.

TRACT SOCIETIES. The Society for Promoting Christian Knowledge was founded in 1698; the Religious Tract Society, London, in 1799; and other similar societies since.

TRACTARIANISM, a term applied to certain opinions on church matters propounded in the "Tracts for the Times," of which ninety numbers were published, 1833-41. The principal writers were the revs. Dr. E. Pusey, J. H. Newman, J. Keble, J. Froude, and I. Williams—all of the university of Oxford; see *Puseyism*. The tracts (specially No. 90, ascribed to rev. J. H. Newman) were condemned by the authorities at Oxford, 15 March, 1841.

TRACTION-ENGINES were used on common roads in London in 1860, but afterwards restricted. In Aug. 1862, one of Bray's traction-engines conveyed through the city a mass of iron which would have required 29 horses; see *Road-steamers*, and *Railways*.

First meeting 7 Oct. 1885; final report issued Feb. 1887. The majority refer to over-production, rise in value of gold, and in regard to agriculture, fall of prices, as probable causes; improved condition of the working classes noted, Jan. 1887.

TRADE AND PLANTATIONS, BOARD OF. Cromwell seems to have given the first notions of a board of trade: in 1655 he appointed his son Richard, with many lords of his council, judges, and gentlemen, and about twenty merchants of London, York, Newcastle, Yarmouth, Dover, &c., to meet and consider by what means the trade and navigation of the republic might be best promoted. *Thomas's Notes of the Rolls*. Charles II., on his restoration, established a council of trade for keeping a control over the whole commerce of the nation, 1660; he afterwards instituted a board of trade and plantations which was remodelled by William III. This board was abolished in 1782; and a new council for the affairs of trade on its present plan was appointed, 2 Sept. 1786.

The parliamentary recommendation in 1880 to appoint a "minister of trade and commerce" was dropped by Mr. Gladstone in March, 1881.

TRADES MUSEUMS. The formation of one was undertaken in 1853, jointly by the commissioners of the Great Exhibition of 1851, and the Society of Arts. The animal department was opened 17 May, 1855, when a paper on the mutual relations of trade and manufactures was read by professor E. Solly. The contents of this museum were removed to the South Kensington Museum, which was opened 24 June, 1857. The French "Conservatoire des Arts et Métiers" was established 1795.

TRADE, NATIONAL CHAMBER OF, inaugural meeting at Manchester, Mr. R. Thornton-Varley elected president (from 8,000 to 10,000 members), 24 Nov. 1897.

TRADES UNIONS defined as "continuous associations of wage-earners, for the purpose of maintaining or improving the conditions of their employment," were gradually formed after the repeal of the "combination laws" in 1825, to withstand the undue influence of capital and competition. As trades unions formed for maintaining the rate of wages, &c. are not recognised by law, a commission (including lord Elcho, Thomas Hughes, and others, with sir Wm. Erle as chairman) was appointed to enquire into their constitution, 14 Feb. 1867, and an act to facilitate their proceedings was passed 5 April following. Their reports were issued during the year, disclosing the existence of murderous practices, with great intimidation; see *Sheffield*, and *Manchester*. An act to protect union funds from embezzlement was passed in 1869. A trade union act passed 29 June, 1871, amended by act passed 30 June, 1876. To counteract the influence of trades unions, the National Federation of Employers was formed Dec. 1873; see *Employers*, and *Workingmen*. Trades unions were legalised in France in 1884. Trades unions in the United States, N.A., previously local, were legalised in 1845, and were gradually consolidated and became very powerful. See *United States*. "History of Trade Unionism," published 1894, and "Industrial Democracy," by Sidney and Beatrice Webb, published 1897.

TRAFALGAR (Cape S. Spain), off which a great naval victory was gained by the British, under Nelson, over the combined fleets of France and Spain, commanded by admiral Villeneuve and two Spanish admirals, 21 Oct. 1805. The enemy's force was eighteen French and fifteen Spanish vessels, all of the line: that of the British, twenty-seven ships. After a protracted fight, Villeneuve and the other admirals were taken, and nineteen of their ships captured, sunk, or destroyed. Nelson was killed, and admiral Collingwood succeeded to the command. Nelson's ship was the *Victory;* and his last signal was, "England expects every man will do his duty;" see *Nelson*. The day specially celebrated in London, 21 Oct. 1896, *et seq*. TRAFALGAR-SQUARE, London, begun 1829; completed 1845. Mr. Mann stated, in 1855, that there were about forty of these schools in different parts of the country.

TRAJAN'S COLUMN (in Rome), erected 114, by the Roman senate and people, to commemorate his victories, and executed by Apollodorus. It was built in the square called the *Forum Trajanum;* it is of the Tuscan order, and from its base, exclusive of the statue and pedestal, is 127½ feet high.

TRAM-ROADS. The name is probably derived from being made of *trams* or bars of wood; the statement that it was derived from Mr. Benjamin Outram (the father of sir James Outram, the Indian general), who improved the colliery railroads about 1800, is very doubtful. The iron tram-road from Croydon to Wandsworth was completed on 24 July, 1801. Street railways or tramways for omnibuses drawn by horses, previously established by Mr. Train in New York, were opened by him at Birkenhead, Cheshire, 30 Aug. 1860, and at Bayswater, London, 23 March, 1861. (See *Ireland*, 1868.) A street railway bill was rejected by the house of commons in April, 1861. Several of these railways existed for a time in various parts of the metropolis in 1861, but were all taken up in 1862. An act to facilitate the

construction of tramways passed 9 Aug. 1870. Tramways from Brixton to Kennington, and from Whitechapel to Bow, were opened 9 May, 1870; and others since. Their introduction into the city was much recommended but opposed, March-May, 1873. Dividend of the North Metropolitan tramways company, 8 per cent. Aug. 1876. TRANSFIGURATION. The change of Christ's appearance on Mount Tabor, in the presence of Peter, James, and John, A.D. 32 (*Matt.* xvii.). The feast of the Transfiguration, kept on 6 Aug., was instituted in the East before 700, and seems to have been observed in the West as early as 450. Pope Calixtus III. in 1456 issued a bull making it a "feast of obligation" to be generally observed in honour of the defeat of the Turks at Belgrade in that year.

TRANSPORTATION, see *Banishment*. Judges were given the power of sentencing offenders to transportation "into any of his majesty's dominions in North America," by 18 Charles II. c. 3 (1666), and by 4 Geo. I. c. 11 (1718). Transportation ceased in 1775, but was revived in 1786. The reception of convicts was successfully refused by the Cape of Good Hope (in 1849) and by the Australian colonies (1864). Transportation, even to West Australia, where labour is wanted, ceased after a few years, through the fierce opposition of the eastern colonies. In consequence of the difficulty then experienced in transporting felons, 16 & 17 Vict. c. 99 was passed to provide other punishment, namely, penal servitude, empowering her majesty to grant pardon to offenders under certain conditions, and licences to others to be at large: such licences being liable to be revoked if necessary; and many have been. These licences are termed "tickets of leave." The system is said to have originated in Australia under the superintendence of captain Maconochie. It was much assailed in Oct. and Nov. 1862, on account of violent crimes being traced to *ticket-of-leavers*; and was modified by the Penal Servitude Act, 1864; and the Prevention of Crimes Acts, 1871 and 1879. It is now considered successful. See *Crime*.

TRANSUBSTANTIATION, the doctrine of the "real presence." That the bread and wine in the Eucharist are changed into the very flesh and blood of Christ by the consecration, was broached in the days of Gregory III. (731), and accepted by Amalarius and Radbertus (about 830), but rejected by Rabanus Maurus, Johannes Scotus Erigena, Berengarius, Wicliffe, and others. In the Lateran council, held at Rome by Innocent III., the word "Transubstantiation" was used to express this doctrine, which was decreed to be incontrovertible; and all who opposed it were condemned as heretics. This was confirmed by the council of Trent, 18 Jan. 1562. John Huss, Jerome of Prague, and other martyrs of the reformation, suffered for denying this dogma; which is renounced by the church of England (28th article), and by all protestant dissenters. The declaration against transubstantiation, invocation of the saints, and the sacrifice of the mass, on taking any civil office, was abolished by an act passed 25 July, 1867; see *Sacrament*.

Luther maintained the doctrine of *con-substantiation*, viz., that after consecration the body and blood of Christ are substantially present in the bread and wine. He was opposed by Bucer, Carlstadt, Zwingle, and others (termed sacramentarians), who asserted that the Lord's supper is only a commemorative rite.

TRANSYLVANIA, an Austrian province, was part of the ancient Dacia (*which see*). In 1526, John Zapoly rendered himself independent of the emperor Ferdinand I. by the aid of the Turks. His successors ruled with much difficulty till Jan. 1699, when the emperor Leopold I., by the treaty of Carlowitz, finally incorporated Transylvania into the Austrian dominions. The Transylvanian deputies did not take their seat in the Austrian parliament till 20 Oct. 1863. A decree for the convocation of the Transylvanian diet was issued 12 Sept. 1865. The inhabitants are about 1,100,000 ignorant Roumans, 1,500,000 Saxon colonists, and 550,000 Magyars, the last being the ruling class. The union of Transylvania with Hungary in 1848, which has caused much discontent, was ratified by the Transylvanian diet, 25 Dec. 1866.

Serious agrarian riots at Föeldvar suppressed with bloodshed, 27 June, 1888.

TRAPPISTS. The first abbey of La Trappe in Normandy was founded, in 1140, by Rotrou, comte de Perche. The present order of Trappists owes its origin to the learned Jean le Bouthillier de la Rancé (editor of *Anacreon* when aged 14), who renounced the world, and sold all his property, giving the proceeds to the abbey of La Trappe, to which he retired in 1662, to live there in great austerity. After several efforts he succeeded in reforming the monks, and in establishing a new rule, which commands silence, prayer, reading, and manual labour, and which forbids study, wine, fish, &c. Rancé was born in 1620, and died in 1700. The Trappists' new building was consecrated in Aug. 1833.

A number of these monks, driven from France in the revolution of 1790, were received by Mr. Weld, of Lulworth, Dorsetshire, who gave them some land to cultivate and a habitation, where they remained till 1815. This order was charged with rebellion and conspiracy in France, and sixty-four English and Irish Trappists were shipped by the French government at Paimbœuf, 19 Nov., and were landed from the *Hebé*, French frigate, at Cork, 30 Nov. 1831. They established themselves at Mount Melleray, county of Waterford.

TRASIMENE, see *Thrasymene*.

TRAUTENAU (Bohemia). On 27 June, 1866, the first corps of the army of the crown-prince of Prussia seized Trautenau, but was defeated and repulsed by the Austrians under Gablenz; on the 28th, the Prussians defeated the Austrians with great loss.

TRAVELLERS' CLUB (Pall-mall), established in 1815. A member must have "travelled out of the British islands to a distance of at least 500 miles from London, in a direct line."

TRAVELLING IN ENGLAND. In 1707 it took in summer one day, in winter nearly two days, to travel from London to Oxford (55 miles). In 1817 the journey was accomplished in six or seven hours. By the Great Western Railway express (63 miles) it is done in 1½ hour. In 1828, a gentleman travelled from Newcastle to London (273 miles) inside the best coach in 35 hours, at an expense of 6*l.* 15*s.* 3*d.* or 6*d.* per mile (including dinner, &c.). In 1857, the charge of the Great Northern railway (275¼ miles) first-class express (6 hours) was 50*s.* 9*d.*

TRAWLING. Deep-sea fishing with a boat (sometimes driven by steam) having a very large net attached to it, and thereby catching the fish which mostly live at the bottom of the sea; principally practised on the N.E. coast of Britain.

Commissions reported in 1864 and since, that trawling was not injurious to the supply of fish as suggested; but another commission, with scientific advice, reported in Feb. 1885, that there was some ground for the fishermen's complaints.

TREAD-MILL, an invention of the Chinese, to raise water for the irrigation of the fields. The complicated tread-mill introduced into the prisons of Great Britain is the invention of Mr. (afterwards sir William) Cubitt, of Ipswich. It was erected at Brixton gaol, 1817, and soon afterwards in other large prisons.

TREASON, see *High Treason*. PETTY TREASON (a term abolished in 1828, defined by the statute of 25 Edw. III. 1352) was a wife's murder of her husband; a servant's murder of his master; and an ecclesiastical person's murder of his prelate or other superior. *Misprision* of treason, knowledge and concealment of the crime, punishable with forfeiture of goods and imprisonment for life.

TREASON-FELONY. By the Crown and Government Security Act, 11 Vict. c. 12 (1848), certain treasons heretofore punishable with death were mitigated to felonies, and subjected to transportation or imprisonment. The Fenians in Ireland were tried under this act; see *Trials*, 1865.

TREASURER OF ENGLAND, LORD HIGH, the third great officer of the crown, a lord by virtue of his office, having the custody of the king's treasure, governing the upper court of exchequer, and formerly sitting judicially among the barons. The first lord high treasurer in England was Odo, earl of Kent, in the reign of William I. This great trust is now confided to a commission, and is vested in five persons, called "lords commissioners for executing the office of lord high treasurer," and of these the chancellor of the exchequer is usually one; the first lord being usually the premier; see *Administrations*, for a succession of these officers. Sir Stafford Northcote (aft. Earl of Iddesleigh) was first lord of the treasury and not premier, 24 June, 1885, as was Mr. W. H. Smith, 26 July, 1886; see *Salisbury Administrations*. A third lord of the treasury (Mr. Stansfeld) was appointed, Dec. 1868, succeeded by Mr. W. H. Gladstone, Dec. 1869.

The first of this rank in IRELAND was John de St. John, Henry III. 1217; the last, William, duke of Devonshire, 1766; vice-treasurers were appointed till 1789; then commissioners till 1816, when the revenues of Great Britain and Ireland were united.

The *first* lord high treasurer of SCOTLAND was sir Walter Ogilvie, appointed by James I. in 1420; the *last*, in 1641, John, earl of Traquair, afterwards commissioners were appointed.

TREASURER OF THE CHAMBER, formerly an officer of great consideration, and always a member of the privy council. He discharged the bills of all the king's tradesmen, and had his office

in Cleveland-row, in the vicinity of the royal palace. His duties were transferred and the office suppressed at the same time with the offices of master of the great wardrobe and cofferer of the household in 1782. *Beatson.*

TREATIES. A formal and written treaty made in England with any foreign nation was entered into at Kingston between Henry III. and the dauphin of France (then in England and leagued with the barons), 11 Sept. 1217. The first commercial treaty was with Guy, earl of Flanders, 2 Edw. 1274; the second with Portugal and Spain, 1308. *Anderson.* The chief treaties of the nations of Europe will be found described in their respective places: the following forms an index; see *Coalitions*, *Commerce*, *Leagues*, &c. TREBIA, now *Trebbia*, a river in North Italy, near which Hannibal defeated the Roman consul Sempronius, 218 B.C.: and Suvarrow, after a struggle, defeated the French marshal Macdonald and compelled him to retreat, 17-19 June, 1799.

TREBIZOND, a port of Asia Minor in the Black Sea, was colonised by the Greeks, and became subject to the kings of Pontus. It enjoyed self-government under the Roman empire, and when the Latins took Constantinople in 1204, it became the seat of an empire which endured till 1461, when it was conquered by the Turks under Mahomet I. Population in 1885, 45,000.

TREES in London. Many were planted by John Evelyn in the Mall, St. James's, &c. He recommended this in his "Fumifugium," published 1661. The planting of rows of trees in suburban roads began in 1875.

TREES OF LIBERTY were planted in Paris and other parts of France during the revolutionary eras, 1790 and 1848. These trees were cut down in Paris in Jan. 1850, when riots ensued, put down by the military.
The celebrated tree *Février*, planted in 1789 near the National Library, Paris, was felled early in 1884.
English arboricultural society founded at Hexham in 1880, about 420 members in 1897. Annual meetings.

TRENT (the ancient Tridentum), in the Tyrol, belongs to Austria. The council held here is reckoned in the Roman catholic church as the 18th general council. Its decisions have been implicitly received as the standard of faith, morals, and discipline in that church. It first sat 13 Dec. 1545, and continued (with interruptions) under pope Paul III., Julius III., and Pius IV. to 4 Dec. 1563; its last sitting (the 25th). A jubilee in relation to this council was celebrated in June, 1863. Trent was several times taken during the French war. Population, 1890, 21,653.

At the council was decreed, with anathemas: the canon of scripture (including the apocrypha), and the church its sole interpreter; the traditions to be equal with scripture; the seven sacraments (baptism, confirmation, the Lord's supper, penance, extreme unction, orders, and matrimony); transubstantiation; purgatory; indulgences; celibacy of the clergy; auricular confession, &c.

TRENT STEAMER, see *United States*, Nov.-Dec. 1861.

TREVECCA, see *Cheshunt*.

TRÈVES, or **TRIER**, the Roman Treviri, in Rhenish Prussia, was a prosperous city of the Gauls 12 B.C. The emperor Gallienus held his court here A.D. 255. The church of St. Simeon dates from the 4th century. Trèves was made an electorate in the 14th century, and became subject to the archbishop in 1585. Councils held here, 385-1423. The archbishopric is said to have been founded before the 7th century and to be the oldest in Germany. After various changes, Trèves was acquired by Prussia, June 1815. In 1844 much excitement was occasioned by miracles said to have been wrought by a "Holy Coat" in the cathedral. The coat was exhibited to thousands, Aug., Sept. 1891. Population, 1890, 36,162.

"*TRIA JUNCTA IN UNO*" (three joined in one), the motto of the knights of the military order of the Bath, signifying "faith, hope, and charity;" see *Bath*.

TRIAL AT BAR, signifies by the whole court or a plurality of judges. This plan was adopted at Bristol after the riots in 1832; also at O'Connell's trial, 1844; and arranged for the trial of the claimant of the Tichborne estates for perjury, in April, 1873. See *Juries*.

TRIALS. Regulations for conducting trials were made by Lothaire and Edric, kings of Kent, about 673 to 680. Alfred the Great is said to have begun trial by jury; but there is good evidence of

such trials before his time. Arrangements were made for more speedy trials by "the Winter Assizes Act," 1876. See *Appeal.*

[The bishop had refused to institute the rev. Mr. Gorham into the living of Brampton-Speke, in Devonshire, alleging want of orthodoxy in the plaintiff, who denied that spiritual regeneration was conferred by baptism; the court held that the charge against the plaintiff of holding false doctrine was proved, and that the bishop was justified in his refusal. Mr. Gorham appealed to the Judicial Committee of the Privy Council, which pronounced its opinion (8 March, 1850) that "the doctrine held by Mr. Gorham was not contrary or repugnant to the declared doctrine of the church of England, and that Mr. Gorham ought not, by reason of the doctrine held by him, to have been refused admission to the vicarage of Brampton-Speke." This decision led to subsequent proceedings in the three courts of law, successively, for a rule to show cause why a prohibition should not issue, directed to the judge of the Arches court, and to the archbishop of Canterbury, against giving effect to the judgment of her majesty in council. The rule was refused in each court, and in the end Mr. Gorham was instituted into the vicarage in question, 7 Aug. 1850.]

TRIBUNES OF THE PEOPLE (*Tribuni Plebis*), magistrates of Rome, first chosen from among the commons to represent them, 494 B.C., when the people, after a quarrel with the senators, had retired to Mons Sacer. The first two tribunes were C. Licinius and L. Albinus; but their number was soon after raised to five, and 37 years after to ten, which number remained fixed. The office was annual, and as the first had been created on the 4th of the ides of December, that day was chosen for the election. In A.D. 1347, Nicolo di Rienzi assumed absolute power in Rome as tribune of the people, and reformed many abuses; but committing extravagances, he lost his popularity and was compelled to abdicate. He returned to Rome and was assassinated, 8 Sept. 1354.

TROY WEIGHT. The Romans introduced their ounce, our avoirdupois ounce, into Britain. The present ounce was brought from Grand Cairo into Europe, about the time of the Crusades, 1095, and was first adopted at Troyes, a city of France, whence the name. It is used to weigh gold, silver, and precious stones. The Troy weight, Scots, was established by James VI. (our James I.) in 1618; see *Standard.*

Troyes was taken by the allied armies, 7 Feb.; retaken by Napoleon, 23 Feb.; and again taken by the allies, 4 March, 1814.

TRUCE OF GOD (*Frera* or *Treuga Dei*), a term given to a cessation of the private feuds and conflicts so general during the middle ages all over Europe, said to have been strongly advocated by the bishop of Aquitaine, in 1032. The clergy strenuously exerted their influence for the purpose. A synod at Roussillon, 1027, decreed that none should attack his enemy between Saturday evening (at nones) and Monday morning (at the hour of prime). Similar regulations were adopted in England, 1042 (sometimes Friday and Wednesday being chosen for the time). The truce of God was confirmed by many councils of the church, especially the Lateran Council, in 1179.

TRUCK SYSTEM of paying workmen's wages in goods (sold at "*tommy shops*") instead of money, was prohibited by parliament in 1831 By the Truck act a commission to inquire into its alleged prevalence was appointed; act passed 10 Aug. 1870; amended 1887 and 1896.

TRUMPET. Some of the Greek historians ascribe the invention of the trumpet to the Tyrrhenians, and others to the Egyptians. It was in use in the time of Homer. First torches, then shells of fish sounded like trumpets, were the signals in primitive wars. *Potter.* The Jewish feast of trumpets was appointed 1490 B.C. (*Lev.* xxiii. 24). Offa, king of Mercia, is said to have had trumpets sounded before him when travelling, about A.D. 790. The *speaking trumpet* is said to have been used by Alexander the Great in 335 B.C.; improved by Kircher in A.D. 1652; by Salland, 1654; and philosophically explained by Morland, 1671.

An act to provide for the foundation of a bishopric of Truro passed 11 Aug. 1876, and money sufficient for its endowment having been subscribed, the see was constituted by order in council, 9 Dec. same year. Act amended in 1887. Truro was made a city, Aug. 1877; absorbed into the county, 1885. Population, 1881, 10,619; 1891, 11,131.

TUAM (W. Ireland). St. Jarlath, the son of Loga, who lived about 501, is looked upon as the first founder of the cathedral of Tuam, though the abbey is said to have been founded in 487. The church was anciently called *Tuaim-da-Gualand* In 1151, Edan O'Hoisin was the first archbishop, at least the first who received the pall, for some of his predecessors are sometimes called bishops of Connaught, and sometimes archbishops, by Irish historians. The see of Mayo was annexed to Tuam in 1559. Tuam is valued in the king's books, by an extent returned *anno* 28 Eliz., at 50*l.* sterling per annum. *Beatson.* It ceased to be archiepiscopal, conformably with the statute 3 & 4 Will. IV., 1833; and is now a bishopric only, to which Killala and Achonry, a joint see, has been added; see *Archbishops*. New protestant cathedral of St. Mary, consecrated by the bishop, the Hon. Dr. Charles B. Bernard, 9 Oct. 1878.

TUBERCULOSIS, a disease caused by the development of tubercles, small masses of diseased matter in the lungs (phthisis or consumption), in the face and other parts (lupus).

Dr. Robert Koch, of Berlin, announced, in 1882, that he had discovered a minute organism, named *bacillus tuberculosis*, to whose action he attributed the diseases. In the autumn of 1890, he reported his invention of a lymph (*see below*, 15 Jan. 1891), by the injection of which into the system, as in vaccination, he hoped to cure the diseases. In Berlin he made many experiments on tuberculosed guinea-pigs and human beings, with some success in respect to lupus, but not to phthisis. Dr. Koch was much honoured by the emperor, and was aided by the state. Dr. Koch's full account of his method was published in the *British Medical Journal*, London, 15 Nov., and other papers. Medical men flocked to Berlin from all parts of the world, to obtain the lymph. Exaggerated cases of successful application were published, and it soon appeared that time was required to test the efficacy of the remedy. Much discussion ensued. Dr. Koch, on 15 Jan. 1891, published the statement that his lymph, named *tuberculine*, was a glycerine extract from the pure cultivation of the tubercle bacilli.

TUBULAR BRIDGES. The Britannia Tubular Suspension Bridge, then the most wonderful enterprise in engineering in the world, was constructed, 1846-50 (Mr. R. Stephenson and Mr. Fairbairn, engineers), about a mile southward of the Menai Strait Suspension Bridge.*

On the Britannia rock, near the centre of the Menai Strait, the surface of which is about ten feet above low water level, is built a tower two hundred feet above high water (commenced building, May, 1846), and on which rest two lines of tubes or hollow girders strong enough to bear their weight and laden trains in addition, the ends resting on the abutments on each shore; each tube being more than a quarter of a mile in length. The height of the tube within is thirty feet at the Britannia tower, diminishing to twenty-three feet at the abutments. The lifting of these tubes to their places was a most gigantic operation, successfully performed, 27 June, 1849

* The Britanma tubular bridge was intended to supply the place of one of the finest bridges in the kingdom; and the railway, of which the tubular bridge forms a part, is in like manner a substitute for one of the finest mail-coach roads ever constructed. The road from London to Holyhead has been long regarded as the highway from the British metropolis to Dublin; and the late Mr. Telford was applied to by the government to perfect this route by the London and Holyhead mail-coach road, which he did by erecting a beautiful suspension bridge over the river Conway and over the Menai Strait; commenced in July, 1818, and finished in Jul 1825.

TUGENDBUND ("league of Virtue"), formed in Prussia soon after the peace of Tilsit, June, 1807, ostensibly for relieving the sufferers by the late wars, and for the revival of morality and patriotism. Its head-quarters were at Königsberg. It excited the jealousy of Napoleon, who demanded its suppression in 1809. It was dissolved at the peace in 1815.

TUILERIES (Paris), the imperial palace of France, commenced by Catherine de Medicis, after the plans of Philibert de l'Orme, 1564; continued by Henry IV.; and finished by Louis XIV. This palace was stormed by the mob, 10 Aug. 1792; and ransacked in the revolutions of July, 1830, and Feb. 1848. Louis Napoleon made it his residence in 1851, and greatly renovated it. The restoration of the Tuileries (much injured by fire by the communists, May 1871) was determined on, Oct. 1872; not proceeded with. The ruins were sold for 32,200*l.* to M. Picard, 4 Dec. 1882.

TULCHAN BISHOPS; a mere nominal episcopacy set up in Scotland by the regent Morton, who, with other nobles, absorbed the larger portion of the revenue, 1572-3. *Tulchan* was a stuffed calf's skin set before a cow to facilitate milking.

TULIPS, indigenous in the east of Europe, came to England from Vienna about 1578. It is recorded in the register of Alkmaer in Holland, that in 1639, 120 tulips, with the offsets, sold for 90,000 florins: and that one, called the *Viceroy*, sold for 4203 guilders! The States stopped this ruinous traffic. The *tulip tree, Liriodendron tulipifera*, was brought to England from America, about 1663.

TUNBRIDGE WELLS (Kent). The springs were discovered, it is stated, by Dudley, lord North, who, when very ill, was restored to health by the use of the waters, 1606. The wells were visited by the queens of Charles I. and II., and by queen Anne, and soon became fashionable. Population, 1881, 24,119; 1891, 27,895.

TUNGSTEN (also called wolfram and scheelium), a hard whitish brittle metal. From tungstate of lead, Scheele in 1781 obtained tungstic acid, whence the brothers De Luyart in 1786 obtained the metal. In 1859 it was employed in making a new kind of steel.

TUNIS (N. Africa) stands nearly on the site of Carthage. Tunis was besieged by Louis IX., of France, who died near it 25 Aug. 1270. It remained under African kings till taken by Barbarossa, for Solyman the Magnificent, 1531. Barbarossa was expelled by the emperor Charles V., when 10,000 Christian slaves were set at liberty, June, 1535. The country was recovered by the Turks under Selim II. 1575. The bey of Tunis was first appointed in 1574; Tunis was reduced by admiral Blake, on the bey refusing to deliver up the British captives, 1655. The Hussein dynasty was founded 1705. In July, 1856, the bey agreed to make constitutional reforms. He died 22 Sept. 1859; and his brother and successor Mohamed-es-Sadok took the oath of fidelity to the constitution. He died, and was succeeded by his brother Sidi Ali, 28 Oct. 1882. Tunis is now under French protection.

TUNNAGE AND POUNDAGE were ancient duties levied on every tun of wine and pound of other goods, imported or exported, and were the origin of our "customs." They commenced in England about 1346, and were granted to the kings for life, beginning with Edward IV. Charles I. gave great offence by levying them on his own authority, 1628. They were granted to Charles II. for his lifetime, 24 June, 1660. By the act 27 Geo. III. c. 13, these and other duties were repealed, 1787, and a new arrangement of excise and customs was introduced.

TUNNELS, for drainage, are ancient. The earliest tunnel for internal navigation was executed by M. Riguet, in the reign of Louis XIV., at Bezières in France. The first in England was by Mr. Brindley, on the duke of Bridgewater's canal, near Manchester, about 1766. Project of the Gravesend tunnel, 1800—the report upon it, 1801. The Thames Tunnel was projected by Mr. Brunel in 1823, and opened for foot passengers, 25 March, 1843; see *Thames Tunnel*. Innumerable tunnels have been made for railways. The railway tunnel at Liverpool was completed in the middle of 1829, lit up with gas, and exhibited once a week. On the London and Birmingham railway there are eight tunnels (the Primrose-hill, Watford, Kilsby, &c.), their total length being 7336 yards. *Smiles*. It was computed by Mr. Fowler, that there were 80 miles of tunnels in the United Kingdom in 1865, which cost about 6,500,000*l.*, at the average of 45*l.* a yard; see *Alps* [Mont Cenis, etc.] and *Thames*.

TURIN, the ancient Augusta Taurinorum in Piedmont, capital of the Sardinian States, and of the kingdom of Italy, till 1864, when it was superseded by Florence. Its importance dates from the permanent union of Savoy and Piedmont in 1416. The French besieged this city; but prince Eugène defeated their army, and compelled them to raise the siege, 7 Sept. 1706. In 1798, the French republican army took possession of Turin, seized all the strong places and arsenals of Piedmont, and obliged the king and his family to remove to the island of Sardinia. In 1799, the French were driven out by the Austrians and Russians; but the city and all Piedmont surrendered to the French, June 1800. In May 1814, it was restored to the king of Sardinia; see *Italy*, 1864. Here prince Humbert was married to his cousin Margherita amidst

great rejoicing, 22 April, 1868. The monument to Cavour was inaugurated, 8 Nov. 1873. An exhibition opened by the king, 25 April, 1880; another opened by the king, 1 May, 1898. See *Treaties*, and *Italy*, 1884. Population, 1890, 320,808.

TURKESTAN, called by the Persians Turan, formerly Independent Tartary (*which see*), the original country of the Turks, in Central Asia, was reached by Alexander, 331 B.C., and has since undergone many changes, forming successively part of the empires of Genghis Khan and Tamerlane (see *Tartary*). For Eastern or Chinese Turkestan, see *Kashgaria*; for Western, see *Bokhara* and *Khiva*. The Russians gradually encroached on this country; on 14 Feb. 1865, a new province, Turkestan, was created by decree, and gen. Kauffmann made governor, 26 July, 1867; died 16 May, 1882. The rule of the czar accepted by the chief tribes at Merv (*which see*), announced 8 Feb. 1884. Gen. Dukhofski appointed gov.-gen. of Turkestan and the Transcaspian territory, April, 1898.

TURKEY. The Turks were originally a tribe of Tartars; but, by incorporation with the peoples they have conquered, have become a mixed race. About 760, they obtained possession of a part of Armenia, called from them Turcomania. They gradually extended their power; but in the 13th century, being harassed by other Tartar tribes, they returned to Asia Minor. The Turkish empire till 1878 comprehended the almost independent principalities of Moldavia and Wallachia, Servia, and Montenegro, the hereditary vice-royalty of Egypt, and Tunis. The Turkish quadrilateral fortresses were Shumla, Varna, Silistria, and Rustchuck. The population of the empire was estimated in 1887 at 32,978,100; (immediate Possessions, 21,633,000, tributaries and protectorates, 11,345,100); in Europe, 8,987,000; Asia, 16,174,100; Africa, 7,817,000; 1897 at 39,500,000*l*. By the treaty of Berlin (13 July, 1878) Turkey is said to have

	Square Miles.	Inhabitants.	Mohammedans.
Ceded to Roumania	5,935	246,000	142,000
,, Servia	4,326	264,000	75,000
,, Montenegro	1,549	40,000	9,000
,, Austria	15	2,000	—
,, Greece (?)	5,300	750,000	40,000

If we exclude the provinces "indefinitely" to be occupied by Austria, Bulgaria, and Eastern Roumelia, there remain to Turkey in Europe only 74,790 square miles, with 4,779,000 inhabitants, of whom 2,521,500 are Mohammedans. In Armenia Russia takes 10,000 square miles, with about 350,000 inhabitants. Cyprus, entrusted to the keeping of England, has an area of 3,584 square miles, and 186,173 inhabitants in 1881. Thessaly ceded to Greece by convention, 24 May; treaty signed, 2 July, 1881. See *Greco-Turkish War*, May, 1897.
